LETTER OF TRANSMITTAL

September, 1940

*To His Excellency, THE HONORABLE CULBERT L. OLSON,
Governor of the State of California.*

SIR: I have the honor to herewith transmit Bulletin No. 119 of the Division of Mines, of the Department of Natural Resources, being the annual report of the statistics of the mineral production of California.

The remarkable variety, total values, and wide distribution of many of our minerals revealed herein show California's importance as a producer of commercial minerals among the states of the Union.

Respectfully submitted.

RICHARD SACHSE,
Director, Department of Natural Resources.

INTRODUCTION

It is the endeavor of the staff of the State Division of Mines (formerly State Mining Bureau), in these annual reports of the mineral industries of California, to so compile the statistics of production that they will be of actual use to producers and to those interested in the utilization of the mineral products of our State, while at the same time keeping the individual's data confidential. In addition to the mere figures of output, we have included descriptions of the uses and characteristics of many of the materials, as well as a brief mention of their occurrences.

The compilation of accurate and dependable figures is an extremely difficult undertaking, and the State Mineralogist takes the opportunity of here expressing his appreciation of the cooperation of the producers in making this work possible. A fuller appreciation of the value of early responses to the requests sent out in January will result in earlier completion of the manuscript. Statistics lose much of their value if their publication is unnecessarily delayed.

Some of the data relative to properties and uses of many of the minerals herein described are repeated from preceding reports, as it is intended that this annual statistical bulletin shall be somewhat of a compendium of information on California's commercial minerals and their utilization.

WALTER W. BRADLEY,
State Mineralogist.

MINERAL INDUSTRY, CALIFORNIA, 1939

DATA COMPILED FROM DIRECT RETURNS FROM PRODUCERS IN ANSWER TO INQUIRIES SENT OUT BY THE CALIFORNIA STATE DIVISION OF MINES, FERRY BUILDING, SAN FRANCISCO, CALIFORNIA

CHAPTER ONE

The total value for the mineral output for California for the year 1939 was \$352,462,564, being a decrease of \$27,982,412 from the total of 1938 which was \$380,444,976, the decrease being due to petroleum. There were sixty-two different mineral substances, exclusive of a segregation of various stones grouped under gems; and all fifty-eight counties of the State contributed to the list.

As revealed by the following, the salient features of 1939 compared with the previous year were: The metal and industrial-materials groups showed increases in total value, while fuels, structural materials, and salines showed a decline. Of the year's mineral output gold showed the greatest increase in value, followed in turn by copper, brick and hollow building-tile, tungsten ore, quicksilver, lime, magnesite, cement, limestone, borates, talc and soapstone, silica, and salt; while those showing decreases in amount and value were petroleum, potash, miscellaneous stone, and mineral water. Returned to the commercial list after several years absence were antimony, molybdenum, titanium ores, and strontium.

Of the fuels, petroleum showed a decrease in value of \$31,995,487 and a decrease in amount from 249,395,763 barrels to 224,253,110 barrels of crude. There were no marked changes in prices of crude from June, 1936, until May, 1940. Natural gas showed an increase in amount and a decrease in value from 332,358,439 M. cu. ft. worth \$22,310,755 to 340,754,804 M. cu. ft. valued at \$21,551,646.

Of the metals all materials under this grouping showed an increased value of output with the exception of platinum and iron ore. The gold production increased from 1,311,129 to 1,435,264 fine ounces, and in value from \$45,889,515 to \$50,234,240; copper from 1,613,491 lbs. worth \$158,122, to 8,390,215 lbs. worth \$872,582; tungsten from 46,107 units worth \$786,860 to 74,110 units worth \$1,153,735; quicksilver from 12,171 flasks worth \$846,497 to 11,201 flasks worth \$1,102,563; and silver from 2,590,804 fine ozs. worth \$1,674,863 to 2,599,139 fine ozs. worth \$1,764,264. The 1939 gold value was the greatest since 1856 while that of chromite, antimony, and tungsten ore was the greatest since 1919; that of molybdenum ore being greater than the total of all previous output.

Of the structural materials; lime increased in value and amount from 70,578 tons worth \$683,403 to 87,288 tons worth \$849,122 and its largest annual yield; cement from 10,561,037 barrels worth \$15,502,574 to 10,984,033 barrels worth \$15,616,219; increased values were also registered by brick and hollow building-tile; granite; marble and sandstone. Miscellaneous stone declined in value from \$11,734,038 to

\$10,316,787; also decreased values were shown by bituminous rock and slate.

In the industrial group the total value increased from \$5,027,093 to \$5,622,449, with gypsum, limestone, pumice and volcanic ash, silica (quartz and glass sand), and tale and soapstone reaching all-time highs in annual production. The total value of the saline group decreased from \$14,279,949 to \$13,178,499, although borax, iodine, salt, and soda registered increases in total value for the year, with soda exceeding all previous annual output.

By Substances.

The following table shows the comparative yield of mineral substances of California for 1938 and 1939, as compiled from the returns received at the State Division of Mines, San Francisco, in answer to inquiry sent to producers:

Substance	1938		1939		Increase + Decrease— Value
	Amount	Value	Amount	Value	
Antimony ore.....			150 tons	\$4,552	\$4,552+
Bentonite.....	9,374 tons	\$113,164	11,284 tons	138,854	25,690+

Unapportioned.....		\$7,755,381		\$6,601,039	1,154,342-
Total values.....		\$380,444,976		\$352,462,564	
Net decrease.....					\$27,982,412

* Included under 'Unapportioned.'

^a Includes onyx and travertine.

^b Includes macadam, crushed rock, ballast, rubble, riprap, sand and gravel.

^c Includes alum, barite, bituminous rock, bromine, carbon dioxide, calcium chloride, calcium silicate, chromite, diatomite, dolomite, feldspar, garnets, iodine, iron ore, lithia, magnesite, mica, potash, pyrite, sillimanite group, serpentine, sulphur, paving blocks, tube-mill pebbles.

^d Includes barite, bromine, calcium chloride, calcium silicate, carbon dioxide, coal, diatomite, garnets, iodine, lithia, magnesite, manganese ore, molybdenum, potash, paving blocks, pyrite, sillimanite group, strontium, titanium, tube-mill pebbles.

By Counties.

The following table shows the comparative value of the mineral production of the various counties in the State for the years 1938 and 1939:

County	1938	1939
Alameda.....	\$2,531,600	\$2,778,587
Alpine.....	11,123	7,328
Amador.....	3,880,444	4,314,573

Total Mineral Production of California, by Years, Since 1887.

The following tabulation gives the total value of mineral production of California by years since 1887, in which year compilation of such data by the State Mining Bureau (now Division of Mines) began. At the side of these figures have been placed the values of the most important metal and nonmetal items—gold and petroleum.

In the same period copper made an important growth beginning with 1897 following the entry of the Shasta County mines, and later

Plumas County. Cement increased rapidly from 1902, while crushed rock, sand and gravel as a group paralleled the cement increase. Quicksilver has been up and down. Mineral water and salt have always been important items, but the values fluctuate. Borax has increased materially since 1896. War-time increases, 1915-1918, were shown by chromite, copper, lead, magnesite, manganese, silver, tungsten and zinc. Most of these have since declined, though silver, structural materials and copper increased in 1920-1924, also lead and magnesite in 1923; lead and zinc in 1925; zinc in 1926, with silver declining; an increase in quicksilver in 1927-1928, with declines in other metals and by petroleum. Natural gas showed a steady increase from 1907, and in 1928-1933 its value was second only to petroleum.

In 1929 the annual output of gold was the smallest since its discovery. From 1929 to 1939 there was a rapid increase in gold production, due in part to the raise in its price per ounce.

Total Mineral Production of California, by Years, Since 1887

Year	Total value of all minerals	Gold, value	Petroleum, value
1887.....	\$19,785,868	\$13,588,614	\$1,357,144
1888.....	19,469,320	12,750,000	1,380,666
1889.....	16,681,731	11,212,913	368,048
1890.....	18,039,666	12,309,793	384,200

CHAPTER TWO

FUELS

Among the most important mineral products of California are its fuels. This subdivision includes coal, natural gas, and petroleum, the combined values of which make up practically 70 per cent of the State's entire mineral output for the year 1939.

There are deposits of peat known in several localities in California, small amounts of which are used as a fertilizer, and in stock-food preparations, but none has yet been recorded as utilized for fuel.

Comparison of values during 1938 and 1939 is shown in the following table:

Substance	1938		1939		Increase + Decrease— Value
	Amount	Value	Amount	Value	
Coal	275 tons	\$1,650	*	*	* +
Natural gas	332,358,439 Mcu. ft.	22,310,755	340,754,804 M cu. ft.	\$21,551,646	759,109—
Petroleum	249,395,763 bbls.	258,354,343	224,253,110 gals.	226,358,856	31,995,487—
Total value		\$280,666,748		\$247,910,502	
Net decrease					32,754,596

* Included under unapportioned.

COAL

Bibliography: State Mineralogist Reports VII, XII-XV (inc.), XVII, XIX-XXVIII (inc.), XXVI, XXXI, XXXV. U. S. Geol. Surv., Bulletins 285, 316, 431, 471, 581; Ann. Rept. 22, Pl. III.

The coal production in California during 1939 is concealed under the 'Unapportioned' item so as not to reveal the output of a single property in Contra Costa County. The material mined 1938 came from a single property each, in Amador, San Benito, and Trinity counties. This coal was consumed by the local market and also used on the property for camp purposes, power and forge, to carry on regular operations and development work.

Total Coal Production of California.

The very considerable output of coal in the years previous to 1883 was almost entirely from the Mount Diablo district, Contra Costa County. Later the Tesla mine in Corral Hollow, Alameda County, was an important producer for a few years. Stone Canyon, Monterey County, was also an important producer for a short time, and there has been some coal shipped from properties in Amador, Fresno, Orange, Riverside, Siskiyou and Trinity counties. The following tabulation gives the annual tonnages and values, according to available records:

Coal Output and Value, by Years

Year	Tons	Value	Year	Tons	Value
1861	6,620	\$38,065	1901	150,724	\$401,772
1862	23,400	134,550	1902	88,460	248,622
1863	43,200	248,400	1903	93,026	265,383
1864	50,700	291,525	1904	79,062	376,494

1896	70,649	161,335	1936	370	1,815
1897	87,449	196,255	1937	269	2,933
1898	143,045	337,475	1938	275	1,650
1899	160,941	420,109	1939	*	*
1900	176,956	535,531			
			Totals	5,267,910	\$23,388,639

The tonnages in the above table for the years 1861-1866 (incl.) are taken from the U. S. Geological Survey, "Mineral Resources of the U. S., 1910," p. 107. The values assigned for the years previous to 1883 are those given by W. A. Goodyear (Mineral Res., 1882, pp. 93-94), being an average of \$5.75 per ton. From 1887 to date the figures are those of the California State Mining Bureau.

* Annual details concealed under 'Unapportioned.'

NATURAL GAS

Bibliography: State Mineralogist Reports VII, X, XII, XIII, XIV, XXIX, XXXV. Bulletins 3, 16, 19, 69, 73, 89. Monthly Summary Oil and Gas Supervisor, Dec., 1919; Aug., 1922; Mar., 1923; Mar. and Apr., 1926.

Statistics on the production of natural gas in California are in a considerable degree difficult to arrive at, as much of it that is utilized directly at the wells for heating, lighting, and driving gas engines is not measured. Hence, it is necessary to approximate the output of many of the operators in the oil fields, estimated on the number of lights, and on the number and horsepower of gas engines and steam boilers thus operated. The figures here given are for gas utilized locally and also that sold for distribution to consumers; and we consider are not over-estimated, particularly in the seven oil-producing counties. It must be remembered that some of our important oil fields are removed many miles from the site of any other industry, and that the gathering of small amounts of gas and transporting it for any considerable distance may not always be profitable, nor is it often possible to have pipe-line

facilities available to handle the gas accompanying the early gas production in newly developed fields. Wherever feasible, casing-head gas is used in driving gas engines for pumping and drilling, and in firing the boilers of steam-driven plants.

Actual Production of Natural Gas—How Disposed of in California—1939

County	Production, M cubic feet	Stored, M cubic feet	Unconserved wasted, M cubic feet	Utilized, M cubic feet
Fresno.....	55,161,057		675,972	54,485,085

Totals.....	376,490,122	6,011,001	29,724,317	340,754,804

Production and Value.

There is a rather wide variation in prices quoted for natural gas because a considerable part is used directly in the field for driving gas engines and firing boilers, and is therefore not measured nor sold. Such companies as have placed a valuation on the gas that was thus used in 1939 gave from 1.5¢ to 45¢ per 1000 cu. ft. at the well. From the totals shown in the tabulation following herein, the average value for all fields in 1939 works out at approximately 6.32¢ per M cu. ft. Approximately 7000 cu. ft. of gas is equal to one barrel of oil in heating value, and is so accounted for by many operators. In driving gas engines, about 4000 cu. ft. per 24 hr. are consumed by a 25-h.p. engine, and 63,700 cu. ft. per day for heating a 70-h.p. steam boiler, which figures have been utilized in compiling this report, in those cases where gas was not metered.

Utilized Production of Natural Gas in California, 1939

County	M cubic feet	Value
Fresno.....	54,485,085	\$2,799,981
Kern.....	73,950,832	5,191,065
Kings.....	46,054,600	2,526,102

Orange.....	17,445,378	1,185,021
San Joaquin.....	10,432,837	834,694
Santa Barbara.....	4,594,932	307,732
Solano.....	6,608,782	604,868
Ventura.....	41,098,418	2,038,936
Butte, Humboldt, Lake, Mendocino, Monterey, Sacramento, Sutter, Tulare, Yolo*	2,405,974	186,162
Totals.....	340,754,804	\$21,551,646

* Combined to conceal the output of individual operators in each.

The above showed an increase in total amount with a decrease in value as compared with the figures of the previous year, which were 332,358,439 M cu. ft. worth \$22,310,755. Los Angeles County led all others in the yield of natural gas during 1939, followed in turn by Kern, Fresno, Kings, and Ventura counties. Increased outputs were

reported by Kern, Kings, Los Angeles, San Joaquin, Solano, and Sutter counties; while a decrease was shown by all other producing counties.

Natural Gas Production in California Since 1888.

The production of natural gas in California by years since 1888 is given in the following table. The first economic use of natural gas in California was from the famous courthouse well at Stockton, bored in 1854-1858. Beginning about 1883 and for several succeeding years, a number of gas wells were brought in around Stockton, and later at Sacramento. Natural gas was known in a number of other localities, and occasionally utilized in a small way, notably at Kelseyville in Lake County, and in Humboldt County near Petrolia and Eureka, but there are no available authentic records of amounts or values previous to the year 1888. The most important developments in the commercial production of natural gas have been coincident with developments in the oil fields, by utilizing the casing-head gas as well as that from dry-gas wells.

Natural Gas Production in California Since 1888

Year	M cubic feet	Value	Year	M cubic feet	Value

* Quantity, in part, estimated, where values only were reported.

^b Tabulations published previously to 1933 included values of CO₂, now shown under "Industrial Materials."

Gasoline from Natural Gas.

More or less gas usually accompanies the petroleum in the old fields, and such gas carries varying amounts of gasoline. A total of 91 plants were in operation in 1939 recovering gasoline by compression or absorption from this 'casing-head' gas. After the gasoline is extracted the remaining 'dry gas' so far as practicable is taken into pipe lines, by which it is distributed to consumers, both domestic and commercial.

A total of 580,655,012 gallons of natural-gas gasoline valued at \$32,370,041 was reported from all fields in California by 91 plants

during 1939, as compared with 576,673,643 gallons worth \$34,150,247 from 95 plants in 1938. In 1939 there was also a total of 33,953,424 gallons of liquefied petroleum gas produced for chemical manufacturing, industrial, and domestic fuel. The 1939 output was as follows:

County	No. plants	Gallons	Value
Fresno.....	1	60,232,811	\$3,450,939
Kern.....	20	60,910,320	3,418,247

The usual recoveries of gasoline from natural gas vary from $\frac{1}{2}$ gal. to 3 gal. per 1000 cu. ft. of gas handled, the average being about 1 gal. per 1000 cu. ft. The U. S. Bureau of Mines Report by Knudsen¹ gives the average recovery for 1939 as 1.571 gallons per 1000 cu. ft. of gas treated. His figures show the following production by methods:

	M cubic feet natural gas treated	Gallons of gasoline recovered	Recovery gallons per M cu. ft.

PETROLEUM

Bibliography: State Mineralogist Reports IV, VII, X, XII, XIII, XXIX, XXXI, XXXIII-XXXV. Bulletins 3, 11, 16, 19, 31, 32, 63, 69, 73, 82, 84, 89, 118. Reports of Oil and Gas Supervisor 1915 to date (issued in monthly chapters since April, 1919, to June, 1929, and quarterly from then on). U. S. Geol. Surv. Bulletins 213, 285, 309, 317, 321, 322, 340, 357, 398, 406, 431, 471, 541, 581, 603, 621, 623, 653, 691. Prof. Papers 116, 117. "American Petroleum; Supply and Demand"; Amer. Petr. Inst., 1925.

The crude petroleum produced in California during 1939 amounted to a total of 224,253,110 barrels having a value of \$226,358,856 at the well. This was a decrease in both amount and value compared with the 1938 output which was 249,395,763 barrels worth \$258,354,343.

This total of quantity is compiled from the monthly production reports filed by the operators with the State Oil and Gas Supervisor.

The question of the value of the crude oil yield at the well is a difficult one to settle with exactitude principally because a large part of the output is not sold until after refining. The large refiners are also large producers of crude oil which they send direct from well to plant, hence much of the crude oil is not sold as such.

The value used in the statistical reports of the State Mining Bureau and the Division of Mines from 1914 to 1927 (inc.) was derived

¹Knudsen, E. T., The Petroleum Situation in the Pacific Coast Territory (Monthly for 1939), U. S. Bureau of Mines.

from an average of actual sales of crude oil of all grades in each field of the State and their average applied to the total yield of each respective field. The 1929-1933 values, used by the Division of Mines, were obtained by using the production of crude oil by gravities produced in each field¹ and applying an average of current price quotations for crude oil at the well as compiled by California Oil and Gas Association.

The value given to the 1934-1938 petroleum output by this department was obtained by using the average gravity oil for each field, to which was applied the average quotation for the year of said grade oil.

TABLE A
Production and Value of Crude Oil by Counties

County	1938		1939	
	Barrels	Value	Barrels	Value
Fresno.....	20,784,106	\$26,201,849	15,411,056	\$18,077,169
Kern.....	66,093,496	58,803,255	58,893,865	48,664,001

Ventura.....	1.396	.771	.849	.838	.944	.901	.971	1.050	1.102	1.090
State averages.....	\$1.195	\$0.753	\$0.807	\$0.831	\$0.913	\$0.970	\$0.986	\$0.997	\$1.038	\$1.009

For several years previous to 1919, the State average value per barrel at the well for crude oil as determined by the statistical returns was noted to practically coincide with the quotations during the same years for 23° gravity oil in the San Joaquin Valley fields. In 1919 and since, the average values have worked out at figures corresponding to quotations up to, in one year as high as 28° oil, due to the large yield of high-gravity oils from the new fields in the Los Angeles-Orange counties area.

TOTAL PETROLEUM PRODUCTION OF CALIFORNIA

The presence of oil seepages and springs in Los Angeles and Ventura counties was known and utilized in a small way early in the history of California. Some also was shipped to refineries at San Francisco from Santa Barbara and Humboldt counties. In the light of present-day developments, the following reference to the previous year's production of oil and its future prospects as expressed by the San Francisco Bulletin of January 8, 1866, is strikingly prophetic even though skeptical:

"It is possible that the small quantity received (40,000 or 50,000 gallons in 1865) may be the forerunner of many millions which will, at some future time, lubricate the wheels of commerce and set a trade at work excelling in variety any that has thus far been known on this coast. At present, however, we admit to being a little skeptical about the assumption of the astute Professor Silliman that California will be found to have more oil in its soil than all the whales in the Pacific Ocean."

According to Hanks,¹ in 1874 production amounted to 36 bbl. per day from natural flows in Pico Cañon (Newhall), and at Sulphur Mountain (Ventura County), the oil being of 32° gravity average.

"Work was commenced in Pico Canyon in 1875 by drilling three shallow wells with spring pole, all of which yielded oil at depths of from 90 to 250 feet. Actual work of development commenced with steam machinery in 1877."²

In 1877 Pico averaged 40-50 bbl. daily, and Ventura 80 bbl. daily. In 1878, there was some production (at 60 bbl. per day, for a time) from wells in Moody Gulch, near Los Gatos, Santa Clara County, the oil being of 46° Baumé.

Playa Del Rey Oil Field, Los Angeles County

¹ Hanks, Henry G., Report IV of State Mineralogist, p. 298, 1884.

² *Idem.* p. 301.

The first wells in the Coalinga, Fresno County, and Summerland, Santa Barbara County, fields were drilled in 1890, but Coalinga did not make its influence felt conspicuously on the state's annual output until 1903. The Summerland yield never has been large. The Salt Lake field near Los Angeles began production in 1894 and in 1897 reached over a million barrels annually.

In the Kern County fields, the first well was drilled in Sunset in 1891, Midway in 1900, McKittrick in 1892, Kern River in 1899. The Sunset-Midway district attained a yield of over 4,000,000 bbl. in 1909, and over 20,000,000 bbl. in 1910. Kern River field produced over 3,000,000 bbl. in 1901.

The first well in the Santa Maria-Lompoc group, Santa Barbara County, was drilled in 1901, and the district advanced to a yield of over 3,000,000 bbl. annually in 1905.

The Whittier-Fullerton field in Los Angeles and Orange counties became an important factor in 1902. The Montebello field, Los Angeles County, was the conspicuous addition in 1918-1919; and Elk Hills, Kern County, with Huntington Beach and Richfield, Orange County, in 1920. In 1921, the new fields added were Long Beach and Santa Fe Springs, Los Angeles County; in 1922, Torrance field in Los Angeles County, and Wheeler Ridge field in Kern County; but the production from the large number of new wells started in these new Los Angeles County fields did not reach its peak until August and September, 1923. Dominguez (Compton) came in during 1923; followed by Rosecrans and Inglewood in 1924. Ventura recorded important additions to its producing area in 1925 and 1926. Seal Beach, Orange County, and Mt. Poso, Kern County, were the new fields added in 1926; Round Mountain, Kern County, and Rincon, Ventura County, were the new fields added in 1927; with Potrero in Los Angeles County, Elwood in Santa Barbara County and Kettleman Hills in Kings County in 1928.

During 1929 Playa del Rey was added to the oil fields in Los Angeles County, and more recently a number of others have been added in Fresno, Los Angeles, Kern, and Santa Barbara.

The effect of the advent of these various fields to the producing column will be noted in the tabulation herewith, by years:

Specific Gravity of Oils Produced.

The proportion of heavy and light oil produced in the various fields is shown in Table E, on page 26, for which we are indebted to the Standard Oil Company. Specific gravities in California range from 8° Baumé in the Casmalia field, Santa Barbara County, to 60° in Kettleman Hills, Kings County.

California crude oils are all essentially of asphalt base, with a few notable exceptions. In the following localities are wells yielding crudes containing both asphalt and paraffine constituents: Oil City field, Coalinga; a few deep wells in East Side field, Coalinga; a considerable part of the Ventura County field; Western Minerals area, south of Maricopa; Wheeler Ridge, Kern County.

Oil in "Storage."

Field, refinery, pipe-line and tank-farm stocks of crude and refined products in the Pacific Coast¹ territory totaled 151,935,248 barrels December 31, 1939, as compared with 157,684,289 barrels on December 31, 1938. The total decrease in stock over the preceding year was 5,749,041 barrels.

Utilization of California Crude Oil.

Most of the crude oil produced in California is sent to storage reservoirs at tank farms near the oilfields and from these reservoirs by pipelines to the refineries, the larger ones of which are located in the vicinity of Los Angeles and on San Francisco Bay.

During 1939 the crude oil consumed in California according to the U. S. Bureau of Mines² was 192,804,000 barrels sent to the still at the refineries; 21,813,000 barrels to Pacific foreign shipment; 947,000 barrels to intercoastal shipments; 8,881,000 barrels were either consumed as fuel or added to residuum and nongasoline-bearing crude; and 1,031,000 barrels to domestic market and loss not accounted for elsewhere.

The production of petroleum products during 1939 is shown in Table F:

TABLE F

Commodity	Amount in barrels
Crude petroleum to stills.....	192,804,000
Natural gas gasoline, including liquid petroleum gas.....	14,443,000
Gasoline.....	80,096,000
Kerosene.....	3,788,000
Lubricating oils and greases.....	3,295,000
Gas oil and Diesel oil.....	27,918,000
Residuum and non-gasoline-bearing crudes ^a	77,934,000
Asphalt and road oil.....	6,216,000
Refinery losses and still gas production.....	7,300,000
Total petroleum (net) ^b	207,247,000

^a Includes 8,881,000 bbls. of heavy crude oil.

^b Total of crude oil and natural gas gasoline.

Operating Data.

The following tabulation (Table G) is compiled from data published by the State Division of Oil and Gas,¹ semiannually, and here combined to show the entire year's operations for all fields. The districts are the geographical subdivisions as administered by that Division and which are outlined on the accompanying map.

It will be noted that the State average yield of oil per-well-per-day was 50.0 barrels for the first six months of 1939 and 47.4 barrels for the second. This is somewhat higher than the figures 41.8 barrels average for December derived from American Petroleum Institute data as shown in Table D, on a previous page, due in part at least, to the fact that the latter is on a full-time basis, whereas the Division's figures allow for shut-down time.

¹ Summary of Operations—California Oil Fields; Division of Oil and Gas, Fifteenth Annual Report of State Oil and Gas Supervisor, Vol. 35, No. 1, July, Aug., Sept., 1939, and No. 3, Jan., Feb., March, 1940.

TABLE G

CHAPTER THREE

METALS

Bibliography: Reports of State Mineralogist I-XXXVI (inc.). Bulletins 5, 6, 18, 23, 27, 36, 50, 57, 76, 78, 85, 92, 95, 108. Spurr and Wormser, "Marketing of Metals and Minerals." See also under each metal.

The total value of metals produced in California during 1939 was \$55,375,873. Chief among these is and always has been gold, followed by silver, tungsten ore, quicksilver, copper, iron ore, lead, chromite, platinum group metals, and molybdenum ore.

A comparison of the 1938 output with that of the 1939 output is afforded by the following table:

Substance	1938		1939		Increase + Decrease - Value
	Amount	Value	Amount	Value	
Antimony.....			150 tons	\$4,552	\$4,552+
Chromite.....	982 tons	\$10,864	3,936 tons	52,673	41,809+
Copper.....	1,613,491 lbs.	158,122	8,390,215 lbs.	872,582	714,460+

Unapportioned.....		141,406	---	130,609	110,797-
Total values.....		\$49,590,262	---	\$55,375,873	---
Net increase.....		---	---	---	\$5,785,612

* Included under "unapportioned."

^b Includes manganese, molybdenum and titanium.

ALUMINUM

Bibliography: Report XVIII, p. 198, XXXIV. Bulletins 38, 67. U. S. Geol. Surv., Min. Res. of U. S.

To date there has been no commercial production of aluminum ore in California. Only a single authenticated occurrence of bauxite has thus far been noted in this state, being in Riverside County southeast of Corona, but as yet undeveloped.

Minerals containing aluminum are abundant, the most widely distributed being the clays. There are only two, however, thus far of consequence commercially, in the production of the metal: bauxite (to which may be added the related hydrated oxides, hydrargillite and diaspore) and cryolite. Cryolite is found in commercial quantities only in south Greenland, and was formerly the only ore of aluminum used, being still employed as a flux in the extraction of the metal. Bauxite has been for some years the most important source of aluminum and its salts. Its color varies from gray to red, according to the amount of iron present, the composition ranging usually between the following limits:

Al_2O_3 , 30%–60% ; Fe_2O_3 , 3%–25% ; SiO_2 , 0.5%–20% ; TiO_2 , 0.0–10%. Besides its reduction to the metal bauxite is also utilized in the manufacture of aluminum salts, refractories, alundum (fused alumina) for use as an abrasive, and in the refining of oil.

ANTIMONY

Bibliography: State Mineralogist Reports VIII, X, XII–XV (inc.), XVII, XXII, XXIII, XXV–XXVII (inc.), XXXI, XXXIV. Bulletins 38, 91.

During 1939 there were shipments of antimony ore in California, coming from properties in Inyo, Kern, and San Bernardino counties and amounted to 150 short tons valued at \$4,552. The above was the first output of antimony ore since 1928.

Pure antimony metal and manufactured antimony compounds are of considerable importance as pigments in the ceramic industry. The most important use of the metal, commercially, is in various alloys, particularly type-metal (with tin and lead), babbitt (with tin and copper), and britannia metal (with tin and copper). An alloy of 6% antimony and 94% lead is being extensively used in making battery plates for storage batteries for automobiles, airplanes and radio apparatus.

Present New York quotations (July 18, 1940) are around 16.5¢ per pound for Chinese (duty paid) and 14¢ for domestic antimony.

Antimony Production in California, by Years.

The production of antimony ore in California by years since 1887 has been as follows:

Year	Tons	Value	Year	Tons	Value
1887.....	75	\$15,500	1902.....		
1888.....	100	20,000	1915.....	510	\$35,666
1889.....			1916.....	1,015	64,793
1893.....	50	2,250	1917.....	158	18,786
1894.....	150	6,000	1918.....		
1895.....	33	1,485	1925.....	*26	770
1896.....	17	2,320	1926.....		
1897.....	20	3,500	1927.....	20	590
1898.....	40	1,200	1928.....	20	761
1899.....	75	13,500	1929.....		
1900.....	70	5,700	1939.....	150	4,552
1901.....	50	8,350			
			Totals.....	2,579	\$205,732

* Annual details concealed under 'Unapportioned.'

ARSENIC

Bibliography: Reports XVIII, XXIII, XXV, XXX, XXXIII, XXXV. Bulletin 67. U. S. G. S., Min. Res. of U. S.

Arsenic is found in a number of localities in California in the mineral arsenopyrite (FeAsS), which is frequently gold bearing; and in scorodite ($\text{FeAsO}_4 + 2\text{H}_2\text{O}$), an oxidation product of arsenopyrite. The occurrence of realgar (AsS) has also been noted.

Except for a small output in 1924, there has been no commercial recovery of arsenic from California ores. There having been only a single operator, the figures are concealed under the 'Unapportioned' item.

BERYLLIUM

Bibliography: State Mineralogist Report XXVII, XXXV. Eng. & Min. Jour.-Press, Vol. 118, No. 8, p. 285, Aug. 23, 1924. U. S. Bureau of Mines Information Circular 6190.

Beryllium is a metal resembling aluminum closely in its chemical character. It has a specific gravity of 1.85, is almost as hard as quartz (will scratch glass) and will take a high polish. The use of beryllium as a metal is still more or less in the experimental stage because the cost of extracting the metal from its ores almost makes it prohibitive and the present sources of supply of the ore are limited. Not until such a time when deposits can be found that will assure a definite supply and metallurgical costs are such as to justify its use, will the metal be found in common use.

There are a number of beryllium minerals, but none have been found in commercial quantities, except beryl, which is a beryllium-aluminum silicate. The chief use at present for ground beryl is as an addition to porcelain products, where it reduces the coefficient of expansion. Beryllium metal is difficult to separate from aluminum.

Present (May 30, 1940) quotations for beryllium ore are per ton in carload lots, minimum 10 per cent BeO, \$30; minimum 12 per cent BeO, \$35, f.o.b. mine.

Beryl occurs in California in the pegmatite dikes of the tourmaline gem district in northern San Diego and northwestern Riverside counties; and an occurrence has recently been noted in western Inyo County, but the quantity is as yet unproved. Thus far there have been no commercial shipments of beryl from California except for gem purposes (the pink and aquamarine varieties).

BISMUTH

Bibliography: State Mineralogist Report XXXV. Bulletins 38, 67, 91. Am. Jour. Sci., 1903, Vol. 16.

Several bismuth minerals have been found in California, notably native bismuth and bismite (the ochre) in the tourmaline gem district in San Diego and Riverside counties near Pala. Other occurrences of bismuth minerals, including the sulphide, bismuthinite, have been noted in Inyo, Fresno, Nevada, Tuolumne, San Bernardino, and Mono counties, but only in small quantities. The only commercial production recorded was 20 tons valued at \$2,400 in 1904, and credited to Riverside County.

The uses of bismuth are somewhat restricted, being employed principally in the preparation of medicinal salts, and in low melting-point or cliché alloys. These alloys are utilized in automatic fire sprinkler systems, in electric fuses, and in solders.

The present quotation (May 9, 1940) for bismuth is \$1.25 per pound, in ton lots for the refined metal.

CADMIUM

Bibliography: U. S. Geol. Surv., Min. Res. of U. S., 1908, 1918.

During 1917 and 1918, cadmium metal was recovered by the electrolytic zinc plant of the Mammoth Copper Company in Shasta County.

It was shipped in the form of 'sticks' and amounted to a total of several thousand pounds for the two years, the exact figures being concealed under 'Unapportioned.' That was the first, and thus far the only, commercial production of cadmium recorded from California ore. Cadmium occurs there associated with zinc sulphide, sphalerite. Cadmium also occurs in the Cerro Gordo Mines, Inyo County, associated with smithsonite (zinc carbonate).

Cadmium is produced in the United States in two forms—metallic cadmium and the pigment, cadmium sulphide. The principal use of the metal is in low-melting point, or cliché alloys, and its salts are utilized in the arts, medicine, and in electroplating. The sulphide is employed as a paint pigment, being a strong yellow, which is unaffected by hydrogen sulphide gas from coal smoke. It is also employed in coloring glass and porcelain. Cadmium cliché metal is stated to be superior to the corresponding bismuth alloy, for making stereotype plates. Cadmium is also used in bronze telegraph and telephone wires, and gives some promise of being utilized in electroplating.

The present quotation (May 16, 1940) for cadmium is 80¢ per pound for the refined metal.

CHROMITE

Bibliography: State Mineralogist Reports IV, XII, XIII, XIV, XV, XVII, XVIII, XXI-XXIX (inc.), XXXI, XXXIV. Bulletins 38, 76, 91. Preliminary Report 3. U. S. G. S., Bull. 430. Min. & Sci. Press, Vol. 114, p. 552.

During 1939 there were shipments of chromite or chrome iron ore in California amounting to 3,936 short tons recalculated to a basis of 45% Cr_2O_3 valued at \$52,673. The 1939 output showed an increase in amount and value as compared with that of 1938 which was 982 short tons worth \$10,864, and was the largest annual yield since 1919. The 1939 shipments came from properties in Del Norte, El Dorado, Plumas, Siskiyou, and Tuolumne counties.

Occurrence.

Chromite is widely distributed in California, the principal production, thus far, having come from El Dorado, San Luis Obispo, Del Norte, Shasta, Siskiyou, Placer, Fresno, and Tuolumne counties. In 1918 a total of 29 counties contributed to the State's output. There are two main belts in California yielding this mineral, one along the Coast Ranges from San Luis Obispo County to the Oregon line, including the Klamath Mountains at the north end, and the other in the Sierra Nevada from Tulare County to Plumas County. Chromite occurs as lenses in basic igneous rocks such as periodotite and pyroxenite, and in serpentines which have been derived by alteration of such basic rocks.

Uses.

The major consumption of chromite ore is for use as a refractory lining in smelting furnaces for steel and copper. A smaller portion is used in the preparation of ferrochrome for chrome-steel alloys, and of chromium chemicals, the latest development of which is chrome plating

as used in the automobile industry, on ships, and in oil refineries to protect metal surfaces from wear and erosion.

Imports.

Imports of foreign chromite¹ to the United States duty free during 1939, came mainly from Southern Rhodesia, Union of South Africa, New Caledonia, Phillippine Islands, Turkey, Greece, and India, totaled 317,511 long tons, valued at \$3,814,944 for 1939, compared with 352,085 long tons valued at \$4,854,892 for 1938.

Total Chromite Production of California.

Production of chromite in California began, apparently in the period 1869-1873 in Del Norte County, followed by San Luis Obispo in 1874. There was considerable activity in San Luis Obispo from 1880 to 1883, inclusive, and a total of 23,238 long tons (or 26,028 short tons) valued at \$329,924 was shipped from that county up to the beginning of 1887. There are records of shipments from Sonoma County (before 1883), Placer County (1883 and 1884), and Calaveras County. Apparently the state's total in the period 1869-1883 was some 45,000 tons.² The tabulation herewith shows the output of chromite in California annually, including the earliest figures so far as they are available. The figures from 1887 to date are from the records of the State Mining Bureau:

Year	Tons	Value	Year	Tons	Value
1869-1883					
Del Norte County.....	19,000	\$239,400	1913.....	1,180	\$12,700

¹ U. S. Bureau of Foreign and Domestic Commerce, Monthly Summary of Foreign Commerce to the United States, Dec. 1939.

² Day, D. T., Mineral Res. of the U. S. 1883-1884, U. S. G. S., pp. 569, 570, 1885.

COBALT

Bibliography: Report XIV, XXXIII, XXXIV. Bulletins 67, 91. U. S. G. S., Min. Res. of U. S., 1912, 1918. U. S. B. M., I. C. 6331.

Occurrences of some of the cobalt minerals have been noted in several localities in California, but to date no commercial production has resulted. Some of the copper ores of the foothill copper belt in Mariposa and Madera counties have been found to contain cobalt up to 3%.

The nominal quotation for cobalt (May 16, 1940) is around 97 to 99% at \$2.11 per pound for the refined metal.

The most important use of cobalt is in the manufacture of the alloy, stellite, in which it is combined with chromium, for making high-speed lathe tools, and non-tarnishing cutlery and surgeons' appliances. The metal is also used in electroplating, similarly to nickel; and the oxide, carbonate, chloride, sulphate and other salts are used in ceramics for coloring. Some of the organic salts of cobalt (acetate, resinate, oleate) are employed as 'driers' in paint and varnish.

COPPER

Bibliography: State Mineralogist Reports VIII-XXXV (inc.). Bulletins 23, 50, 91.

The total output of copper in California during 1939 amounted to 8,390,215 pounds of recoverable metal valued at \$872,582. This was an increase in amount and value as compared with the 1938 production which was 1,613,491 pounds worth \$158,122. The average price of copper in 1939 was 10.4¢ per pound compared with 9.8¢ in 1938; 12.1¢ in 1937; 9.2¢ in 1936; 8.3¢ in 1935; 8.0¢ in 1934; and 6.4¢ in 1933.

Copper was second to gold among the metals in California from 1896 to 1932, when it was passed in output by quicksilver and silver, and in 1933 also by tungsten, in 1936 and 1937 by silver only, and in 1938 and 1939 by silver, quicksilver and tungsten.

Distribution of the 1939 output of copper in California by counties was as follows:

County	Pounds	Value
Amador.....	3,933	\$409
Butte.....	5,838	607
El Dorado.....	10,910	1,135
Imperial.....	67,328	7,002
Inyo.....	74,543	7,752
Kern.....	3,238	337
Los Angeles.....	2,936	305
Mariposa.....	3,810	396
Napa.....	9,667	1,005
Nevada.....	27,113	2,820
Placer.....	5,719	595
Plumas.....	8,051,386	\$37,344
Riverside.....	68,683	7,143
San Bernardino.....	43,133	4,486
Tuolumne.....	9,860	1,025
Alpine, Calaveras, Modoc, Orange, Shasta, Sierra and Trinity*	2,118	221
Totals.....	8,390,215	\$872,582

* Combined to conceal the output of individual producers in each.

According to preliminary data issued by the U. S. Bureau of Mines¹ the smelter production of primary copper from domestic sources during 1939 amounted to 1,425,349,488 pounds, an increase of approximately 27 per cent compared with the 1938 output. The value decreased approximately 34 per cent in 1939. The average price of copper delivered during the year, as reported to the U. S. Bureau of Mines by selling agents, was 10.4¢ per pound.

Copper Production of California, by Years.

Although some mining of copper ores in a small way had been done earlier, shipments in appreciable quantities began in 1861 and continued of importance up to the end of 1867, when a total of 68,631 tons (of 2376 pounds) of high-grade ores, and 847 tons of matte or 'regulus'² had been shipped to smelters at New York, Boston, and Swansea, Wales. The most important district at that time was Copperopolis and vicinity in Calaveras County, with some shipments also made from Mariposa, El Dorado, Fresno and San Luis Obispo counties. From 1868 to 1882, the output was insignificant. There are wide discrepancies in the figures recorded for copper production previous to 1882, in which year the data of the U. S. Geological Survey began. The detailed statistics of the California State Mining Bureau began in the year 1894.

Amount and value of copper production in California annually since 1882 is given in the following tabulation:

Copper Production of California, by Years

Year	Pounds	Value	Year	Pounds	Value
1882.....	826,695]	\$144,672	1911.....	36,838,024	\$4,604,753
1883.....	1,600,862	265,743	1912.....	34,169,997	5,638,049
1884.....	876,166	120,911	1913.....	34,471,118	5,343,023
1885.....	469,028	49,248	1914.....	30,491,535	4,055,375
1886.....	430,210	43,021	1915.....	40,968,966	7,169,567
1887.....	1,600,000	192,000	1916.....	55,809,019	13,729,017
1888.....	1,570,021	235,303	1917.....	48,534,611	13,249,948

GOLD

Bibliography: State Mineralogist Reports I to XXXV (inc.), (except III and VIII). Bulletins 36, 45, 57, 91, 92, 95, 108. U. S. Geol. Surv., Prof. Paper 73. U. S. Bur. of Mines, Econ. Paper 3 (1929).

Gold was first, and, for many years, the most important single mineral product of California. Although now surpassed for a number of years in annual value by petroleum, and by natural gas from 1923 to 1932, it still heads our metal list, and California continues to outrank all the other gold-producing States of the United States, including Alaska. In fact, at present, California is producing approximately 31% of the gold mined in the entire United States.

There has been a steady increase in the development of both lode and placer mines in California during the last ten years, brought about by the present economic conditions. During 1939 there were 1777 operators in California, not including snipers, prospectors and

Photo by R. K. Voorhies

600-ton sand leaching plant, Santa Fe Mine, San Bernardino County

various individuals, selling gold in small lots to the bullion dealers. There was no premium paid on gold during 1932, the price being \$20.67 a fine ounce. On August 29, 1933, there was an executive order lifting the embargo on gold ores, concentrates, precipitates, and unretorted amalgam, followed on October 25, 1933, by another order instructing the Reconstruction Finance Corporation to buy newly-mined gold at a price fixed by the U. S. Treasurer which corresponded to the world price, all of which had an effect on the 1933 gold yield. On January 30, 1934, the Gold Reserve Act of 1934 was passed, followed by the President's proclamation of January 31, 1934, which fixed the weight of the gold dollar at 15 5/21 grains, nine-tenths fine. The value of gold thereby became \$35 a fine ounce. The average weighted value of gold per fine ounce in 1934 was \$34.95.

The production of gold in California during 1939 totaled 1,435,264 fine ounces valued at \$50,234,240, being an increase of 124,135 fine ounces over the 1938 yield which was 1,311,129 fine ounces worth \$45,889,515. Deep or lode mines accounted for 799,219 fine ounces worth \$27,972,665; and placers (mainly bucket-line, dragline and power shovels dredges) produced 636,045 fine ounces worth \$22,261,575. The 1939 output was the largest in value since 1856 and in amount since 1862 with that of lode being undoubtedly the largest in the history of the State.

As the Division of Mines has never independently gathered the statistics of gold and silver production, these figures, as in former years, are published by cooperation with and through the courtesy of Charles White Merrill and H. M. Gaylord of the Division of Mineral Statistics, U. S. Bureau of Mines.

Distribution for the 1939 gold output by counties was as follows:

County	Mines producing ¹		Total

¹ Excludes itinerant prospectors, snipers, high-graders, and others who gave no evidence of legal right to property.

² Combined to avoid disclosure of individual output.

³ Output from property not classed as a "mine."

The largest production of gold by counties was reported by Nevada County with an output of 318,733 fine ounces (\$11,155,655); followed by Sacramento County second with 154,141 fine ounces (\$5,394,935); Amador County third with 119,058 fine ounces (\$4,167,-

030); Calaveras County fourth with 105,997 fine ounces (\$3,709,895); Kern County fifth with 90,029 fine ounces (\$3,151,015); Yuba County sixth with 86,799 fine ounces (\$3,037,965); followed in turn by El Dorado, Merced, Siskiyou, Shasta, Placer, Trinity, and Mariposa counties all with a total gold output in excess of a million dollars.

Nevada held the first place as a gold producing county with an output exceeding that of Yuba or Amador which held first and second places respectively in 1928 with Sacramento fourth that year. Sacramento was in second place, exceeding Amador County, which held this place in 1937. The gold from Nevada, Amador and Kern counties is mainly from the lode or deep mines; while that from Sacramento and Yuba counties is almost entirely from dredges and that from Calaveras County is about equally divided between lode mines and dredges.

The following is quoted from the advance statement of gold in 1939 by courtesy of the U. S. Bureau of Mines,* Department of Commerce:

"Gold. Since 1929, when the value of California gold output reached a low of \$8,526,703, production has expanded almost six-fold; the gain in 1939 over 1938 alone was more than half the total value of the output in 1929. In quantity the 1939 gold output was greater than in any year since 1862, and in value it was greater than in any year since 1856. During the last three years the following percentage gains have been registered over the respective preceding years: 1939, 9 per cent; 1938, 12 per cent; and 1937, 9 per cent. Thus, a 10 per cent per annum increase has been sustained over the period.

"Although data for gold production in California before 1901 do not segregate placer and lode gold, it appears certain that the output of lode gold was larger in 1939 in both quantity and value than in any year in the history of the State. The quantity and value of placer gold produced are known to be higher in 1939 than in any year since 1900. Moreover, the value of placer gold in 1939 exceeds the value of lode and placer gold combined for any year from 1865 to 1882 and from 1884 to 1900.

"The 25 leading California gold properties, listed in the following table, produced 54 per cent of the total gold output of the State in 1939. Newcomers to the list in 1939 were six lode mines which displaced four connected-bucket dredges and two lode mines. All of the newcomers had had substantial output in 1938 except the Alhambra Shumway which started production March 14, 1939, after a long exploration campaign. Of the leading producers, 16 derived their gold from gold ore, seven from dredging gravel, and one each from gold-silver ore and copper ore. The producers ranking first, second, and sixth are in the Grass Valley-Nevada City district, Nevada County."

* U. S. Bureau of Mines, Mineral Year Book, 1940, pp. 209-210.

Twenty-five Leading Gold Producers in California in 1939, in Approximate Order of Output

Rank	Mine	District	County	Rank in 1938	Operator	Source of Gold

¹ Production started March 14, 1939.

Total Gold Production of California.

The presence of gold in stream gravels near Los Angeles was known and worked in a small way by the Indians, at least as early as 1841,¹ and possibly 1820.² On March 2, 1844, Don Manuel Castanares, deputy for California to the Congress of Mexico, reported³ to his government that placers near Los Angeles had produced up to December, 1843, a total of 2000 ounces of gold dust, most of which had been sent to the United States Mint at Philadelphia.

As the padres and the rancheros discouraged the quest of gold, this early, small production caused no particular excitement. It was not until James W. Marshall's finding of gold nuggets in the tail-race of Sutter's saw mill on the American River, January 24, 1848, was heralded abroad that the great rush began, and California became a commonwealth of first rank almost over night. There are, however, no authentic data on gold production prior to 1848, other than occasional, scattered references such as above quoted.

The following table was originally compiled by Chas. G. Yale, of the Division of Mineral Resources, U. S. Geological Survey, but for a number of years statistician of the California State Mining Bureau

¹ Hittell, T. H., History of California, Vol. II, p. 12, 1885.

² Bancroft, H. H., History of California, Vol. II, p. 417, 1886.

³ Mercantile Trust Review of the Pacific, Vol. XIV, No. 2, p. 43, Feb. 15, 1925.

and the U. S. Mint at San Francisco. The authorities chosen for certain periods were: J. D. Whitney, State Geologist of California; John Arthur Phillips, author of "Mining and Metallurgy of Gold and Silver" (1867); U. S. Mining Commissioner R. W. Raymond; U. S. Mining Commissioner J. Ross Browne; Wm. P. Blake, Commissioner from California to the Paris Exposition, where he made a report on "Precious Metals" (1867); John J. Valentine, author for many years of the annual report on precious metals published by Wells, Fargo & Company's Express; and Louis A. Garnett, in the early days manager of the San Francisco refinery, where records of gold receipts and shipments were kept. Mr. Yale obtained other data from the reports of the director of the U. S. Mint and the director of the U. S. Geological Survey. The authorities referred to who were alive at the time of the original compilation of this table in 1894 were all consulted in person or by letter by Mr. Yale with reference to the correctness of their published data, and the final table quoted was then made up.

The figures for 1903-1923 (inclusive) are those prepared by the U. S. Geological Survey; and since by the U. S. Bureau of Mines:

Total Gold Production of California, 1848 to 1938

Year	Fine ounces	Value	Year	Fine ounces	Value
1848	11,866	\$245,301	1895	741,798	\$15,334,317

IRIDIUM (see under Platinum)

IRON ORE

Bibliography: State Mineralogist Reports II, IV, V, X, XII-XV (inc.), XVII, XVIII, XXI-XXVII (inc.), XXX, XXXI, XXXIII-XXXV (inc.). Bulletins 38, 67, 91. Am. Inst. Min. Eng., Trans. LIII. Min. & Sci. Press, Vol. 115, pp. 112, 117-122; Vol. 123, pp. 94-96, 113-114.

During 1939 shipments of iron ore in California amounting to 16,990 short tons valued at \$77,788 coming from a single property in each of the counties of Inyo, San Bernardino, and Santa Cruz. The 1939 output showed a decrease in amount and value from that of 1938 which was 27,878 tons worth \$141,406.

The material mined during the year was hematite from Inyo and San Bernardino counties, and magnetite sands from Santa Cruz County. The hematite was used mostly in high-iron cement with some going to foundries as a flux.

There was also some high-grade limonite mined in Yuba County, but as it was used in the manufacture of pigments, it has been classed under Mineral Paints.

There are considerable deposits of iron ore known in California, notably in Shasta, Madera, Placer, Riverside, San Bernardino, and Los Angeles counties, but production has so far been limited for lack of an economic supply of coking coal. Some pig iron has been made, utilizing charcoal for fuel, both in blast furnaces and by electrical reduction; also, ferrochrome, ferromanganese, and ferrosilicon have been made in California.

Iron Ore Production in California, by Years.

Total iron ore production of California, with annual amounts and values, is as follows:

Year	Tons	Value	Year	Tons	Value
1881*	9,273	\$79,452	1918	3,108	\$15,947
1882	2,073	17,766	1919	2,300	13,796
1883	11,191	106,540	1920	5,975	40,889
1884	4,532	40,983	1921	1,970	12,030
1885			1922	3,588	18,868
1886	3,676	19,250	1923	3,102	18,665
1887			1924		
1893	250	2,000	1925/ a	785	4,710
1894	200	1,500	1926		
1895			1927/ a	5,272	26,000
1907	400	400	1928		
1908			1930		
1909	108	174	1931/ a	100	700
1910	579	900	1932		
1911	558	558	1934		
1912	2,508	2,508	1935/ a	38,339	163,714

1914	1,436	5,128	1937	5,490	29,340
1915	724	2,584	1938	27,878	141,406
1916	3,000	6,000	1939	16,990	77,788
1917	2,874	11,496			
			Totals	191,586	\$1,121,011

* Productions for the years 1881-1886 (inc.) were reported as "tons of pig iron" (U.S.G.S., Min. Res. 1885), and for the table herewith are calculated to "tons of ore" on the basis of 47.6% Fe as shown by an average of analyses of the ores (State Mineralogist Report IV, p. 242). This early production of pig iron was from the blast furnaces then in operation at Hotelling in Placer County. Charcoal was used in lieu of coke. Though producing a superior grade of metal, they were obliged finally to close down, as they could not compete with the cheaper English and eastern United States iron brought in by sea to San Francisco.

a Annual details concealed under 'Unapportioned.'

LEAD

Bibliography: State Mineralogist Reports IV, VIII-XV (inc.), XVII-XXVIII (inc.), XXX, XXXI, XXXIII-XXXV (inc.).

The production of lead in California during 1939 amounted to a total of 1,061,294 pounds of recoverable metal valued at \$49,880, compared with the 1938 figures of 1,003,096 pounds of \$46,142. The average price of lead in 1939 was 4.7¢ per pound compared with 4.6¢ per pound in 1938; 5.9¢ per pound in 1937; 4.6¢ in 1936; 4.0¢ in 1935; and 3.7¢ in 1934.

Distribution of the 1939 output of lead by counties was as follows:

County	Pounds	Value
Amador.....	1,565	\$49
Butte.....	11,799	555
Calaveras.....	1,651	78
El Dorado.....	4,766	224
Imperial.....	1,598	75
Inyo.....	174,407	8,197
Kern.....	28,542	1,341

Sierra.....	4,752	223
Alpine, Orange, Plumas, Tuolumne*	13,094	640
Totals.....	1,061,294	\$49,880

* Combined to conceal the output of individual operators in each.

Lead Production of the United States.

According to preliminary data issued by the U. S. Bureau of Mines¹ during 1939, the production of primary lead in the United States was 420,967 short tons valued at \$39,571,000, being an increase from the national production of 1938, which was 331,964 short tons worth \$30,541,000.

¹ U. S. Bureau of Mines, Mineral Market Notes 814, April 5, 1940.

Lead Production of California, by Years.

Statistics on lead production in California were first compiled by this Bureau in 1887. Amount and value of the output, annually, with total figures, to date, are given in the following table:

Lead Production of California, by Years

Year	Pounds	Value	Year	Pounds	Value
1877.....	^a 7,836,000	\$391,800	1909.....	2,685,477	\$144,897

MANGANESE

Bibliography: State Mineralogist Reports XII-XV (inc.), XVIII, XXII-XXVII (inc.), XXIX-XXXI, XXXIII-XXXV (inc.). Bulletins 38, 67, 76, 91. U. S. G. S. Bull. 427. Eng. & Min. Jour.-Press, Vol. 117, p. 545.

A sample shipment of manganese concentrates assaying 50% Manganese was made from Imperial County during 1939, and was the first output since 1935. The material mined in 1935 came from a single property in Riverside County and was consumed in the steel mills of the state. The annual details are concealed under the 'Unapportioned' item as one operator made all the shipments.

Imports of foreign manganese ore into the United States¹ during 1939, mainly from Soviet Russia, Gold Coast, Cuba and Brazil, amounted to 657,813 long tons of ore containing 322,708 long tons of manganese valued at \$8,628,059, as compared with 513,637 long tons of ore containing 242,857 long tons of manganese valued at \$7,046,827.

¹ U. S. Bureau of Foreign and Domestic Commerce, Monthly Summary, December, 1939.

The Tariff Act of 1930 provides for an import duty of 1¢ per pound on the metallic manganese contained, for "manganese ore (including ferruginous manganese ore) or concentrates containing in excess of 10 per centum of metallic manganese."

Manganese Ore Production in California, by Years.

Production of manganese ore in California began at the Ladd Mine, San Joaquin County, in the Tesla District in 1867. When shipments of this ore to England ceased late in 1874, upwards of 5000 tons had been produced by that property. For some years following that, the output was small. The tabulation herewith shows California's output of manganese ore, annually, since 1887, when the compilation of such figures was begun by the State Mining Bureau:

Year	Tons	Value	Year	Tons	Value
1887	1,000	\$9,000	1912	22	\$400
1888	1,500	13,500	1913		
1889	53	901	1914	150	1,500
1890	386	3,176	1915	4,013	49,068
1891	705	3,830	1916	13,404	274,601
1892	300	3,000	1917	15,515	396,659
1893	270	4,050	1918	26,075	979,235
1894	523	5,512	1919	11,569	451,422
1895	880	8,200	1920	2,892	62,323

MOLYBDENUM

Bibliography: State Mineralogist Reports XIV, XVII-XXIV (inc.), XXVI-XXVIII (inc.), XXX, XXXIV, XXXV. Bulletins 67, 91. U. S. Bur. of Min., Bulletin 111. Proc. Colo. Sci. Soc., Vol. XI.

Molybdenum is used as an alloy constituent in the steel industry, and in certain forms of electrical apparatus. Included in the latter is its successful substitution for platinum and platinum-iridium in electric contact-making and -breaking devices. In alloys it is used similarly to and in conjunction with chromium, cobalt, iron, manganese, nickel, tungsten and vanadium. The oxides and the ammonium salt have important chemical uses.

The two principal molybdenum minerals are: the sulphide, molybdenite, and wulfenite, lead molybdate; the former furnishing practically the entire commercial output. Molybdenite is found in or associated with acidic igneous rocks, such as granite and pegmatite.

Deposits of disseminated molybdenite are known in several localities in California, and in at least two places it occurs in small masses

associated with copper sulphides. The first recorded commercial shipments of molybdenum ore in California were during the war, 1916-1918. Some development work has been done on a high-grade deposit at the head of the Kaweah River, Tulare County.

The growing consumption of molybdenum by alloy-steel makers in the United States has been stimulated by the fact that molybdenum alone of the steel-alloying metals can be produced commercially in the United States to an extent which avoids all necessity for importation. Another fact has been the marked adaptability of molybdenum steels to large-scale production of automobile and other parts.

The Tariff Act of 1930 provides for an import duty of 35 cents a pound for the metallic molybdenum content of molybdenum ores or concentrates.

The present (May 2, 1940) quotations on molybdenum ores are 45¢ per pound of MoS_2 contained, f.o.b. mine, and on ferromolybdenum are 95¢ per pound Mo, 55%-65% Mo f.o.b. shipping point.

During 1939 there were shipments of molybdenum concentrates in California coming from a tungsten mine in Inyo County, the amount of which was greater than the total of all previous production. In 1933 and 1934 there were shipments of molybdenum concentrates in California amounting to 1432 pounds 91.23% MoS_2 valued at \$306. The annual details are combined under the 'Unapportioned' item to conceal the output of a single operator.

Molybdenum Production of California, by years.

California's production of molybdenum ore by years is summarized in the following tabulation:

Year	Pounds of MoS_2	Value
1916-----	9,280	\$9,945
1917-----	7,290	9,014
1918-----	-----	-----
1919-----	270	300
1933 }-----	-----	-----
1934 } ^a -----	1,306	306
1939-----	^a	^a
Totals-----	18,146	\$19,565

^a Annual details concealed under 'Unapportioned.'

NICKEL

Bibliography: State Mineralogist Reports XIV, XVII, XXIV, XXV, XXVIII, XXX, XXXIV, XXXV. U. S. G. S., Bulletin 640-D. U. S. Bureau of Standards, Circular 100.

Nickel occurs in the Friday Copper Mine in the Julian District, San Diego County. The ore is a nickel-bearing pyrrhotite, with some associated chalcopyrite. Some ore has been mined in the course of development work but not treated nor disposed of, as they were unable to get any smelter to handle it for them. Nickel ore has also been reported from other localities in California, but not yet confirmed.

Present (May 2, 1940) quotations for nickel are around 35¢ per pound for the refined metal.

OSMIUM (see under Platinum)

PALLADIUM (see under Platinum)

PLATINUM GROUP METALS

Bibliography: State Mineralogist Reports IV, VIII, IX, XII-XXVI (inc.), XXVIII, XXX, XXXI, XXXIV-XXXV. Bulletins 38, 45, 67, 85, 91, 92. U. S. Geol. Surv., Bulletins 193, 285. Trans. Am. Inst. Min. Eng., Vol. 47, pp. 217-218.

In California the platinum-group metals are obtained as a by-product from placer operations for gold. The major portion of it comes from the dredges working in Amador, Butte, Merced, Sacramento, Stanislaus, Shasta, Trinity and Yuba counties, with a small amount coming from the hydraulic and surface sluicing mines of Del Norte, Humboldt, Siskiyou and Trinity counties.

Platinum-group metals mined during 1939 amounted to 1337 ounces crude of which 317 ounces were not sold. 1020 ounces crude were shipped and sold, containing 896.12 fine ounces worth \$32,135. This metal came from properties in Amador, Butte, Calaveras, Del Norte, El Dorado, Humboldt, Merced, Placer, Plumas, Sacramento, San Francisco, Shasta, Siskiyou, Tehama, Trinity, Tuolumne and Yuba counties. Of the above metal sold in 1939, there was 337.82 fine ounces of platinum; 302.95 fine ounces of iridium; 198.81 fine ounces of osmium; 17.74 fine ounces of palladium; and 58.80 fine ounces were a mixture of ruthenium, rhodium, osmiridium, etc. The 1938 output was 1,194.40 ounces crude containing 1,069.36 fine ounces worth \$35,150.

Present quotations¹ (May 2, 1940) are platinum \$38.00 a fine ounce; iridium 99 per cent plus, \$150; osmium per fine ounce, \$50 to \$55; palladium per fine ounce \$24; ruthenium per fine ounce \$35 to \$40; rhodium per fine ounce \$125.

Platinum Production of California, by Years.

The annual production and values since 1887 have been as follows:

Year	Ounces	Value	Year	Ounces	Value

QUICKSILVER

Bibliography: State Mineralogist Reports IV, V, XII-XV, XVII-XXIX (inc.), XXXI, XXXIII-XXXV (inc.). Bulletins 27, 78, 91. U. S. Geol. Surv., Monograph XIII. U. S. Bur. of Mines, Tech. Papers 96, 227; Bulletin 222, 335.

The production of quicksilver in California in 1939 amounted to 11,201 flasks valued at \$1,102,563, compared with 12,171 flasks worth \$846,497 in 1938. The 1939 output came from 78 properties in 18 counties and was distributed as follows:

County	Flasks	Value
Kings -----	25	\$2,583
Lake -----	4,155	416,150
Monterey -----	11	1,151
Napa -----	691	71,823
San Benito -----	3,860	360,567
San Luis Obispo -----	276	26,587
Santa Barbara -----	74	6,876
Santa Clara -----	252	26,098
Sonoma -----	255	27,212
Contra Costa, Fresno, Inyo, Kern, Mono, Orange, Solano, Trinity, Yolo *-----	1,602	166,716
Totals -----	11,201	\$1,105,563

* Combined to conceal output of a single operator in each.

During 1939 the average for New York monthly quotations ¹ was \$103.940 per 76 pound flask. The average New York price for 1938 was \$75.469 per flask. The average quotation for January, 1939 was \$77.440 per flask; with an unward trend till April when quotation reached \$90.800, then dropped to \$84.407 for August, and with the outbreak of the war in Europe quotations rose to an average of \$140.00 for September, \$145.60 for October, \$134.978 for November and \$141.-200 for December. In 1940 the price continued to rise and in June the average quotation was \$197.36 per flask. The average amount received by producers in California during 1939 was \$98.434 per 76 pound flask, compared with \$69.55 per flask in 1938.

The U. S. Bureau of Mines ² reported the total production of the United States for 1939 at 18,633 flasks valued at \$1,936,714, compared with the national output of 17,991 flasks worth \$1,357,781 for 1938. California was the largest producing state, by a considerable margin, with 60 per cent of the total, other producing states being Oregon, Nevada, Arizona, Arkansas, Idaho, and Texas.

The 1939 imports of quicksilver amounted to 3,499 flasks valued at \$336,744 of which 2,601 flasks came from Spain, 562 flasks from Mexico, and 336 flasks from Italy. The 1938 imports totaled 2,362 flasks worth \$132,610.

Total Quicksilver Production of California.

Total amount and value of the quicksilver production of California, as given in available records, are shown in the following tabulation. Though the New Almaden Mine in Santa Clara County was first worked in 1824, and was in practically continuous operation from 1846 to 1921 (the yield being small the first two years), there are no available data on the output earlier than 1850. Previous to June, 1904, a 'flask' of quicksilver contained 76½ pounds; then 75 pounds up to and includ-

SILVER

Bibliography: State Mineralogist Reports IV, VIII, XII-XXXV (inc.). Bulletins 67, 91, 108. Min. & Sci. Press, March 1, 1919.

The 1939 silver output in California totaled 2,599,139 fine ounces valued at \$1,764,264, being an increase in amount and value over the 1938 figures, which were 2,590,804 fine ounces worth \$1,674,863. Of the 1939 yield there were 56,131 fine ounces valued at \$38,101 from placers, the remainder from lode ores. The average price paid for newly mined domestic silver was 67.80¢ per fine ounce in 1939; 64.60¢ in 1938; 77.35¢ in 1937; 77.45¢ in 1936; 71.875¢ in 1935; and 64.60¢ in 1934.

Silver production by counties for 1939 was as follows:

<i>County</i>	<i>Ounces</i>	<i>Value</i>
Alpine -----	4,489	\$3,047
Amador -----	22,703	15,411
Butte -----	17,106	11,611
Calaveras -----	23,664	16,063
Del Norte -----	22	15
El Dorado -----	12,710	8,627
Fresno -----	85	58
Humboldt -----	166	113
Imperial -----	8,951	6,076
Inyo -----	30,104	20,434
Kern -----	1,130,888	767,633
Lassen -----	355	241
Los Angeles -----	967	656
Madera -----	267	181
Mariposa -----	19,418	13,181
Merced -----	4,743	3,219
Modoc -----	4	3
Mono -----	87,279	59,243
Monterey, Orange, and Ventura ¹ -----	4,254	2,888
Napa -----	291,248	197,696
Nevada -----	410,826	278,864
Placer -----	54,235	36,814
Plumas -----	194,578	132,077
Riverside -----	17,095	11,604

Yuba -----	9,170	6,224
Totals -----	2,599,139	\$1,764,264

¹ Combined to avoid disclosure of individual output.

The following paragraph is quoted from the U. S. Bureau of Mines,¹ chapter on Gold and Silver from Mineral Year Book 1940, by courtesy of Charles White Merrill and H. M. Gaylord.

"*Silver.* The bulk of the silver output of California in 1939 was more localized than that of gold; the 10 leading properties listed below produced 83 percent of the total recoverable silver. Newcomers to the list in 1939 were the Walker mine, Genessee district, Plumas County, and the Alabama mine, Ophir district, Placer County, which displaced the Silverado-Kentuck, Mount Patterson district, Mono County, and the Idaho Maryland mine, Grass Valley-Nevada City district, Nevada County. The two new mines were substantial producers in 1938; the Idaho Maryland dropped only to eleventh place in 1939, but the Silverado-Kentuck, the leading producer for several years prior to 1938, was idle in 1939. Of the 10 leading in 1939, five derived their silver output from gold ore, four from gold-silver ore, and one from copper ore; and only 42,132 ounces of silver were derived from straight silver ores in California in 1939. In addition to the yield of the companies listed, some silver output was reported recovered from almost every lode and placer mine operating in the State in 1939."

¹ U. S. Bureau of Mines, Mineral Year Book, 1940, p. 210.

Ten Leading Silver Producers in California in 1939, in Order of Output

Rank	Mine	District	County	Rank in 1938	Operator	Source of silver
1	Cactus Queen	Mojave	Kern	1	Cactus Mines Co.	Gold-silver
2	Golden Queen	Mojave	Kern	5	Golden Queen Mining Co.	Gold ore
3	Grigsby (Palisade)	Calistoga	Napa	6	Graham Loftus Oil Corp.	Gold-silver
4	Lava Cap	Grass Valley	Nevada	2	Lava Cap Gold Mining Corp.	Gold ore
5	Starlight	Mojave	Kern	3	Lodestar Mining Co.	Gold ore
6	Walker	Genesee	Plumas	11	Walker Mining Co.	Copper ore
7	Kelly	Randsburg	San Bernardino	4	F. Royer & Lessees	Gold-silver
8	Empire Star Mines	Grass Valley	Nevada	8	Empire Star Mines Co., Ltd.	Gold ore
9	Standard	Bodie	Mono	9	Rosekrip Mines Co.	Gold-silver
10	Alabama	Ophir	Placer	13	Alabama California Gold Mines Co.	Gold ore

Silver Production of California, by Years.

The amount and value of the silver production of California, and the average price, annually, since 1880 are given in the table following. In the table shown in the statistical bulletins previous to Bulletin 97 (for 1925), the values shown for 1880-1904 (inc.) were taken from the reports of the Director of the Mint, of which the figures for 1880-1896 (inc.) were based on 'coinage value' (\$1.2929 per fine ounce). We have recalculated these to commercial value, using the price table of the U. S. Geological Survey (McCaskey, H. D.), Gold and Silver, 1913: Mineral Resources of the U. S., Part I, p. 847. From 1905 to date, the figures are those of the U. S. Geological Survey and its successor, the U. S. Bureau of Mines. Figures for the years prior to 1880 are not available, as there were no reliable records compiled.

Silver Production of California, by Years, Since 1880

Year	Fine oz.	Value	Average price per oz.	Year	Fine oz.	Value	Average price per oz.
1880	882,169	\$1,014,494	\$1 15	1911	1,270,445	\$673,336	\$0 53

TIN

Bibliography: Reports XV, XVII, XVIII, XXV, XXXI, XXXIV, XXXV. Bulletins 67, 91.

In 1928 and 1929 there was a small amount of tin produced from California ore as well as considerable development work which was done at the Temescal mine in Riverside County near Corona. There was an output from the district during 1891-1892 as tabulated below. Small quantities of stream tin have been found in some of the placer workings in northern California, but never in paying amounts.

Two occurrences have also been noted, in northern San Diego County. Crystals of cassiterite were found there, associated with blue tourmaline crystals, amblygonite and beryl. No commercial quantity has been developed, only small pockets having been taken out.

Total Output of Tin in California

Year	Pounds	Value
1891.....	125,289	\$27,564
1892.....	126,000	32,400
1928.....		
1929/ *.....	1,200	580
Totals.....	252,489	\$60,544

*Annual details concealed under 'Unapportioned.'

TITANIUM

Bibliography: State Mineralogist's Report XXIII, XXXIV.

During 1939 there was a small shipment of titanium ore (ilmenite) made from material recovered from beach sand at Hermosa Beach, Los Angeles County. The annual details are concealed under the 'Unapportioned' item to conceal the output of an individual producer.

In 1938 the E. I. du Pont de Nemours Company did exploration work on the deposit of ilmenite in the San Gabriel Mountains in Los Angeles County to determine the extent of the deposit. They also ran an experimental test on the ores for commercializing it in the near future.

In 1927 the first recorded shipments of titanium minerals were made in California. The total of the 1927 and 1928 production was 10,013 tons valued at \$150,195. All of this came from Los Angeles County and was produced from either the beach black sands which contained approximately 20% titaniferous iron and magnetite, the gangue being silica and several silicates, or from a lode deposit in the San Gabriel Mountains.

The metal is used in several different alloys with iron, copper and aluminum and for green and white paint pigments, the only colors of titanium pigments now in common use. It is also used in dyes, rubber, as a porcelain glaze, in glass, and cement made from high-titanium iron slags. This cement is resistant to the action of acids.

The market price of titanium minerals varies as to the titanium oxide it contains. Present (May 2, 1940) quotations are: Rutile 94%

TiO at 10¢ a pound, ilmenite 50 to 60% TiO at \$16 to \$18 a ton, all prices Atlantic seaboard.

TUNGSTEN

Bibliography: Reports XV, XVII, XVIII, XXII, XXIV, XXVII (inc.) XXX, XXXIV, XXXV. Bulletins 38, 67, 91, 95, U. S. G. S., Bull. 652. Proc. Colo. Sci. Soc., Vol. XI. South Dakota School of Mines, Bulletin No. 12. Eng. and Min. Jour.-Press, Vol. 113, pp. 666-669, Apr. 22, 1922.

The commercial production of tungsten ores and concentrates in California began in 1905; and has been continuous since, with the exception of 1920-1922 inclusive. The material shipped in 1939 was high-grade sorted ore and concentrates, came from four properties in Inyo County, two in San Bernardino County, and a single property each in Fresno, Kern, Mono, and Tulare counties. A total of 1,221

Photo by John M. Hague

Pine Creek Tungsten Mine, Pine Creek, Inyo County

short tons of concentrates averaging 60.7 per cent WO_3 was reported shipped, yielding 74,110 units or 1,235 tons of 60 per cent WO_3 and valued at \$1,153,735 at the mine. The 1939 output showed an increase in both amount and value as compared with that of 1938, which was 768 tons of 60% WO_3 contents worth \$786,860, and was the largest annual yield since 1918.

Quotations in the "E. & M. J. Metal and Mineral Markets" during 1939 for Chinese wolframite, duty paid, in January was \$19.50 per unit WO_3 , declining to \$18 per unit WO_3 in June and raising to \$23 a unit WO_3 in September and ending the year at \$23.50 a unit WO_3 . Domestic scheelite in January was \$16 to \$19 per unit WO_3 , dropped to \$15 to \$16 a unit WO_3 in May, increased to \$23 to \$25 a unit WO_3 in September and ended the year at \$22 to \$24 a unit WO_3 . The pres-

ent (July 25, 1940) quotations per unit WO_3 are Chinese wolframite duty paid \$23.50; domestic scheelite \$22 to \$23.

Imports of foreign tungsten ores and concentrates during 1939 according to the U. S. Bureau of Foreign and Domestic Commerce amounted to 2,743,472 pounds valued at \$997,971, compared with 322,085 pounds worth \$138,693 in 1938. The Tariff Act of 1930 raised the duty on tungsten ore or concentrates to 50 cents per pound on the metallic tungsten contained therein. Duties are also provided for imported tungsten-bearing alloys.

Tungsten ore has been produced in California principally in the Atolia-Randsburg district in San Bernardino and Kern counties, followed by the Bishop district in Inyo County, with small amounts coming from Nevada County and from the district near Goffs, in eastern San Bernardino. Most of California's tungsten ore is scheelite (calcium tungstate), though wolframite (iron-manganese tungstate) and hüberrite (manganese tungstate) also occur. The deposits at Atolia were the largest and most productive scheelite deposits known, previous to 1930.¹ (Since passed by Mill City District, Nevada).

Total Tungsten Ore Production of California.

The annual amount and value of tungsten ores and concentrates produced in California since the inception of the industry is given herewith, with tonnages recalculated to 60% WO_3 :

Year	Tons at 60% WO_3	Value	Year	Tons at 60% WO_3	Value

VANADIUM

Bibliography: Reports XV, XXVI. Bulletins 67, 91. Proc. Colo. Sci. Soc., Vol. XI. U. S. Bur. of Mines, Bulletin 104.

No commercial production of vanadium has yet been made in California. Occurrences of this metal have been found at Camp Signal, near Goffs, in San Bernardino County, and two companies at one time did considerable development work in the endeavor to open up paying quantities. Some ore carrying lead vanadate has been developed in the 29 Palms, or Washington district, on the line between Riverside and San Bernardino counties, but no shipments reported.

¹ U. S. G. S. Bull. 652, p. 32.

The principal use of vanadium is as an alloy in steels, especially in tool steel, and in those varieties where resistance to repeated strains is required. Present (May 2, 1940) New York quotations for ferro-vanadium are \$2.70-\$2.90 per pound of vanadium f.o.b. works, and vanadium ore 27¢ per pound V_2O_5 contained.

ZINC

Bibliography: State Mineralogist Reports XIV, XV, XVII, XVIII, XX-XXIV, XXVI, XXVII, XXX, XXXIII-XXXV) (inc.), Bulletins 38, 67, 91.

The recoverable zinc mined in California during 1939 amounted to 16,390 pounds valued at \$852, compared with 17,554 pounds worth \$843 in 1938. The 1939 output came from properties in Inyo, Orange, and San Bernardino counties.

The zinc ores of Shasta and Calaveras counties are associated with copper, while those of Inyo, Los Angeles, and San Bernardino are associated principally with lead-silver and zinc-silver ores.

The production of metallic zinc ¹ at reduction plants in the United States during 1939 amounted to 557,664 short tons valued at \$57,997,000, of which 16,178 tons were reduced from foreign ores and 50,428 tons from secondary metal. The 1939 output was an increase in both amount and value as compared with that of 1938, which was 477,954 tons worth \$45,884,000.

The average price per pound for zinc in 1939 was 5.2¢ compared with 4.8¢ in 1938; 6.5¢ in 1937; 5¢ in 1936; 4¢ in 1935; and 4.3¢ in 1934.

Total Zinc Production of California.

Total figures for zinc output of the State are as follows, commercial production dating back only to 1906:

Year	Pounds	Value	Year	Pounds	Value
1906.....	206,000	\$12,566	1923.....		
1907.....	177,759	10,598	1924.....	3,060,000	\$198,900

CHAPTER FOUR

STRUCTURAL MATERIALS

Bibliography: State Mineralogist Reports XII-XXXV (inc.). Bulletin 38. Spurr and Wormser, "Marketing of Metals and Minerals." "Non-Metallic Minerals," by R. B. Ladoo. "Industrial Minerals and Rocks," A. I. M. E., 1937. See also under each substance.

As indicated by this subdivision heading, the mineral substances herein considered are those more or less directly used in building and structural work. California is independent, so far as these are concerned, and almost any reasonable construction can be made with materials produced in the State. Chromite, which previous to 1933 was listed under structural materials in the statistical reports of the State Division of Mines, is now transferred to the metals group, thus coinciding with the practice of the United States Bureau of Mines.

This branch of the mineral industry for 1939 was valued at \$30,373,840 as compared with a total of \$30,880,924 for the year 1938. Materials grouped under this classification showing increased values in 1939 were brick and building tile, lime, cement, granite, magnesite, marble, sandstone and slate.

In 1938 all counties contributed to this structural total. There is not a county in the fifty-eight counties of the State which is not capable of producing at least one of the materials under the classification.

The following summary shows the value of the structural materials produced in California during the years 1938-1939, with increases or decreases in each instance:

Substance	1938		1939		Increase + Decrease— Value
	Amount	Value	Amount	Value	
Bituminous rock.....			16,546 tons	\$63,612	
Brick and hollow building tile.....		\$2,594,546		3,063,660	\$469,114—
Cement.....	10,561,037 bbls.	15,502,574	10,984,033 bbls.	15,616,219	113,645+
Granite.....		131,386		145,194	13,808+
Lime.....	70,078 tons	683,403	87,288 tons	849,122	165,719+
Marble.....		6,015		14,822	8,807+
Sandstone.....		9,384		12,494	3,110+
Slate.....	6,871 tons	30,281	5,777 tons	28,327	1,954+
Stone, miscellaneous.....		11,734,038	18,681,305 tons	10,316,787	1,417,251—
Unapportioned.....		^b 189,297		^c 263,603	74,306+
Total values.....		\$30,880,924		\$30,373,840	
Net decrease.....					\$507,084

^a Includes onyx and travertine.

^b Includes bituminous rock, magnesite, paving blocks, serpentine, tube-mill pebbles.

^c Includes magnesite, paving blocks, tube-mill pebbles.

ASPHALT

Bibliography: State Mineralogist Reports VII, X, XII-XV (inc.), XVII, XVIII. Bulletins 16, 32, 63, 67, 69, 91.

Asphalt was for a number of years accounted for in the statistical reports by the State Mining Bureau, because in the early days of the oil industry, considerable asphalt was produced from outcroppings of oil sand, and was a separate industry from the production of oil itself. However, at the present time most of the asphalt comes from the oil refineries, which produce a better and more uniform grade; hence, its value is not now included in the mineral total, as to do so would be in part a duplication of the crude petroleum figures. Such natural asphalt as is at present mined is in the form of bituminous sandstones, and is recorded under that designation.

BITUMINOUS ROCK

Bibliography: State Mineralogist Reports XII, XIII, XV, XVII, XVIII, XXI, XXII, XXV, XXVI, XXXI.

This material is essentially an uncemented sandstone which is saturated with and held together by a natural asphaltic constituent, probably the residue from the evaporation of a crude petroleum deposit. Bituminous rock is still used to a limited extent for road dressing in those districts adjacent to available deposits, though the manufacture of asphalt at the oil refineries has almost entirely superseded the direct use of the native material. Some of the Santa Cruz County production is put on the market as a material which can be laid cold. This material is especially applicable and valuable for patch jobs.

During 1939 the output of bituminous rock amounted to 16,546 short tons valued at \$63,612, coming from two properties in Santa Barbara County and one in Santa Cruz County. The 1939 production was a decrease in amount and value as compared with that of 1938. The figures for 1938 were concealed under the 'Unapportioned' item so as not to reveal the annual output of a single operator in each Santa Barbara and Santa Cruz county. The total of the 1937 and 1938 yield was 36,128 tons worth \$139,242.

Bituminous Rock Production of California, by Years.

The following tabulation shows the total amount and value of bituminous rock quarried and sold in California, from the records compiled by the State Mining Bureau, annually since 1887:

Year	Tons	Value	Year	Tons	Value
1887	36,000	\$160,000	1914	66,119	\$166,618
1888	50,000	257,000	1915	17,789	61,468
1889	40,000	170,000	1916	19,449	66,561
1890	40,000	170,000	1917	5,590	18,580
1891	39,962	154,164	1918	2,561	9,067
1892	24,000	72,000	1919	4,614	18,537

BRICK AND HOLLOW TILE

Bibliography: State Mineralogist Reports VIII, X, XII-XV (inc.), XVII-XXVIII (inc.), XXXII. Bulletins 38, 99. Preliminary Report No. 7. Cal. Jour. of Development, June, 1925, pp. 5-6.

Bricks of many varieties and in important quantities are annually produced in California, as might be expected in a state with such diversified and widespread mineral resources. The varieties include common, fire, pressed, glazed, enamel, fancy, vitrified, sand-lime, and others. Not only do the plants here supply practically all of our own requirements in these products, but considerable quantities are shipped to contiguous territory and certain products are shipped over a much wider radius. We also include under this heading the various forms of hollow building 'tile' or blocks.

The 1939 output of all kinds of brick in California showed an increase in value of 18 per cent and in amount of 16 per cent as compared with that of 1938. The 1939 production consisted of 126,999 M. of common brick valued at \$1,419,914; 17,263 M. of fire brick valued at \$1,186,147; 6,241 M. of glazed, pressed, fancy, and vitrified paving brick valued at \$200,319; and 16,283 tons of hollow building tile valued at \$257,280; which gave a total value for the year for brick and hollow building tile of \$3,063,660. The 1938 output had a total value of \$2,594,546.

Los Angeles County had the largest production of brick and hollow building tile in 1939 with 16 companies producing 66,390 M. of common brick valued at \$757,668; 7,769 M. of fire brick valued at \$556,630; 2,131 M. of glazed, pressed, and fancy brick valued at \$62,941; and 1,862 tons of hollow building tile valued at \$20,393. Contra Costa County with three plants operating had an output of brick and hollow building tile worth \$695,508. There were two operating plants each

in Alameda, Kern, Sacramento, San Diego, San Joaquin, Santa Barbara, and Santa Clara counties and one each in Amador, Fresno, Humboldt, Orange, Placer, Riverside, San Bernardino, San Luis Obispo, and Tulare counties. Included in the output of Alameda County was some face hollow building-tile.

Brick and Hollow-Tile Production of California, by Years.

Record of brick production in the state has been kept since 1893 by this Bureau, the figures for hollow building 'tile' or blocks being also included since 1914. The annual and total figures, for amount and value, are given in the following table:

Year	Brick, M	Hollow building blocks, tons	Value
1893.....	103,900		\$801,750
1894.....	81,675		457,125
1895.....	131,772		672,360
1896.....	24,000		524,740

CEMENT

Bibliography: State Mineralogist Reports VIII, IX, XII, XIV, XV, XVII, XVIII, XXI-XXVIII (inc.), XXXII. Bulletin 38.

During 1939 there was a production of 10,984,033 barrels of cement in California valued at \$15,616,219 f.o.b. plant; of which 4,645,901 barrels came from northern California plants and 6,338,132

barrels from southern California plants. The 1939 output showed a slight increase in both amount and value as compared with that of 1938 which was 10,561,037 barrels worth \$15,502,574.

Shipments during 1939 were made from ten plants in nine counties to the extent of 11,219,575 barrels valued at \$16,015,655, as compared with 10,594,706 barrels worth \$15,567,295.

There were five plants in operation in northern California—one each in Calaveras, Contra Costa, Merced, San Mateo, Santa Cruz counties, which shipped 785,901 barrels of cement; and five plants in southern California, two in San Bernardino County and one each in Kern, Los Angeles¹ and Riverside counties, which shipped 7,747,301 barrels of cement. There were 1825 men employed in the above plants during the year 1939.

Cement Production of California, by Years.

'Portland' cement was first commercially produced in California in 1891; though in 1860 and for several years following, a natural hydraulic cement from Benicia was utilized in building operations in San Francisco.

Photo by Walter W. Bradley

Riverside Portland Cement Co. plant at Crestmore, Riverside County

"The Benicia Cement Company in 1859-60 was turning out 50 to 100 barrels of cement a day and San Francisco was using about 12,000 barrels a year. The mill price of the product was then \$4 a barrel. By 1865, the San Francisco rate of consumption had increased to 100,000 barrels yearly, brick buildings largely taking the place of frame struc-

¹ The plant in Los Angeles County grinds clinker coming from other counties, therefore the crude material is credited to the point of origin.

tures, and the price of cement had fallen to \$2.50 a barrel, about the same as it is today.¹

The growth of the industry became rapid after 1902; since which time cement has continued to be an important factor in the industrial life of the State. Although the total cement figures, to date, are not of the same magnitude as those for gold and petroleum, it is interesting to note that the value of California's cement yield in the period 1920-1931 annually exceeded the value of her gold output.

Cement Production of California, by Years

GRANITE

Bibliography: State Mineralogist Reports X, XII-XXVI (inc.), XXVIII, XXXI, XXXV. Bulletin 38.

The 1939 output of granite in California amounted to 34,106 cu. ft. of building stone valued at \$94,178; 13,787 cu. ft. of monumental stone valued at \$37,323; 1,500 linear ft. of curbing valued at \$3,000; 124,778 cu. ft. of unclassified material including tuff, volcanic rock, and a small amount of mica schist which were used for building stone and flagstone, having a value of \$10,693; and giving a total value for the year's yield at \$145,194. This was an increase over the 1938 value, which was \$131,386. The 1939 output came from 15 quarries in 13 counties, of which there were two each in San Diego and Sonoma counties and one each in Fresno, Los Angeles, Madera, Mariposa, Nevada, Placer, Riverside, Sacramento, Shasta, Ventura, and Tuolumne counties.

The material from Los Angeles was a mica schist; that from Sonoma County a tuff and that from Shasta and Ventura counties a volcanic rock.

So far as possible, granite production has been segregated in the statement herewith into the various uses to which the product was put.

¹ Monthly Review of Mercantile Trust Co. of Calif., Vol. XIII, No. 3, p. 55, Mar. 1924.

It will be noted, however, that a portion of the output has been entered under the heading 'Unclassified.' This is necessary because of the fact that some of the producers have no way of telling to what specific use their stone was put after they had quarried and sold the same in the rough.

Varieties.

For building purposes, the granite found in California, particularly the varieties from Raymond in Madera County, Rocklin in Placer County and near Porterville in Tulare County, are unexcelled by any similar stone found elsewhere. The quantities available, notable at Raymond and Porterville, are unlimited. Most of California's 'granite,' particularly that found in the Sierra Nevada Mountains, is technically 'granodiorite' (that is, both plagioclase and orthoclase feldspars are present).

Granites of excellent quality for building and ornamental purposes are also quarried in Riverside, San Bernardino, and San Diego counties. Near Lakeside, San Diego County, there is a fine-grained, 'silver gray' granite of uniform texture and color, especially suited for monumental and ornamental work.

The Fresno County stone is a dark, hornblende diorite, locally called 'black granite,' whose color permits of a fine contrast of polished and unpolished surfaces, making it particularly suitable for monumental and decorative purposes. There is also similar 'black granite' in Tulare County, near Success.

Granite Production of California, by Years.

The value of granite produced, annually, since 1887 has been as follows:

Year	Value	Year	Value
1887.....	\$150,000	1914.....	\$628,786
1888.....	57,000	1915.....	227,928

LIME

Bibliography: State Mineralogist's Reports XIV, XV, XVII-XXIX (inc.), XXXIII-XXXV (inc.), Bulletin 38.

In California during 1939 there was an output of lime amounting to 87,288 short tons valued at \$849,122 coming from two plants each in El Dorado and San Bernardino counties; and one each in Alameda, Inyo, Santa Cruz, and Tuolumne counties. The above figures showed an increase in both amount and value over those of 1938 which were 70,578 tons worth \$682,403. The 1939 figures on lime were the largest of any annual output on record for California.

So far as we have been able to segregate the data, these figures include mainly only such lime as is used in building operations; though they do include a small proportion of calcined lime employed in agriculture and the chemical industries, the figures for which were not separable. A portion is hydrated lime. Limestone utilized in sugar making, for smelter flux, as a fertilizer, and other special industrial uses, is classified under 'Industrial Materials.' That consumed in cement manufacture is included in the value of cement.

Lime Production of California, by Years.

The following tabulation gives the amounts and value of lime produced in California by years since 1894 when compilation of such records was begun by the State Mining Bureau. The figures for quantity have been recalculated from 'barrels,' as shown in the earlier reports, to 'tons' for the years 1894-1922 (inc.):

Year	Tons	Value	Year	Tons	Value
1894	37,350	\$318,700	1918	43,684	\$461,315
1895	39,776	386,094	1919	42,070	552,043
1896	30,275	261,505	1920	46,314	557,232
1897	28,780	252,900	1921	46,353	610,619
1898	29,786	254,010	1922	57,875	671,747
1899	29,985	314,575	1923	70,894	788,834

MAGNESITE

Bibliography: State Mineralogist Reports XII-XV (inc.), XVII-XXVII (inc.), XXX, XXXI, XXXIV. Bulletins 38, 79, 91. U. S. Geol. Surv., Bulletins 355, 540. Min. Res. 1913, Pt. II, pp. 450-453. Min. & Sci. Press, Vol. 114, p. 237. "Magnesite"—Hearings before Comm. on Ways and Means, House of Repr., on H. R. 5218, June 16, 17, and July 17, 1919. Eng. Soc. W.

Penn., Proc. 1913, Vol. 29, pp. 305-388, 418-444. Eng. & Min. Jour.-Pres., Vol. 114, July 29, and Dec. 2, 1922. U. S. Tariff Comm., "Crude and Caustic Calcined Magnesite. A Preliminary Statement of Information," May 19, 1926.

The production of crude magnesite in California during 1939 came from a single property each in Santa Clara and Stanislaus counties, both being operated by the same company. The annual details are concealed under the 'Unapportioned' item so as not to reveal the output of this single operator. Practically all was shipped in the calcined form.

The output for 1939 showed an increase in both amount and value over that of 1938. The 1938-1939 production showed a total of 47,954 short tons of crude magnesite valued at \$375,005, of which only a small amount was sold as such. Most of this material was calcined. The operators reports showed that a total of 36,758 short tons of calcined material valued at \$987,370, rail-shipping point, was made during 1938-1939 and was both deadburned for refractories and material for the plastic trade.

In California the known deposits are mostly in the metamorphic rocks of the Coast Ranges and the Sierra Nevada, being associated with serpentine areas. The notable exceptions are the sedimentary deposits at Bissell in Kern County and at Afton in San Bernardino County. Several thousand tons have been shipped from the Bissell deposit; and small shipments have been made from the Afton property. Beginning in 1938, a portion of the market for calcined magnesite is being supplied by magnesium oxide produced from salt-works bitterns at a plant at Newark, Alameda County, on San Francisco Bay. The figures for the crude of above tonnage are included under those for magnesium salts in the Salines chapter.

Imports.

The tariff act of 1930 placed the following import duties on magnesite: Crude magnesite 15/32¢ per lb., caustic calcined magnesite 15/16¢ per lb., dead-burned and grain magnesite, not suitable for manufacture into oxychloride cements, 23/40¢ per lb.; magnesite brick ¾¢ per lb., and 10 per cent ad valorem. The figures of imports for 1939, as published by the U. S. Bureau of Foreign and Domestic Commerce, show a total of 47,206 short tons valued at \$858,004 as compared with 26,479 short tons worth \$376,397 in 1938.

Total Magnesite Production of California.

The first commercial production of magnesite in California was made in the latter part of 1886 from the Cedar Mountain district,¹ southeast of Livermore, Alameda County. Shipments amounting to 'several tons' or 'several carloads' were sent by rail to New York; but there is apparently no exact record of the amount for that first year. The statistical records of the State Mining Bureau began with the year 1887, and the table herewith shows the figures for amount and value, annually, from that time. Shipments of magnesite from

¹ See U. S. Geol. Surv.; Mineral Resources of U. S., 1886, pp. 6 and 696.

Napa County began in 1891 from the Snowflake Mine; from the Red Mountain deposits in Santa Clara County, in 1899; and from Tulare County in 1900.

MARBLE

Bibliography: State Mineralogist Reports XII-XV (inc.), XVII-XXX (inc.), XXXIV, XXXV. Bulletin 38. U. S. Bur. of Mines Bull. 106.

The 1939 production of marble in California was valued at \$14,822 (including some onyx and travertine from Solano County, and a small amount of limestone used as building stone and flagstone coming from a single operator each in San Luis Obispo and Santa Barbara counties). The marble came from a single quarry each in San Bernardino and Tuolumne counties. The 1939 output showed an increase in value over that of 1938 which was \$6,015.

California has many beautiful and serviceable varieties of marble, suitable for almost any conceivable purpose of construction or decoration. In the decorative class are deposits of onyx marble of beautiful coloring and effects. There is also serpentine marble suitable for electrical switchboard use.

Marble Production of California, by Years.

Data on annual production since 1887, as compiled by the State Mining Bureau, follows. Previous to 1894 no records of amounts were preserved.

ONYX and TRAVERTINE

Bibliography: State Mineralogist Reports XII-XV (inc.), XVII, XVIII, XXI, XXIII, XXXI, XXXIV. Bulletin 38.

Onyx and travertine are known to exist in a number of places in California, but there has been only a small and irregular production since the year 1896. In 1939 there was one producer of onyx in Solano County. The 1938 output showed a decrease in both quantity and value from that 1937, the figures of which are combined with marble. This material is used in terrazzo, auto gear-shift handles, bases for fountain-pen sets, and other ornamental purposes.

Onyx Production of California, by Years.

Production by years has been as follows:

SANDSTONE

Bibliography: State Mineralogist Reports XII-XV, XVII, XVIII, XXI, XXIII, XXVI-XXVIII (inc.), XXXIV, XXXV. Bulletin 38. U. S. Bur. of Mines, Bull. 124.

An unlimited amount of high-grade sandstone is available in California, but the wide use of concrete in buildings of every character, as well as the popularity of a lighter-colored building stone, has curtailed production in this branch of the mineral industry during recent years almost to the vanishing point. In 1939 a total of 54,380 cu. ft. of sandstone valued at \$12,494 was quarried in California and came from three properties in Monterey County and one each in Colusa, Los Angeles, and Napa counties.

Practically all of the material was flagstone which is used in garden walks, fountains, walls and fireplaces to give effect to Spanish and English types of homes. The material reported from Monterey county is in reality an indurated shale of the Monterey series, of a cream color and utilized as a building stone. Part of the material coming from Los Angeles County was schist and indurated shale.

Sandstone Production of California, by Years.

Amount and value, so far as contained in the records of this Bureau, are presented herewith, with total value from 1887 to date:

Year	Cubic feet	Value	Year	Cubic feet	Value
1887		\$175,000	1914	111,691	\$45,322
1888		150,000	1915	63,350	8,438
1889		175,598	1916	17,270	10,271
1890		100,000	1917	31,090	7,074
1891		100,000	1918	900	400
1892		50,000	1919	5,400	3,720
1893		26,314	1920	10,500	2,300
1894		113,592	1921	10,150	2,112
1895		35,373	1922	900	1,100
1896		28,379	1923	7,000	13,000
1897		24,086	1924	6,700	3,600

1913	62,227	27,870			
			Total value		\$4,624,665

SERPENTINE

Bibliography: State Mineralogist Report XV. Bulletin 38.

Serpentine has not been produced in California to a very large extent at any time. A single deposit, that on Santa Catalina Island, has yielded the principal output to date. Some material was shipped from there in 1917 and 1918, being the only output recorded since 1907. It was used for decorative building purposes and for electrical switch-

boards. As there was but a single operator, the figures were combined with those of marble output for those years.

The production of serpentine prior to 1919 was 'verde antique' which is used as an ornamental stone and often classed as a marble. In recent years experimental tests have proved several possible commercial applications to which this mineral might be put such as an admix in cement, in the manufacture of magnesium chemicals, in terrazzo, as a substitute for soapstone, and as a filler. During 1938 there was a small shipment of serpentine from one property in San Bernardino County. The annual details are concealed in the 'Unapportioned' item so as not to reveal the output of an individual.

Serpentine Production of California, by Years.

The following table shows the amount and value of serpentine from 1895 as recorded by this bureau:

Serpentine Production in California, by Years

Year	Cubic feet	Value	Year	Cubic feet	Value
1895-----	4,000	\$4,000	1905-----		
1896-----	1,500	6,000	1906-----	847	\$1,694
1897-----	2,500	2,500	1907-----	1,000	3,000

SLATE

Bibliography: State Mineralogist Reports XV, XVIII, XXIV, XXVIII, XXXIV. Bulletin 38. U. S. Geol. Surv., Bull. 586. U. S. Bur. of Mines, Bull. 218.

Slate was first produced in California in 1889. Up to and including 1910 such production was continuous, but since then it has been irregular. Large deposits of excellent quality are known in the State, especially in El Dorado, Calaveras and Mariposa counties, but the demand has been light owing principally to competition of cheaper roofing materials.

The production of salt in California during 1939 amounted to 5,777 short tons, having a total value of \$28,329 f.o.b. quarry and came from properties in Calaveras, El Dorado, Los Angeles, and Tuolumne counties. The 1939 figures showed a decrease in both amount and value over those of 1938 which were 6,871 tons at \$30,281. Practically all the slate was crushed and used for roofing granules. The slate from Los Angeles County was sold as flagstone.

Total Production of Slate in California.

A complete record of amount and value of slate produced in California follows:

Year	Squares	Value	Year	Squares	Value
1889.....	4,500	\$18,089	1911.....

MISCELLANEOUS STONE

Bibliography: State Mineralogist Reports XII-XXVIII (inc.), XXXI-XXXII, XXXV. Bulletin 38; also annual statistical bulletins from 1915 to date.

'Miscellaneous stone' is the name used throughout this report as the title for that branch of the mineral industry covering crushed rock of all kinds, paving blocks, sand and gravel, and pebbles for grinding mills. The foregoing are very closely related from the standpoint of the producer; therefore it has been found to be most satisfactory to group these items as has been done in recent reports of this Bureau. So far as it has been possible to do so, crushed rock production has been subdivided into the various uses to which the product was put. It will be noted, however, a very large percentage of the output has been tabulated under the heading 'Unclassified.' This is necessary because of the fact that many of the producers have no way of telling to what specific use their rock was put (or at least the proportions to each use) after they have quarried and sold the same to distributors and contractors.

In addition to amounts produced by commercial firms, both corporations and individuals, there is hardly a county in the State but uses more or less gravel and broken rocks on its roads. Of much of this, particularly in the country districts, there is no definite record kept.

During 1939 there was a total value of \$10,316,787 for 'miscellaneous stone,' compared with \$11,734,038 for 1938. As in the past Los Angeles County led in annual output of these products, its 1939 yield being worth \$2,921,561; Alameda County second with an output worth \$1,325,914; San Diego County third with an output worth \$358,557; followed in turn by Contra Costa, Santa Cruz, Fresno, Sonoma, Napa, Riverside, Shasta, Mariposa, and Santa Clara counties.

Paving Blocks.

There was a small output of paving blocks in California during 1939 coming from a single property in Sacramento County. The annual details are concealed under the 'Unapportioned' item so as not to reveal production of either operator.

The paving block industry has decreased materially of recent years, practically to the vanishing point, because of the increased construction of smoother pavements demanded by motor vehicle traffic. The blocks made in Solano County were of basalt; those from Sonoma are of basalt, andesite, and some trachyte, while those from Madera, Placer, Riverside, San Bernardino, and San Diego are of granite; and those from San Mateo County a sandstone.

The amount and value of paving block production, annually, since 1887 has been as follows:

Year	Amount M	Value	Year	Amount M	Value
1887.....	*10,000	\$350,000	1913.....	6,364	\$363,535
1888.....	10,500	367,500	1914.....	6,053	270,598
1889.....	7,303	297,236	1915.....	3,285	171,092

1927.....	288	1,800	Totals.....	63,652	\$250,209

^a Annual details concealed under 'Unapportioned.'

Sand and Gravel.

A considerable part of the gravel excavated is passed through grading and washing plants, and the material over 2 inches in size is crushed. Much of it is utilized in concrete mixtures. Most of the gravel used for road surfacing and repairs as well as that for railroad ballast is creek-run or pit-run material which is spread upon the roads without undergoing any grading or washing.

The distribution of the 1939 output of sand and gravel by counties is given in the following table:

County	Tons	Value
Alameda ^a	1,723,581	\$1,048,139
Amador.....	9,699	3,300
Butte.....	109,144	72,321

Totals.....	12,643,572	\$6,392,617

^a Combined to conceal the output of individual operators in each.

^a Includes molding sand.

^b Includes blast sand.

^c Includes filter sand.

Included in the above is a total of 25,983 tons of molding sand valued at \$53,890 coming from two properties in Contra Costa County; and one each in Alameda, Monterey, Riverside, Sacramento, San Diego, San Mateo, and Ventura counties. The 1939 yield showed a decrease compared with 1938 which was 32,691 tons worth \$90,288.

Crushed Rock.

To list the kinds and varieties of rock utilized commercially under this heading would be to run almost the entire gamut of the classification scale. Much depends on the kind available in a given district. Those which give the most satisfactory service are the basalts and other hard, dense, igneous rocks which break with sharp, clean edges. In many localities, river-wash boulders form an important source of such material. In such cases, combined crushing and washing plants obtain varying amounts of sand and gravel along with the crushed sizes. In Sacramento and Butte counties the tailings piles from the gold dredgers are the basis of like operations.

The values given are based on the selling price, f.o.b. cars, barges, or trucks, at the quarry.

MINERAL PRODUCTION OF CALIFORNIA

1914	9,288,397	3,960,973	1938	19,051,677	11,734,038
1915	10,879,497	4,609,278	1939	18,693,896	10,316,787
1916	9,951,089	4,009,590	Totals	477,206,058	\$319,115,668

A comparison of the above table of annual production of these materials with the similar table for cement (see *ante*) reveals the fact that the important growth of the crushed rock and gravel business was coincident with the rapid development of the cement industry from the year 1902.

CHAPTER FIVE

INDUSTRIAL MATERIALS

Bibliography: State Mineralogist Reports XII-XXXV (inc.). Bulletin 38. Min. & Sci. Press, Vol. 114, March 10, 1917. Spurr and Wormser, "Marketing of Metals and Minerals." "Non-Metallic Minerals," by R. B. Ladoo. "Industrial Minerals and Rocks," A. I. M. E., 1937. See also under each substance.

The following mineral substances have been arbitrarily arranged under the general heading of 'Industrial Materials,' as distinguished from those which have clearly a defined classification, such as metals, salines, structural materials, etc.

These materials, many of which are mineral earths, are, with four or five exceptions, as yet produced on a comparatively small scale. The possibilities of development along several of these lines are large, and with increasing transportation and other facilities, together with steadily growing demands, the future for this branch of the mineral industry in California is promising. There is scarcely a county in the State but might contribute to the output.

Up to within the last few years, at least, production has been in the majority of instances dependent upon more or less of a strictly local market, and the annual tables show the results of such a condition, not only in the widely varying amounts of a certain material produced from year to year, but in widely varying prices of the same material.

The more important of these minerals thus far exploited, so far as shown by value of the output, are barytes, bentonite (fuller's earth), pottery clay, diatomite, dolomite, gypsum, limestone, mineral water, pumice and volcanic ash, pyrite, silica, and soapstone and talc.

In 1937 the mineral zircon was added to this group. The material mined was used as an abrasive and a refractory.

This group as a whole showed an increase in total value from \$5,027,093 in 1938 to \$5,622,449 in 1939.

The following table gives the comparative figures for the amounts and value of industrial minerals produced in California during the years 1938 and 1939:

Substance	1938		1939		Increase + Decrease— Value
	Amount	Value	Amount	Value	
Bentonite.....	9,374 tons	\$113,164	11,284 tons	\$138,854	25,690+
Clay (pottery).....	304,564 tons	582,608	305,517 tons	611,599	28,991+
Dolomite.....	*	*	17,791 tons	40,391	* +
Feldspar.....	*	*	2,076 tons	12,510	* +
Gems.....		4,575		2,500	2,075-
Gypsum.....	161,996 tons	327,821	219,671 tons	437,343	109,522+
Limestone.....	302,655 tons	729,149	316,029 tons	835,235	109,086+
Mineral water.....	26,900,959 gals.	853,998	16,678,741 gals.	735,988	118,010-
Pumice and volcanic ash.....	18,783 tons	105,207	41,109 tons	159,951	54,744+
Silica (sand and quartz).....	63,167 tons	278,676	86,229 tons	349,074	70,398+
Soapstone and talc.....	28,346 tons	290,810	31,820 tons	372,078	81,368+
Sulphur.....	*	*	4,811 tons	73,741	* +
Unapportioned.....		\$1,741,085		\$1,850,185	109,100+
Total values.....		\$5,027,093		\$5,622,449	
Net increase.....					\$595,356

* Included under 'Unapportioned.'

^b Includes barite, calcium silicate, carbon dioxide, garnets (abrasive), lithia, pyrite, sillimanite-andalusite-kyanite group.

ASBESTOS

Bibliography: State Mineralogist Reports XII-XIX (inc.), XXII, XXVII (inc.), XXIX, XXXI-XXXII, XXXIV-XXXV. Bulletins 38, 91. Canadian Dept. of M., Mines Branch Bulletin 69. Min. and Sci. Press, April 10, 1920, pp. 531-533. Eng. & Min. Jour.-Press, Vol. 113, pp. 617-625, 670-677. Asbestology, Vol. 5, No. 7, July, 1927.

During 1939 there was no asbestos reported produced in California. In 1934 there was a small output of this material coming from a property in Napa County, and was used in roofing and plaster. The 1934 annual figures are combined under the 'Unapportioned' item to conceal the output of a single operator.

There are two varieties of asbestos, amphibole and serpentine. The most valuable and widely used is the serpentine or chrysotile variety. Chrysotile asbestos has short strong fibers varying in length from $\frac{1}{8}$ of an inch to three inches but mostly less than one inch. The value of the material varies greatly as to the length of the fiber; the longer demanding a premium. It is used as insulation for heat and electricity, in brake linings, steam packing, pipe coverings, in paint, water proof paper, roofing, cement, stucco, and plasters, in heat resisting textiles, as gloves, curtains, cord, etc.

The amphibole variety may be any one of several minerals of the amphibole group, the fibers of this type are weak and often brittle, and they are much more abundant but their uses are limited and value small; being restricted to heat insulation, chemical filters, and some times as a filler.

Asbestos Production of California, by Years.

Total amount and value of asbestos production in California since 1887, as given in the records of this Bureau, are as follows:

Year	Tons	Value	Year	Tons	Value
1887.....	30	\$1,800	1912.....	90	\$2,700
1888.....	30	1,800	1913.....	47	1,175

BARITE

Bibliography: State Mineralogist Reports XXII, XIV, XV, XVII, XXI-XXVIII (inc.), XXXIV, XXXV. Bulletins 38, 87. Eng. & Min. Jour.-Press, Vol. 114, p. 109, July 15, 1922; Vol. 115, pp. 319-324, Feb. 17, 1923. U. S. Bureau of Mines, Inform. Circ. 6221, 6223.

During 1939 the barite produced in California came from two properties, one each in Mariposa and Nevada counties, the annual details being concealed in the 'Unapportioned' item so as not to reveal the output of either operator. This material was consumed in the manufacture of lithopone, a heavy-gravity oil-well drilling-mud, fillers, and barium chemicals.

Commercial production of barite in California for 1938 and 1939 amounted to a total of 66,228 short tons valued at \$396,218 f.o.b. rail shipping point.

Barite's largest use in the United States is in the manufacture of lithopone, which is a chemically-prepared white pigment containing approximately 70% barium sulphate and 30% zinc sulphide. This is one of the principal constituents of 'flat' wall paints. Other important uses for barite, after washing and grinding, are as an inert pigment and filler in paint, paper, linoleums, oilcloth and rubber manufacture, and in the preparation of a number of chemicals including barium binoxide, carbonate, chloride, nitrate, the sulphate precipitated, or 'blanc fixe,' and in medicine.

The Tariff Act of 1930 placed a duty on foreign imported barite ore, crude or unmanufactured, of \$4 per ton; ground or otherwise manufactured, of \$7.50 per ton.

Present (May 30, 1940) quotations for barite (93% BaSO_4) vary from \$6.00 to \$7.00 per ton, crude, f.o.b. rail shipping point. Most barite has to be washed and acid treated to remove iron stains or other impurities before being suitable for paint use.

Known occurrences of this mineral in California are located in Inyo, Los Angeles, Mariposa, Monterey, Nevada, San Bernardino, Shasta, Santa Barbara and Tulare counties. The deposit at El Portal, in Mariposa County, has given the largest commercial production to date, in part witherite (barium carbonate, BaCO_3). Witherite has also been found in Shasta County, but no shipments have yet been made from the deposit.

Total Barite Production of California.

The first recorded production of barite in California, according to the statistical reports of the State Mining Bureau, was in 1910. The annual figures are as follows:

Year	Tons	Value	Year	Tons	Value
1910.....	860	\$5,640	1925.....		
1911.....	309	2,207	1926.....	4,978	\$38,165
1912.....	564	2,812	1927.....	17,993	90,617
1913.....	1,600	3,680	1928.....	13,406	55,888

* Annual details concealed under 'Unapportioned.'

BENTONITE (Fuller's Earth)

Bibliography: State Mineralogist Reports XIV, XVII, XVIII, XXI, XXIII, XXV-XXVI (inc.), XXXIV. Bulletins 83, 91. U. S. Bureau of Mines, Bulletin 71, Technical Paper 609. Eng. & Min. Jour.-Press, Vol. 121, pp. 837-842, May 22, 1926.

During 1939 there was produced and shipped in California, 11,284 short tons of bentonite (fuller's earth) valued at \$138,854 from eleven properties—seven in San Bernardino, two in Kern, and one each in Inyo and San Benito counties. In 1939 output, as compared with that of 1938 showed an increase in amount and value, which was 9374 tons, worth \$113,164.

Previous to 1931 the Division of Mines classed this material under the heading of 'fuller's earth,' but it was thought advisable to change the name to bentonite, owing to the fact that much bentonite is employed in uses that can not be classed as fuller's earth and therefore had been classified in these reports under pottery clay. This was somewhat confusing. Bentonite is the name commonly applied to the clays of the montmorillonite and halloysite group ('rock soap').

Fuller's earth includes many kinds of unctuous clays. It is usually soft, friable, earthy, nonplastic, white and gray to dark green in color, and some varieties disintegrate in water. Production has come mainly from Calaveras and Solano counties, with other deposits noted also in Riverside, Fresno, Inyo and Kern counties.

The Tariff Act of June 21, 1930, placed a duty of \$1.50 a ton on foreign produced imported fuller's earth.

Bentonite Production of California, by Years.

Bentonite including a small amount of fuller's earth was first produced commercially in this State in 1899, and the total amount and value of the output since that time are as follows:

Year	Tons	Value	Year	Tons	Value
1899.....	620	\$12,400	1920.....	600	\$6,000
1900.....	500	3,750	1921.....	1,185	8,295
1901.....	1,000	19,500	1922.....	6,606	48,756
1902.....	987	19,246	1923.....	3,650	55,125
1903.....	250	4,750	1924.....	5,290	67,295
1904.....	500	9,500	1925.....	5,280	91,842

			Totals.....	212,671	\$2,067,579

CALCIUM SILICATE

Bibliography: State Mineralogist Report XXXIV, Mining and Metallurgy: Oct., 1935.

During 1938 there were commercial shipments of calcium silicate reported in California, coming from two properties in Kern County. The annual details are concealed in the 'Unapportioned' item so as not to reveal the output of either operator.

The first commercial production of wollastonite was made in 1933 from a deposit operated by John T. Thorndyke in the Radamacher District in Kern County, and was shipped from Code's Siding to Los Angeles, where it is used to manufacture mineral wool. This was done by a new process in an electric furnace where the material is melted without the use of a flux and then blown to a fine fiber or wool by compressed air from jets. Mineral wool is an excellent insulating material for sound, heat and cold, and the manufacturer expects to use large quantities in proposed steel houses. This material, also, can be used in the manufacture of unbreakable glass. Experiments now being conducted by Mr. A. M. M. Russell, Testing Engineer of the State Harbor Commissioners, indicate that wollastonite should be a valuable addition to concrete.

Pyroxene is a silicate of calcium and magnesium and is found in crystalline limestone near the contact with intrusive igneous rocks

and in basic igneous rocks such as gabbros. It is white to various shades of green, brown to black, having a hardness of 5 to 6 and a specific gravity 3.2 to 3.6.

Wollastonite is a calcium metasilicate (CaSiO_3) and usually found in crystalline limestone at the contact with intrusive igneous rocks. It is a white to gray mineral, having a hardness of $4\frac{1}{2}$ to 5 and a specific gravity of about 2.9.

Calcium silicate from 1934 to 1936 was classed in these California mineral production reports as wollastonite.

CARBON DIOXIDE GAS

Bibliography: State Mineralogist Report XII.

Carbon dioxide gas was first produced commercially in California in 1894. This material came from a drift on the 575 level of the Santa Isabel shaft of the New Almaden Quicksilver mine at Almaden, Santa Clara County. The drift was bulkheaded and a pipe was placed through the bulkhead for the gas to be drawn off, it then being compressed into cylinders and used in the manufacture of soda water.

In 1933 carbon dioxide gas was again produced, this time from wells drilled near Niland, Imperial County. On November 1, 1934, a dry-ice plant was put into operation for condensation of the carbon dioxide produced from the above wells. During 1939 there were two companies producing carbon dioxide from wells near Niland and one company in Mendocino County produced from springs near Ukiah. The 1938 figures are combined under the 'Unapportioned' item to conceal the output of either operator.

Carbon Dioxide Gas Production in California, by Years

Year	M cubic feet	Value

CLAY (Pottery)

Bibliography: State Mineralogist Reports I, IV, IX, XII-XV, XVIII-XXVIII (inc.), XXX-XXXIII (inc.), XXXV. Bulletins 38, 99. Preliminary Report No. 7. U. S. Bureau of Standards, Tech. Paper No. 262.

At one time or another in the history of the State, pottery clay has been mined in thirty-four of its counties. Of these, 23 contributed in 1939. In this report, 'pottery clay' refers to all clays used in the manufacture of red and brown earthenware, china and sanitary ware, flower pots, floor, faience and ornamental tiling, architectural terra

cotta, sewer pipe, drain and roof tile, etc., and the figures for amount and value are relative to the crude material at the pit, without reference to whether the clay was sold in the crude form or was immediately used in the manufacture of any of the above finished products by the producer. It does not include clay used in making brick and hollow building blocks.

There are many other important uses for clay besides pottery manufacture. Among these may be enumerated paper, cotton goods, and chemicals. Clays of the montmorillonite and halloysite group ('rock soap') are being utilized successfully in the manufacture of soaps and for filtering oils and as oil-well drilling mud, also as an earth filler in irrigating ditches which run through porous ground.

During 1939 there was a total of 57 properties in 23 counties which reported an output of 307,517 short tons of pottery clay valued at \$611,599 f.o.b. rail-shipping point for the crude material, as compared with 54 properties in 22 counties producing 304,564 tons worth \$582,608 in 1938.

Because of the fact that a given product often requires a mixture of several different clays, and that these are not all found in the same pit, it is necessary for most clay-working plants to buy some part of their raw materials from other localities. For these reasons, in compiling the clay industry figures much care is required to avoid duplications. So far as we have been able to segregate the figures, from the data sent in by the operatives, we have credited the clay output to the counties from which the raw material originated; and have deducted tonnages used in brick manufacture, as bricks are classified separately, herein.

A tabulation of the direct returns from the producers, by counties, for the year 1939 is shown herewith:

Pottery Clay in 1939

County	Tons	Value	Used in the manufacture of
Alameda.....	10,434	\$17,073	Roofing, floor, and mantel tile; chimney, drain, and sewer pipe. Prepared clay and various.
Amador.....	37,780	64,147	Architectural terra cotta; fire clay and refractories; chimney, drain and sewer pipe; floor, mantel, and roofing tile; art pottery; electrical porcelain; and various.
Kern.....	23,213	32,373	Floor and fancy tile, sanitary ware, art pottery, China, and oil-well drilling-mud.
Los Angeles.....	17,836	46,272	Red earthenware; chimney, drain and sewer pipe; vents; floor, mantel, and roofing tile; art pottery; and various.
Orange.....	25,599	108,738	Architectural terra cotta; conduits and segment blocks; electrical, porcelain, and chinaware; refractories; vents; drain, floor, and mantel tile; art pottery; and various.
Placer.....	65,322	91,081	Architectural terra cotta; chimney, drain and sewer pipe; faience; floor, mantel, and roofing tile; red earthenware; electrical porcelain; sanitary ware; and various.
Riverside.....	59,030	115,120	Conduit, sewer, and drain pipe; red earthenware; faience, floor, mantel, and roofing tile; and various.
San Bernardino.....	8,924	44,008	Roofing, floor and mantel tile; drain and sewer pipe; red earthenware; refractories; fire-sand and various.
San Diego.....	5,162	5,386	Drain and sewer pipe; floor, mantel and roofing tile; etc.
Calaveras, Contra Costa, Fresno, Humboldt, Marin, Sacramento, San Joaquin, San Luis Obispo ^b , Santa Barbara, Santa Clara, Sonoma, Stanislaus, Sutter, Ventura ^{b*}	52,217 ^a	87,401	Oil-well drilling-mud. Drain, roofing, and mantel tile; saggars; electrical porcelain; refractories; red earthenware; garden furniture; oil-well drilling-mud; sewer, drain, and conduit pipe; prepared clay, light weight aggregate; and various.
Totals.....	305,517	\$611,599	

^a Includes firesand.^b Includes clay and shale used for oil-well drilling-mud.^{*} Combined to conceal the output of single operators in each.

POTTERY CLAY PRODUCTS

The value of various pottery clay products manufactured in California during 1939 totaled \$11,320,683, compared with \$10,437,383 in 1938. The distribution for 1939 is shown in the following tabulation:

Product	Number producers	Tons	Value
Architectural terra cotta.....	4	3,440	\$300,247
Chimney pipe and flue lining.....	10	8,065	295,945
Drain tile.....	18	7,822	127,310
Roofing tile.....	18	32,590	628,713
Floor, faience, mantel and handmade tile.....	25		2,655,320
Sewer pipe.....	8	52,240	1,361,489
Red earthenware.....	5		212,525
Stoneware and chemical stoneware.....	6		464,118
Chinaware.....	5		1,619,064
Electrical porcelain.....	5		158,725
Sanitary ware and plumbing fixtures.....	6		2,383,702
Garden pottery and furniture.....	4		111,845
Art pottery.....	4		207,669
Conduit pipe.....	4	3,775	88,257
Fire clay and high temperature cement.....	7	9,446	127,217
Specialties.....	4		52,943
Miscellaneous: Gas stove vents, grog, tank backs, clay shapes, glazed blocks, ceramic vents, light aggregate, specialties, etc.....	17		525,593
Total value.....			\$11,320,683

Pottery Clay Production of California, by Years.

Amount and value of crude pottery clay output in California since 1887 are given in the following table:

Year	Tons	Value	Year	Tons	Value
1887.....	75,000	\$37,500	1914.....	179,948	\$167,552
1888.....	75,000	37,500	1915.....	157,866	133,724
1889.....	75,000	37,500	1916.....	134,636	146,538
1890.....	100,000	50,000	1917.....	166,298	154,602
1891.....	100,000	50,000	1918.....	112,423	166,788
1892.....	100,000	50,000	1919.....	135,708	245,019
1893.....	24,856	67,284	1920.....	203,997	440,689
1894.....	28,475	35,073	1921.....	225,120	362,172

DIATOMITE (Diatomaceous Earth)

Bibliography: State Mineralogist Reports II, XII-XV (inc.), XVII-XXVIII (inc.), XXXI, XXXIII, XXXV. Bulletins 38, 67, 91. Am. Inst. Min. Eng., Bull. 104, Aug. 1915, pp. 1539-1550. U. S. Bur. of Mines, Rep. of Investigations: Serial No. 2341, Jan. 1923. Eng. & Min. Jour.-Press, Vol. 115, pp. 1152-1154, June 30, 1923.

Diatomite, also known as diatomaceous earth, infusorial earth, tripolite and kieselguhr, is very light (when dry a cubic foot weighs 18 to 20 pounds) and extremely porous, chalk-like material composed of pure silica (chalk, being calcareous) which has been laid down under water and consists of the remains of microscopical infusoria and diatoms. The former are animal remains, and the latter are from plants.

The most important deposits in California thus far known are located in Los Angeles, Monterey, Orange, San Luis Obispo, and Santa Barbara counties. The diatomaceous earth of marine origin has proved of superior quality for filtration uses which bring the higher prices. Infusorial or diatomaceous earths are also found in Fresno, Kern, Plumas, San Benito, San Bernardino, San Joaquin, Shasta, Sonoma, and Tehama counties.

As about 70 per cent of the California output is from a single operator, we have concealed the exact figures under the 'Unapportioned' item in the State and county totals. There were three operators during 1939, one each in Los Angeles, Monterey and Santa Barbara counties. The shipments during the year showed an increase in total tonnage and value compared with 1938.

The material shipped was utilized for insulation of both heat and sound, filtration, paint, pigment, cement admixture, fillers, abrasives and for clarification of gasoline and kerosene.

Total Production of Dolomite in California.

The first recorded production of these materials in California occurred in 1889; total amount and value of output, to date, are as follows:

Year	Tons	Value	Year	Tons	Value
1889.....	39	\$1,335	1915.....	12,400	\$62,000

DOLOMITE

Bibliography: State Mineralogist Reports XV, XVII, XXVII, XXVIII, XXXI, XXXIII-XXXIV.

The 1939 output of dolomite in California came from one property each in Inyo, Los Angeles, Monterey, San Benito, and Tuolumne counties and amounted to a total of 17,791 tons valued at \$40,391. Also not included in the above figures was a tonnage of dolomite burnt for lime, which is included with the lime figures. The 1939 production showed an increase in amount and value as compared with that of 1938.

The material shipped was utilized for steel-furnace flux and refractories, plaster, stucco dash-coat, terrazo, artstone, for the manufacture of CO₂, and mineral wool.

Dolomite Production of California, by Years.

Previous to the 1915 statistical report of the State Mining Bureau, dolomite was included under limestone, as the two minerals are closely related chemically; but since dolomite, as such, has been found to have certain distinctive applications, we here give it a separate classification.

Amount and value of the output of dolomite, annually, have been as follows:

Year	Tons	Value	Year	Tons	Value
1915.....	4,192	\$14,504	1928.....	38,379	\$85,342
1916.....	13,313	46,566	1929.....	58,644	156,928

FELDSPAR

Bibliography: State Mineralogist Reports XV, XVII-XXVIII (inc.), XXX, XXXI, XXXIV-XXXV. Bulletins 67, 91. U. S. Bureau of Mines, Bulletin 92. Eng. & Min. Jour.-Press, Vol. 115, pp. 535-538, Mar. 24, 1923.

The 1939 output of feldspar in California came from two properties in San Diego County and one in Fresno County and amounted to a total of 2,076 short tons valued at \$12,510. The 1939 production was an increase in amount value as compared with 1,378 tons worth \$6,970 in 1938.

The requirements of the pottery trade demand that in general the percentage of free silica associated with the feldspar be less than 20 per cent, and in some cases the potters specify less than 5 per cent. An important factor, also, is the iron-bearing minerals frequently present in pegmatites and granites, such as biotite (black mica), garnet, hornblende and black tourmaline. Feldspar for pottery uses should be practically free of these. The white, potash-mica, muscovite, is not particularly objectionable except that being in thin, flexible plates, it does not readily grind to a fineness required for the feldspar. It is also used in the manufacture of glass, enamel and sanitary ware, in soaps and abrasives, and as a binder for abrasive wheels, etc., all of which have similar specifications to that for pottery.

Total Feldspar Production in California.

Total amount and value of feldspar production in California since the inception of the industry are given in the following table, by years:

Year	Tons	Value	Year	Tons	Value
1910.....	760	\$5,720	1926.....	7,300	\$56,400
1911.....	740	4,560	1927.....	10,932	86,101
1912.....	1,382	6,180	1928.....	14,628	93,745
1913.....	2,129	7,850	1929.....	13,327	78,404

			Totals.....	146,711	\$980,883

* Annual details concealed under 'Unapportioned.'

FLUORSPAR

Bibliography: State Mineralogist Reports XVII, XVIII, XXIV, XXVI. Bulletins 67, 91. Eng. & Min. Jour.-Press, Vol. 177, pp. 489-492, Mar. 22, 1924.

During 1939 there was no commercial production of fluorspar reported in California.

The 1937 output of fluorspar came from a single property in San Bernardino County. The annual details are combined under the 'Unapportioned' item to conceal the output of the operator. This material was shipped to steel mills to be used as a flux. The combined production of 1933 and 1934 amounted to a total of 227 tons worth \$3,631.

Fluorspar, or calcium fluoride, CaF_2 , is one of the most important nonmetallic minerals from an industrial standpoint. About 80 per cent of the commercial mineral is prepared in the 'gravel' form and utilized as a flux in the manufacture of steel, for which use no substitute has yet been found.

In California deposits have been reported in Los Angeles, Mono, Riverside and San Bernardino counties. A previous commercial production was made in 1917-1918, when a total of 79 tons valued at \$991 was shipped from Riverside County.

Present quotations (Metal and Mineral Markets) are: not less than 85 per cent CaF_2 and not over 5 per cent SiO_2 , \$21 per ton; No. 2 lamp, \$21 per ton.

GARNET (Abrasive)

During 1939 there was a shipment of abrasive garnets as a by-product from a tungsten mine near Bishop in Inyo County. This was the first commercial production reported in California. The exact figures are concealed under the 'Unapportioned' item so as not to reveal the output of a single operator.

Most garnets are utilized on paper and cloth used for woodworking and shoe manufacture.

Massive deposits of garnet have been noted in several places in California but little has been done to commercialize them owing to the lack of a market.

GEMS

Bibliography: State Mineralogist Reports II, XIV, XV, XVII, XVIII, XX, XXI-XXVIII (inc.), XXX-XXXII (inc.), XXXIV-XXXV. Bulletins 37, 67, 91. U. S. G. S., 'Mineral Resources of the U. S.'; Bull. 603, p. 208. Bull. Dept. Geo. Univ. of Cal., Vol. 5, pp. 149-153, 331-380. Am. Jour. Sci., Vol. 31, p. 31.

The production of gem materials in California has been somewhat irregular and uncertain since 1911. The compilation of complete statistics is difficult owing to widely-scattered places at which stones are gathered and marketed, for the most part in a small way. The gem material reported mined and sold in California during 1939 had a total value of \$2,500. This output came from Contra Costa, Fresno, Imperial, Modoc, Napa, and San Diego counties and consisted of jasper, kunzite, iceland spar, iridescent obsidian, tourmaline, onyx (chalcedony), topaz, and petrified wood. The above value was a decrease from that of 1938 which was worth \$4,575.

Varieties of California's Gem Stones.

Diamonds have been found in a number of localities in California; but in every case, they have been obtained in stream gravels while working them for gold. The principal districts have been: Volcano in Amador County; Placerville, Smith's Flat and others in El Dorado County; French Corral, Nevada County; Cherokee Flat, Morris Ravine, and Yankee Hill, Butte County; Gopher Hill and upper Spanish Creek, Plumas County. The most productive district of recent years has been Cherokee in Butte County.

California *tourmalines* are decidedly distinctive in coloring and 'fire' as compared to foreign stones of this classification. The colors range from deep ruby to pink, and various shades of green, also blue.

One of our California gem stones, *benitoite*, has not been found elsewhere; and in but a single locality here: The Dallas Mine in San Benito County.

Kunzite, a gem variety of spodumene, was first found in the Pala district in San Diego County. It has thus far been found in only one locality (Madagascar) outside of California. It is of a lilac color, and is described in detail in Bulletin 37 of the State Mining Bureau.

Beryls of excellent fire and delicate colors are also obtained in the Pala district, of which the *aquamarine* (blue) and *morganite* (pink) varieties deserve special mention. Morganite, like kunzite, has thus far been found elsewhere only in Madagascar.

Californite, or 'California jade,' is a gem variety of *vesuvianite*, and is green or white in color. It is found in Butte, Fresno, and Siskiyou counties.

Stones of precious blue *topaz* of fine quality are being cut from crystals mined in northern San Diego County. They are associated with beryl and blue tourmaline.

Some *rhodonite* has been mined in Siskiyou County, and used for decorative purposes, its value being included in the marble figures.

Garnets are found in a number of localities in California; the important yield of gems being *hyacinth* and *spessartite* varieties from San Diego County.

Chrysoprase has been produced in Tulare County.

Turquoise has been found in the desert section of San Bernardino County, but none produced commercially in recent years.

Sapphires have been reported found in San Bernardino and Riverside counties, but not as yet confirmed. A few have been found in stream gravels with diamonds in Butte County.

Rubies have been identified by the laboratory of the State Mining Bureau, occurring in limestone from the Baldy Mountains, San Bernardino County. Thus far no stones of commercial size have been taken out.

Total Production of Gem Materials in California.

The value of the gem output in California annually since the beginning of commercial production is as follows:

Year	Value	Year	Value
1900.....	\$20,500	1921.....	\$10,954
1901.....	40,000	1922.....	1,312
1902.....	162,100	1923.....	13,220
1903.....	110,500	1924.....	4,800
1904.....	136,000	1925.....	10,663

1919.....	5,425		
1920.....	36,056	Total value.....	\$2,269,748

GRAPHITE

Bibliography: State Mineralogist Reports XIII, XIV, XV, XVII, XXVI (inc.), XXX, XXXIII, XXXV. Bulletins 67, 91. U. S. G. S., Min. Res., 1914, Pt. II.

Graphite (also called plumbago) has been produced from time to time in the State, coming principally from Sonoma and Los Angeles counties.

Occurrences of graphite have been reported at various times from Calaveras, Fresno, Imperial, Inyo, Los Angeles, Mendocino, San Bernardino, San Diego, Siskiyou, Sonoma and Tuolumne counties. From 1931 to 1933 there was a small production of graphite from a property in Los Angeles County.

During 1939 no production of graphite was reported in California. In 1935 there was a small output of graphite coming from a single property in Los Angeles County. This material was used for experimental purposes. The annual details are concealed under the 'Unapportioned' item in order not to reveal the output of the single operator.

The principal value of graphite is on account of its infusibility and resistance to the action of molten metals. It is also largely used in the manufacture of electrical appliances, of 'lead' pencils, as a lubricant, as stove polish, paints, and in many other ways. Amorphous graphite, commonly carrying many impurities, brings a much lower price. For some purposes, such as foundry faicings, etc., the low-grade material is satisfactory. Among the interesting uses for graphite is the prevention of formation of scale in boilers. The action is a mechanical one. Being soft and slippery, the graphite prevents the particles of scale from adhering to one another or to the boiler and they are thus easily removed.

Graphite Production of California, by Years.

According to the records of the State Mining Bureau, the graphite production of California, by years, has been as follows:

Year	Pounds	Value	Year	Pounds	Value
1901	128,000	\$4,480	1923		
1902	84,000	1,680	1925		
1903			1926	*76,000	\$13,120
1913	2,500	25	1927		
1914			1928		
1915			1931		
1916	29,190	2,335	1932	*156,000	1,950
1917			1933

* Annual details concealed under 'Unapportioned,' on account of a single producer.

GYPSUM

Bibliography: State Mineralogist Reports XIV, XV, XVII, XVIII, XXII, XXIII, XXV-XXVIII (inc.), XXX, XXXI, XXX-XXXV (inc.). Bulletins 38, 67, 91. U. S. Geol. Surv., Bull. 223, 413, 430, 697. U. S. Bur. of Standards, Circular No. 281.

During 1939 there were shipments of gypsum in California amounting to 219,671 short tons valued at \$437,343, coming from three properties each in Fresno and Kern counties and one each in Imperial, Monterey and Riverside counties. In addition to the above figures, there was a considerable amount of gypsum coming from Alameda County, which was obtained in the chemical process of reducing magnesium salts from bittern water with lime, the amount of which is not included in the above data, as the figures are already contained in those of magnesium salts and lime. The 1939 output was the largest annual recorded in this State and as compared with the 1938, which was 161,996 tons worth \$327,821.

Uses.

The most important use of gypsum from the quantity standpoint is in the calcined form where it is utilized in the manufacture of various hard-wall plasters and plaster board. As plaster of paris, it plays a very important part in surgical work. Approximately 2%, by weight, raw gypsum is added in the manufacture of Portland cement just before the final grinding. In this application, the gypsum acts as a retarder to the set of the cement. The use of gypsum tile for non-bearing fireproof partitions, stairway and elevator enclosures, and the protection of steel columns, girders and beams, has increased greatly.

Photo by W. B. Tucker

Pacific Portland Cement Co. gypsum plant at Plaster City, Imperial County

Keene's cement is a gypsum product, calcined to complete dehydration, and an accelerator added such as alum, potassium sulphate, borax, aluminum sulphate.

Land plaster may be applied to the soil by drilling, or scattered in the hill, or it may be sowed broadcast, in quantities ranging from 200 to 500 pounds to the acre.

Total Production of Gypsum in California.

Production of gypsum annually in California since such records have been compiled by this Bureau is as follows:

Year	Tons	Value	Year	Tons	Value
1887.....	2,700	\$27,000	1914.....	29,734	\$78,375

LIMESTONE

Bibliography: State Mineralogist Reports IV, XII-XV (inc.), XVII-XXXI (inc.), XXXIII-XXXV (inc.). Bulletins 38, 91. Oregon Agr. College Extension Bulletin 305. Eng. and Min. Jour.-Press, Vol. 120, pp. 249-253.

'Industrial' limestone was produced by twenty-two properties in twelve counties in California during 1939 to the amount of 316,029 short tons valued at \$838,235, this being an increase in amount and value over the 1938 figures which were 302,655 tons worth \$729,149. The 1939 yield came from four properties in El Dorado County; three each in San Bernardino, Santa Clara, and Santa Cruz counties; two in Tuolumne County; and one each in Fresno, Imperial, Inyo, Los Angeles, Riverside, San Luis Obispo and San Mateo counties.

The amount here does not include the limestone used in the manufacture of cement nor for macadam and concrete, nor of lime for building purposes; but accounts for that utilized as smelter and foundry flux, for glass and sugar making, and other special chemical and manufacturing processes. It also includes that utilized for fertilizers (agricultural 'lime'), 'roofing gravel,' paint and concrete filler, whitening for paint, putty, kalsomine, terrazzo, paving dust, chicken grit, carbon dioxide gas, 'paving compound,' facing dust for concrete pipe, also for rubber and magnesite mix. The material from Fresno County was marl; and that from San Mateo and Santa Clara counties was shells, dredged from San Francisco Bay, which were ground and used for agricultural purposes and poultry grit. Of the total 'industrial' limestone produced in 1939, approximately 94,396 tons valued at \$346,584 was used for agricultural purposes and poultry grits.

Distribution of the 1939 output of limestone was as follows:

County	Tons	Value
El Dorado.....	146,625	\$320,212
San Bernardino.....	18,710	60,703
Santa Clara ^b	59,151	117,763
Santa Cruz.....	34,837	47,529
Fresno, ^a Imperial, Inyo, Los Angeles, Riverside, San Luis Obispo, San Mateo ^b and Tuolumne *.....	56,706	292,028
Totals.....	316,029	\$838,235

* Combined to conceal the output of individual operators in each.

^a Includes marl.

^b Includes shells.

Limestone Production of California, by Years.

The following tabulation gives the amounts and value of 'industrial' limestone produced in California by years since 1894 when compilation of such records was begun by the State Mining Bureau. These tonnages consist principally of limestone utilized for flux, glass and sugar making, agricultural, chemical, and other special industrial purposes. That utilized in cement manufacture is not included:

Year	Tons	Value	Year	Tons	Value
1894.....	15,420	\$19,275	1918.....	208,566	\$456,258
1895.....	71,355	71,690	1919.....	88,291	248,145
1896.....	68,184	71,112	1920.....	90,120	298,197
1897.....	36,796	38,556	1921.....	75,921	305,912
1898.....	27,686	24,548	1922.....	84,382	282,181
1899.....	30,769	29,185	1923.....	143,266	348,464

LITHIA

Bibliography: State Mineralogist Reports II, IV, XIV, XXI, XXX, XXXV. Bulletins 38, 67, 91.

During 1939 lithium salts were again produced in California; but coming from a single property, the figures are concealed under the 'Unapportioned' item. Starting with 1938, material came from the brines of Searles Lake in San Bernardino County at the plant of the American Potash and Chemical Corporation, in the form of sodium-lithium phosphate, and was the first output of this kind, previous production being the mineral lepidolite.

Lithia mica, lepidolite (a silicate of lithium and others), utilized in the manufacture of artificial mineral water, fireworks, glass, etc., has been mined in San Diego County since 1899, except between 1905 and 1915, though there was none shipped in 1923, 1925, 1929-1937

(inc.). During 1930 there was a small amount of lepidolite mined in California, but none shipped. Some amblygonite, a lithium phosphate, is occasionally also obtained from pockets associated with the gem tourmalines.

Lithia minerals total production in the State has been as follows:

Year	Tons	Value	Year	Tons	Value
1899.....	124	\$4,600	1920.....	10,046	\$153,502

MICA

Bibliography: State Mineralogist Reports II, IV, XXVI-XXVIII (inc.), XXX, XXXIII-XXXV (inc.). Bulletins 38, 67, 91. U. S. Geol. Surv., Bull. 740; Min. Res. of U. S. Eng. & Min. Jour.-Press, Vol. 115, pp. 55-60, Jan. 13, 1923.

Sericite, a fine-grained variety of muscovite, has been produced continuously since 1929 in California with the exception of 1934 and 1939. The 1938 output of mica came from a single property in Imperial County. The annual details are concealed in the 'Unapportioned' item so as not to reveal production of the individual operator. The material mined during the year was sericite. Sericite is used as a cheap grade of ground mica for roofing, as a refractory, foundry facing, and decorative material to imitate snow. A small amount of vermiculite, a hydrous mica, expanded by heating and then used as an insulating agent, was mined in 1936.

Classification and Uses.

Practically all marketable mica is of the muscovite or phlogopite varieties. There are three main commercial classes: Sheet mica, including punch; splittings, and scrap. Sheet mica is used chiefly for electrical purposes and for glazing; splittings are made into built-up mica; scrap is ground to a powder. Mica to be classified as sheet must yield a rectangle of at least $1\frac{1}{2} \times 2$ in., must split evenly and freely, be free from cracks, rulings, or plications, and reasonably free from inclusions of foreign matter, though stains of a nonconducting character are permissible for some uses. Ability to withstand heat and high electrical resistance have led to a wide application of sheet mica in the electrical industries. The electrical uses of sheet mica greatly exceed all others in quantity and value of the material used.

As a heat-resisting transparent medium, sheet mica has various uses. It is widely employed for stove windows, though this use has declined

to a considerable extent. A hard and rigid mica that is nearly clear is best suited for stove fronts. High-grade stove mica commands a higher price than electrical mica, because for the most part larger sizes are demanded. Mica is also used in furnace and bake-oven sight-holes, heat screens, lamp chimneys, canopies and shades, particularly for gas mantels, and also for military lanterns and in lantern slides.

Its ability to withstand shocks and strains, combined with its transparency, has led to wide use in spectacles, drivers' helmets, smoke helmets, compass cards, gage fronts, and in windows subject to shock, as in the conning towers of warships. On account of its heat-resisting qualities, ground mica is used in railroad car axle packings, foundry facing in pipe and boiler coverings, in fireproof paints, and in rubber tires. Ground mica is used as a component in roofing, as a filler in rubber and other products, in foundry facing, calico printing and as a tire powder. It is used also in tinsel decorations, and as 'Santa Claus snow' for Christmas tree and window decorations. It is used as a lubricant for wooden bearings, and mixed with oil for metal bearings.

The vermiculite variety is any of several hydrous mica minerals which expand upon heating. In recent years they have become valuable as an insulating agent for both heat and sound, when being expanded it often takes on a gold or silver color and is in window decoration.

Production of mica in California has been as follows:

Year	Tons	Value	Year	Tons	Value
1902.....	50	\$2,500	1934.....

MINERAL PAINT

Bibliography: State Mineralogist Reports XII-XIX (inc.), XXI, XXII-XXVIII (inc.), XXXV. Bulletins 38, 91.

During 1939 no output of mineral paint was reported in California. In 1937 there was a small amount of mineral paint produced, which came from a single property each in Nevada, Placer and Yuba counties. The details are concealed under 'Unapportioned' so as not to reveal individual output. The material from Nevada and Yuba counties was a limonite and that from Placer County a sienna.

These materials have come from Alameda, Amador, Butte, Calaveras, Colusa, Los Angeles, Napa, Nevada, Placer, Riverside, Shasta, Sonoma, Stanislaus and Ventura counties. There are also other deposits that may have possible commercial value, but as yet there have been no commercial shipments from El Dorado, Imperial, Kern, Kings, Lake, Mendocino, San Diego, Siskiyou, Trinity and Yuba counties, in which they are found.

Mineral Paint Production of California, by Years.

The first recorded production of mineral paint materials in the State was in the year 1890. The output, showing annual amount and value since that time, is given herewith:

Year	Tons	Value	Year	Tons	Value
1890.....	40	\$480	1915.....	311	\$1,756
1891.....	22	880	1916.....	643	3,960
1892.....	25	750	1917.....	520	2,700

MINERAL WATER

Bibliography: State Mineralogist Reports VI, XII-XVIII (inc.), XXI-XXIX (inc.), XXXI, XXXIII (inc.), XXXV. U. S. G. S., Water Supply Paper 338. Min. Res., 1914, 1916. 'Mineral Springs and Health Resorts of California,' by Dr. Winslow Anderson, 1890. U. S. Dept. of Agr., Bur. of Chem., Bulletin 91.

A widespread production of mineral water is shown annually in California. These figures refer to mineral water actually bottled for sale, or for local consumption. Water from some of the springs having a special medicinal value brings a price many times higher than the average shown, while in some cases the water is used merely for drinking purposes and sells for a nominal figure. Health and pleasure resorts are located at many of the springs. The waters of some of the hot springs are not suitable for drinking, but are very efficacious for bathing. From a therapeutic standpoint, California is particularly rich in mineral springs.

The commercial production of mineral water during 1939 amounted to 16,678,741 gallons valued at \$735,988, as compared with 26,900,959 gallons worth \$853,998 in 1938. The 1939 output came from springs on 42 properties in 19 counties and was distributed as follows:

<i>County</i>	<i>Gallons</i>	<i>Value</i>
Lake	23,850	\$7,100
Los Angeles	7,577,237	431,483
Napa	97,750	12,650
San Diego	141,745	5,394
Sonoma	53,860	6,949
Butte, Calaveras, Contra Costa, El Dorado, Fresno, Marin, Modoc, Placer, River- side, San Benito, San Bernardino, San Francisco, San Luis Obispo, Siskiyou * ..	8,784,299	272,412
Totals	16,678,741	\$735,988

* Combined to conceal the output of operators in each.

The production above tabulated came either from springs or artesian wells, and was bottled, in part with artificial carbonation, but mostly natural, and sold for drinking purposes. A large part was used in the preparation of soft drinks with flavors.

Mineral Water Production of California, by Years.

Mineral water was bottled for sale, at the Napa Soda Springs, Napa County, as early as 1856,¹ and at other springs in California, notably The Geysers, Sonoma County, also at early dates; but there are no figures available earlier than the year 1887. Amounts and values, annually, since that year are shown herewith:

<i>Year</i>	<i>Gallons</i>	<i>Value</i>	<i>Year</i>	<i>Gallons</i>	<i>Value</i>
1887	618,162	\$144,368	1914	2,443,572	\$476,169
1888	1,112,202	252,990	1915	2,274,267	467,738
1889	808,625	252,241	1916	2,273,817	410,112
1890	258,722	89,786	1917	1,942,020	340,566
1891	334,553	139,959	1918	1,808,791	375,650
1892	331,875	162,019	1919	2,233,842	340,117

PHOSPHATES

Bibliography: State Mineralogist Report XXI. Bulletins 67, 91.

No commercial production of phosphates has been recorded from California, though occasional pockets of the lithium phosphate, amblygonite, Li (AlF) PO_4 , have been found associated with the gem tourmaline deposits in San Diego County. Such production has been classified under lithia. During 1938, recovery began on a commercial scale of sodium-lithium phosphate at the plant of the American Potash and Chemical Corporation, at Searles Lake, San Bernardino County.

However, the product is sold for its lithium content rather than the phosphate, hence we record it under Lithia.

PUMICE and VOLCANIC ASH

Bibliography: State Mineralogist Reports XII, XIV, XV, XVII, XVIII, XXII-XXV (inc.), XXX-XXXII (inc.), XXXIV, XXXV. Bulletin 38. U. S. Bureau of Mines, I. G. 6560. (See 'Tufa.')

The production of pumice and volcanic ash in California during 1939, amounted to 41,109 short tons valued at \$159,951. This output came from four properties in Siskiyou County; three in Inyo County; two each in Kern, Mono, and Napa counties; and one each in Amador, Modoc and San Luis Obispo counties. The 1939 figures showed an increase in both amount and value over those of 1938, which were 18,783 tons worth \$105,207.

The material from Inyo, Modoc, Mono, Napa and Siskiyou counties was 31,481 tons of lump pumice, which was used in acoustic plaster, light-weight aggregate in concrete, for abrasive purposes, scouring bricks, and for chicken-house litter. That from Amador, Kern, Madera, and San Luis Obispo counties was 9,628 tons of volcanic ash, or tuff variety, and was employed in making soap, cleanser compounds, as a concrete filler in cement displacement, in asphalt, and as a carrier for dry agricultural sprays. The Kern County ash is going into the preparation of one of our popular and nationally advertised brands of cleanser compounds.

Pumice Production of California, by Years.

Commercial production of pumice in California was first reported to the State Mining Bureau in 1909, then not against until 1912, since which year there has been a small annual output, as indicated by the following table:

Year	Tons	Value	Year	Tons	Value
1909.....	50	\$500	1925.....	5,319	\$32,937
1910.....			1926.....	7,170	48,350

PYRITES

Bibliography: State Mineralogist Reports XVIII, XIX, XXII, XXV, XXVI, XXX, XXXV. Bulletins 38, 91. Min. and Sci. Press, Vol. 144, pp. 825, 840.

Pyrite, shipped in California during 1939 came from a single property in Shasta County and showed a decrease in both quantity and

value from that of 1938. The annual details are placed under 'Unapportioned' to conceal the output of the individual operator.

This material was mostly used in the manufacture of sulphuric acid for explosives and fertilizer. Some iron sulphate had been produced previously and was utilized directly in the preparation of an agricultural fertilizer and insecticide. The sulphur content ranged up to 50.8% S.

This does not include the large quantities of pyrite, chalcopyrite, and other sulphides which are otherwise treated for their valuable metal contents. Some sulphuric acid is annually made as a by-product in the course of roasting certain tonnages of Mother Lode auriferous concentrates while under treatment for their precious metal values.

Pyrites Production in California, by Years.

The total recorded pyrites production in California to date is as follows:

Year	Tons	Value	Year	Tons	Value
1898	6,000	\$30,000	1920	146,001	\$530,581
1899	5,400	28,620	1921	110,025	473,735

SHALE OIL

Bibliography: State Mineralogist Report XIX. U. S. Geol. Surv., Bulletins 322, 729. U. S. Bur. of Mines, Bull. 210, Eng. and Min. Jour.-Press, Vol. 118, No. 8, pp. 290-292, Aug. 23, 1924. Chem. & Met. Eng., Vol. 32, No. 6, Feb. 1925. Min. Congress Jour., Dec. 1924.

Two plants on a more or less experimental scale operated for six years in California, with commercial production beginning in a small way in 1922. The product, in part, was sold for utilization as a flotation oil in metallurgical work, and part consumed as fuel at the plants. There has been no production reported since 1927.

SILICA (Sand and Quartz)

Bibliography: State Mineralogist Reports IX, XIV, XV, XVII, XVIII, XX-XXVIII (inc.), XXXI-XXXIII (inc.), XXXV. Bulletins 38, 67, 91.

We combine these materials because of the overlapping roles of vein quartz which is mined for use in glass making and as an abrasive, and that of silica sand which, although mainly utilized in glass manufacture, also serves as an abrasive. Both varieties are also utilized to some extent in fire-brick manufacture.

We do not include under this heading such forms of silica as: quartzite, sandstone, flint, tripoli, diatomaceous earth, nor the gem forms of 'rock crystal,' amethyst, and opal. Each of these has various industrial uses, which are treated under their own designations.

The production of silica in California during 1939 amounted to 86,229 short tons valued at \$349,074 f.o.b. rail shipping point, and came from two properties in Contra Costa County and one each in Orange, Riverside, and San Diego counties. The above was an increase in both amount and value over the output of 1938 which was 63,176 tons worth \$278,676. The 1939 output consisted of 84,979 tons of glass sand and 1250 tons of vein or boulder quartz—and was the largest annual production of silica in this State. This is brought about by increased production of glass sand.

The glass sand came from Contra Costa, Orange and Riverside counties. For making the higher grades of glass, deposits in Contra Costa County are replacing the sand imported from Belgium. Belgium sand has displaced local material in the manufacture of sodium silicate ('water glass'). There are various deposits of quartz in California which could be utilized for glass making, but to date they have not been so used owing to the cost of grinding and the difficulty of preventing contamination by iron while grinding.

Silica sand has been produced in the following counties of the State: Alameda, Amador, Contra Costa, El Dorado, Imperial, Inyo, Los Angeles, Mariposa, Mono, Monterey, Orange, Placer, Riverside, San Diego, San Joaquin and Tulare, the chief centers being Contra Costa, Amador, Monterey and Los Angeles counties. The industry is of limited importance, so far, because of the fact that much of the available material is not of a grade which will produce first-class colorless glass; for such, it must be essentially iron-free. Even a fractional per cent of iron imparts a green color to the glass.

The Tariff Act of June 21, 1930, placed a duty on sand, containing 95 per cent or more of *Silica* and not more than six-tenths of 1 per cent of oxide of iron and suitable for use in the manufacture of glass, of \$2 per ton.

Total Silica Production in California.

Total silica production in California since the inception of the industry, in 1899, is shown below, being mainly sand:

Year	Tons	Value	Year	Tons	Value

SILLIMANITE-ANDALUSITE-KYANITE GROUP

Bibliography: State Mineralogist Reports XX, XXIII, XXIV, XXVII, XXXV. Bulletins 67, 91. Dana's Mineralogy. U. S. Geol. Surv., Prof. Paper 110. U. S. Bureau of Mines, Inform. Circ. 6255. Eng. & Min. Jour.-Press. Vol. 120, pp. 91-94, 1925. Amer. Mineralogist, June, 1924.

Sillimanite and andalusite are both aluminum silicates (Al_2SiO_5), having the same composition and formula, but with slightly different physical characteristics. Though both crystallize in the orthorhombic system, their crystal habits are different. A massive deposit of andalusite, found in Dry Creek Canyon in the White Mountains of the Inyo Range, in Mono County, is being mined by the Champion Spark Plug Company of Detroit, Michigan. The material is shipped East and utilized in the manufacture of porcelain for automobile spark plugs, for other high-tension electric insulators, laboratory ware and porcelain. Porcelain made from these minerals can be subjected to sudden and extreme changes in temperature without damage.

Kyanite is also an aluminum silicate (Al_2SiO_5), of the same chemical composition as andalusite and sillimanite, but crystallizing in the triclinic system. A deposit of kyanite is being mined in Imperial County, near Ogilby, by the Vitrefrax Corporation and shipments made to their refractory plant in Los Angeles.

Dumortierite, though differing somewhat in composition from the above, being a basic aluminum silicate ($\text{HAl}_3\text{BSi}_3\text{O}_{20}$), has proved similar in behavior in ceramic work so that it is now being mixed with

andalusite for electrical porcelains. A deposit of this mineral in Nevada is being mined for that purpose. Occurrences of massive dumortierite are known in Imperial and San Diego counties in this State and there may yet be some commercial possibilities for them.

SOAPSTONE and TALC

Bibliography: State Mineralogist Reports XII, XIV, XV, XVII-XXVII (inc.), XXX, XXXIII-XXXV (inc.). Bulletins 38, 67, 91. U. S. Bur. of Mines, Bulletin 213. Rep. of Investigations, Serial No. 2253, May, 1921.

The total output of talc and soapstone in California during 1939 amounted to 31,820 short tons valued at \$372,078. This was an increase in both quantity and value over the 1938 figures, which were 28,346 tons valued at \$290,810. Of the 1939 production, 30,241 tons were high-grade talc from Inyo and San Bernardino counties, which material was utilized mainly in toilet powders, paint, paper, for rubber manufacture, and some in ceramics. The remainder of 1,579 tons was soapstone and came from Butte, El Dorado, and Los Angeles counties. The 1939 figures for soapstone and talc are the largest of any year recorded in California.

The 'soapstone' grades were used mainly for roofing granules and as a filler in roofing paper and part also in magnesite cement.

It is reported that California talc has replaced to some extent imported talc in the toilet trade on the basis of quality. The largest production of talc in the United States comes from Vermont and New York and of massive soapstone from Virginia.

During 1939 imports of talc, steatite, etc., totaled 26,267 tons valued at \$452,619, as compared with 22,127 tons worth \$391,198 during 1938, according to the United States Bureau of Foreign and Domestic Commerce.

The Tariff Act of 1930 places a duty on talc, steatite or soapstone and French chalk, crude or unground, of one-fourth of one cent per pound.

Composition and Varieties.

Talc is hydrous magnesium silicate with the chemical formula $H_2Mg_3(SiO_3)_4$. It is also called soapstone and steatite. The term 'talc' properly includes all forms of the pure mineral, whereas 'steatite' denotes particularly the massive, compact variety, and 'soapstone'

the impure, massive forms containing as low as 50% of talc. When pure, talc is soft, having a hardness of 1, but impurities increase the hardness up to 3 or 4. The color varies from pure white and silvery white through gray, green, apple green, to dark green, also yellow, brown, and reddish when impure. It is commonly compact or massive, or in fine granular aggregates, and often in foliated plates or in fibrous aggregates.

Uses.

Although the uses of talc and soapstone are many and varied, some of them are not in general well known nor fully developed; and although few of their uses can justly be considered essential in the sense that no substitute can be used, there are several which are of great importance. The widest use of talc is in the powdered form, and the value depends upon color (whiteness), uniformity, fineness of grain, freedom from grit, 'slip,' and sometimes freedom from lime. The white varieties, free from grit and iron, low in lime, ground to 200-mesh and finer, are largely used as a filler for paper, rubber and paint, and the very highest grade as toilet powder. Ground talc is also used in dressing and coating cloth, in making soap, rope, twine, pipe-covering compounds, heavy lubricants, and polishes, and as a filler in concrete to make it waterproof. Ground talc and soapstone are used in ceramic body for tile and china; for foundry facings, either alone or mixed with graphite and a coarser grade is used in the manufacture of asphalt-coated roofing felts and papers, both as a filler and as a surfacing. Massive close-grained talc, free from iron and grit, is cut into blanks and baked, forming the material used for gas tips and electrical insulation, commonly known as 'lava.' Its hardness, its resistance to heat, acids and alkalies, and its great dielectric strength make it very useful for electric insulation, and no satisfactory substitute for it has been found.

Massive varieties of talc, pyrophyllite, and high grades of soapstone are cut into slate pencils and steel-workers' crayons. 'French chalk' or 'tailor's chalk' is a soft, massive talc. In China, Japan and India, massive talc (steatite) is carved into images and other forms, and is often sold as imitation jade. Soapstone is cut into slabs of 1 and 2 inches in thickness and sold as griddles, footwarmers, and fireless-cooker stones, or fabricated into laundry sinks and tubs, laboratory table tops, hoods, tanks and sinks, electric switchboards, and for other uses in which the properties of resistance to heat, acids and alkalies, and electricity are essential.

Talc Production of California, by Years.

Production was intermittent in the State up to 1912; but there has been a material growth since 1916, as shown in the following table:

Year	Tons	Value	Year	Tons	Value
1893.....	400	\$17,750	1917.....	5,267	\$45,279

STRONTIUM

Bibliography: State Mineralogist Report XXVI, XXVII, XXXV, Bulletins 67, 91. U. S. G. S. Bull. 540; 660-I.

There was a small shipment of strontianite in California during 1939 from the deposit near Barstow, San Bernardino County and this was used in a new steel alloy. The annual figures are concealed under the 'Unapportioned' item so as not to reveal the output of an individual. The last previous production was in 1918, though in that year both celestite (SrSO_4), and the carbonate, strontianite (SrCO_3) were shipped. The first recorded commercial output of strontium minerals in California was in 1916. The occurrence of the carbonate is particularly interesting and valuable, as it appears to be the only considerable deposit of commercial importance so far opened up in the United States. Shipments reported as averaging 80% SrCO_3 have been made. The deposit is associated with deposits of barite near Barstow, San Bernardino County. The carbonate has also been found in massive form near Shoshone, Inyo County. In addition to Imperial County, celestite is found near Calico and Ludlow, and in the Avawatz Mountains in San Bernardino County, but as yet undeveloped.

The principal use for strontium in the United States is in the form of the nitrate in the manufacture of red flares, or Costen and Bengal lights and fireworks.

Production of strontium minerals in California, by years, has been as follows:

Year	Tons	Value	Year	Tons	Value
1916.....	57	\$2,850	1919.....	*	*
1917.....	3,050	37,000	1939.....	*	*
1918.....	2,900	33,000	Totals.....	6,007	\$72,850

* Annual details concealed under 'Unapportioned.'

SULPHUR

Bibliography: State Mineralogist Reports IV, XIII, XIV, XXV, XXXIV, XXXV. Bulletins 38, 67, 91.

During 1939 sulphur was produced in California from three properties in Inyo County to the total of 4,811 short tons valued at \$73,741, this being an increase in amount and value as compared with 1938 output. Also development work is being done at the Leviathan Mine in Alpine County. This mineral has been found to some extent in Alpine, Colusa, Imperial, Inyo, Kern, Lake, Sonoma, Tehama, and Ventura counties.

Inyo County

Total Production of Sulphur in California.

Sulphur was produced at the famous Sulphur Bank mine in Lake County, during the years 1865-1868 (inc.); following which the property became more valuable for its quicksilver. The Elgin quicksilver mine, near Wilbur Springs, Colusa County, is a similar occurrence.

Production of sulphur in California to date:

ZIRCON

Bibliography: State Mineralogist Report XXXIV.

During 1939 there were no shipments of zircon sands in California. In 1937 for the first time, zircon was reported in commercial quantities in this State. The Kaufeld gold dredge near Lincoln placer recovered considerable zircon from their black sands some of which was shipped for experimental purposes in the manufacture of refractories and for an abrasive in sand blast.

The chief source of zirconium is the mineral zircon, a zirconium silicate, ZrSiO_4 . Zircon is used, as a gem, being next to the diamond in brilliancy; as a refractory, molds for steel, insulation in electric heating devices, as a coating on other refractories, coating of welding rods, and in the manufacture of other zirconium compounds.

The metal zirconium is used in radio tubes as an alloy in steel, with copper, etc.

CHAPTER SIX

SALINES

Bibliography: State Mineralogist Reports III, XIV, XV, XVII-XXIX (inc.), XXXIII-XXXV (inc.). Bulletin 24. Spurr and Wormser, "Marketing of Minerals." "Non-Metallic Minerals," by R. B. Ladoo. "Industrial Minerals and Rocks," A. I. M. E., 1937. See also under each substance.

Under this heading are included borax, common salt, soda, potash, and other alkaline salts. The first two have been produced in a number of localities in California, more or less regularly since the early sixties. Except for a single year's absence, soda has had a continuous production since 1894. Potash, magnesium chloride and sulphate, and calcium chloride have been added to the commercial list in recent years, joined in 1926 by bromide, and in 1931 by iodine and in 1938 by the alum minerals. The nitrates are still prospective.

Our main resources of salines are the lake beds of the desert regions of Imperial, Inyo, Kern, Los Angeles, San Bernardino, and San Luis Obispo counties, and the waters of the Pacific Ocean.

The total value of this group showed a decrease from \$14,279,949 in 1938 to \$13,178,499 in 1939.

The following table gives details for each year:

Substance	1938		1939		Increase+ Decrease— Value
	Amount	Value	Amount	Value	
Borates.....	276,144 tons	\$5,014,237	244,819 tons	\$5,110,807	\$96,570+
Magnesium salts.....	24,167 tons	469,636	3,895 tons	382,457	87,179—
Salt.....	395,746 tons	1,099,737	417,956 tons	1,174,386	74,649+

^a Includes bromine, calcium chloride, iodine and potash.

^b Includes alunogen, bromine, calcium chloride, iodine, and potash.

ALUM MINERALS

Bibliography: State Mineralogist Report XXXV.

There are several minerals found in California that are considered natural alums. They are hydrous aluminum sulphates combined with sulphates of iron, potassium, sodium or magnesium. The most important are: Alunite, $K_2Al_6(OH)_{12}(SO_4)_4$, a basic hydrous aluminum and potassium sulphate, and Alunogen, $Al_2(SO_4)_3 \cdot 16H_2O$, an hydrous aluminum sulphate.

In 1938 a small production and some development work was done on an alunogen deposit near Corona, Riverside County. During 1939 this property changed hands and not till February of 1940 did it get into production and the material is being sold as a soil conditioner.

The 1938 output was the first recorded commercial production reported in California. The annual details are combined under 'Unapportioned' item to conceal the output of the single operator. An alunite deposit near Glen Ellen, Sonoma County, was opened up several years ago and some development work has been done in hopes of commercializing this mineral.

BORATES

Bibliography: State Mineralogist Reports III, X, XII-XV (inc.), XVII-XXIX (inc.), XXV-XXVII (inc.), XXXIII-XXXIV. Bulletins 24, 67, 91.

During 1939 there was produced in California a total of 238,390 tons of borate materials compared with 240,899 tons for the year 1938. The material shipped during the year included the new sodium borates, kernite (rasorite), kramerite from Kern County; also crystallized borax prepared by evaporation of brines at Searles Lake in San Bernardino County and Owens Lake in Inyo County.

As the crude ore is not sold as such, but is almost entirely refined into borax of commerce before shipping, and because of the fact that the material varied widely in boric acid content, we have recalculated the tonnage to a basis of 40 per cent A.B.A. This is approximately the average A.B.A. content of colemanite material after calcining, and also of the crystallized borax obtained from evaporation of the lake brines.

Recalculated as above, the 1939 production totaled 244,819 tons valued at \$5,110,807. This was a decrease in quantity and a slight increase in value from the 1938 output, which was 276,144 tons worth \$5,014,237.

The total amount of borates exported from the United States¹ during the year 1939 was 91,139 tons valued at \$3,230,304, as compared with 77,519 tons valued at \$2,642,446 in 1938.

Total Production of Borate Materials in California.

Borax was first discovered in California in the waters of Tuscan Springs in Tehama County, January 8, 1856. Borax Lake in Lake County was discovered in September of the same year by Dr. John A. Veach. This deposit was worked in 1864-1868, inclusive, and during that time produced 1,181,365 pounds of refined borax. The bulk of it was exported by sea to New York. This was the first commercial output of this salt in the United States, and California is still today the leading American producer of borax, having been for many years the sole producer. California is also the premier world source, today.

Production from the dry lake 'playa' deposits of Inyo and San Bernardino counties began in 1873; but it was not until 1887 that the borax industry was revolutionized by the discovery of the colemanite beds at Calico, in San Bernardino County and later similar beds in Inyo and Los Angeles counties. The colemanite deposits of Ventura County were not worked extensively, owing to lack of transportation facilities. Some production of colemanite has been made from deposits opened up in Clarke County, Nevada. Colemanite was in turn, displaced by the discovery in 1926 of kernite (rasorite) a sodium borate

¹ Monthly Summary of Foreign Commerce of the United States, Department of Commerce, Dec., 1939, Part 1.

and probertite (kramerite) a hydrous sodium, and calcium borate, near Kramer in Kern County. The brines of Searles Lake are likewise an important source.

Photo by W. B. Tucker

Pacific Coast Borax Co. mine at Kramer, Kern County

The total production of borate materials in California is shown in the following table:

Total Production of Borate Materials in California

¹ Refined borax.

² Recalculated to 40% 'anhydrous boric acid' equivalent beginning with 1922.

BROMINE

The first commercial production of bromine and bromine compounds was begun during 1926 by the California Chemical Corporation in its plant at Chula Vista, San Diego County, from salt-works bittern waters. This same plant has been recovering magnesium chloride for a number of years. Bromine is also now being made at a similar bittern-water plant at Newark, Alameda County. The 1939 output showed a decreased value and amount as compared with 1938 production; annual details of which are concealed under the 'Unapportioned' item so as not to reveal the production of the single company which operated both plants.

The total commercial production of bromine in California is as follows:

Year	Tons	Value	Year	Tons	Value
1926)			1932)		
1927)*-----	158	\$120,480	1933)*-----	559	\$146,547

CALCIUM CHLORIDE

Bibliography: U. S. Geol. Surv., Min. Res. 1919, Pt. II. Engineering and Contracting, Roads and Streets, monthly issue, Feb. 6, 1924. 'How to Maintain Roads,' manual of instruction of Dow Chemical Company.

Calcium chloride is hygroscopic, that is, it has an affinity for water. This property is taken advantage of by utilizing this salt as a drying agent. During 1939 the production of calcium chloride in California came from one plant in San Bernardino County. The annual details are combined under the 'Unapportioned' item to conceal the output of the operator. The 1939 output showed a decrease in both amount and value as compared with that of 1938.

Total Calcium Chloride Production in California.

Commercial production of calcium chloride in California was first reported to the State Mining Bureau in 1921, from two plants in San Bernardino County, being obtained as a by-product in the refining of salt from deposits in certain of the desert dry lakes. Total production in California is shown in the following tabulation:

Year	Tons	Value	Year	Tons	Value
1921	683	\$22,980	1930		
1922			1931	9,688	\$103,237
1923	1,204	26,580	1932		
1924			1933	3,103	15,500
1925	10,988	328,876	1934

IODINE

Bibliography: State Mineralogist Report XXXIV. U. S. Bureau of Mines I. C. 6387.

In 1939 the output of iodine in California came from two plants in Los Angeles County and showed an increase in both quantity and value over 1938. The annual details for 1939 are concealed under the "Unapportioned" item to conceal the output of either operator. The combined 1937-1938 production came from three plants in Los Angeles County, and amounted to 624,318 pounds, valued at \$508,119.

Total Iodine Production in California.

Iodine was first produced in California during 1917 to 1921 as a by-product of potash which was reduced from kelp in an experimental station of U. S. Department of Agriculture at Summerland, but after the armistice the demand for these minerals decreased so that the plant in Santa Barbara County closed. In 1929 the General Salt Company erected a plant which reduces iodine from the waste waters of certain deep oil wells in the Long Beach field. During 1933 two more plants started operation, making a total of three producing plants in the State.

Year	Pounds	Value
1929		
1931		
1933	696,297	\$1,374,311
1934		
1935	355,279	423,016
1936	487,401	379,702
1937		
1938	624,318	508,119

MAGNESIUM SALTS

Bibliography: State Mineralogist Reports XX, XXI, XXV-XXVI (inc.), XXXIV. Bulletin 91. 'Dictionary of Applied Chemistry,' by Thorpe. U. S. Geol. Surv., Min. Res. of P. S.

During 1939 there was an output of magnesium salts in California coming from one plant in San Diego County, and two in San Mateo

County. This amounted to 3,895 short tons valued at \$382,457, and consisted of the chloride, carbonate, hydroxide, and oxide. The 1938 output amounted to 24,176 tons worth \$469,636, which was also the chloride, carbonate, hydroxide, and oxide. The chloride was nearly all sold for use in magnesite stucco and cement mixtures (Sorel cement), also some for road liquor. The carbonate, or bulky white powder, was used as a heat-insulating material, as a substitute for magnesite, as a filler for rubber, paper, paint, etc., and in medicines, in tooth paste, in face powder and as a polish for metal and glass. The sulphate market in past years was utilized for medicinal and bath purposes. The material coming from San Diego County was residual bitterns from the salt plants and was in part marketed in the liquid form carrying from 35% to 67% $MgCl_2$ and in part as dry crystals, while that from Alameda and San Mateo counties was magnesium carbonate, magnesium hydroxide, and magnesium oxide, obtained by precipitation from sea water.

The average value reported for the chloride produced in California in 1939 was approximately \$29.80 per ton, f.o.b. plant, and in 1938 approximately \$28.30 per ton, f.o.b. plant.

Total Production of Magnesium Salts in California.

Commercial production of magnesium chloride in California was begun in 1916 by some of the salt companies, from the residual bitterns obtained during the evaporation of sea water for its sodium chloride. In addition, some magnesium sulphate, or 'epsom salts' has also been made, but in smaller amount, and magnesium carbonate by a patented process, direct from sea water.

The total production of magnesium salts in California, since the beginning of the industry here, is shown in the following tabulation:

Year	Tons	Value	Year	Tons	Value
1916.....	851	\$6,407	1929)*.....	4,914	\$333,906

NITRATES

Bibliography: State Mineralogist Reports XV, XXV, XXVI, XXVII, XXXIV. Bulletins 24, 67, 91. U. S. G. S., Press Bulletin No. 373, July, 1918. Smithsonian Inst., Publ. No. 2421, 1916.

Nitrates of sodium, potassium and calcium have been found in various places in the desert regions of the State, but no deposit of commercial value has been developed as yet. It is hoped that a closer search may some day be rewarded by workable discoveries. At present

the principal commercial source of nitrates is the Chilean saltpeter (sodium nitrate) deposits in South America.

The fixation of atmospheric nitrogen electrically has been accomplished successfully in Germany and Scandinavia. The possibilities of cheap hydroelectric power in California make the subject one of interest to us, as we have also the natural raw materials and chemicals to go with the explosives. Sodium and potassium cyanides can be made by fixation of atmospheric nitrogen electrically.

POTASH

Bibliography: State Mineralogist Reports XV, XVIII, XX, XXII, XXV-XXVII (inc.), XXXIV. Bulletins 24, 67, 91. U. S. G. S., Min. Res. 1913, 1914, 1915. Senate Doc. No. 190, 62 Congress, 2d Session. Mining & Sci. Press, Vol. 112, p. 155; Vol. 114, p. 789. Eng. & Min. Jour.-Press, Vol. 117, p. 557, Apr. 5, 1924.

The 1939 production of potash in California came from a single operator in San Bernardino County, the details of which are concealed under the 'Unapportioned' item. This was principally chloride and the product averaged 60% equivalent K_2O content. The material was sold mainly for fertilizer manufacture.

Photo by Walter W. Bradley

Plant of American Potash and Chemical Co., at Trona on Searles Lake, San Bernardino County

Imports of crude potash minerals and salts in the United States during 1939 according to the U. S. Bureau of Foreign and Domestic Commerce amounted to 210,818 long tons, valued at \$5,752,225, compared with 379,486 long tons worth \$9,856,201 in 1938. These materials consisted mainly of 'manure salts,' crude chloride (muriate) and sulphate, and kainite, all of which are admitted duty free.

Quotations have recently ranged from \$36.25 per ton c.i.f. Atlantic and Gulf ports for high grade sulphate (90%-95%), and \$16.50 for manure salts (30%).

Total Production of Potash in California.

Potash production began commercially in California in 1914, with a small yield from kelp. Practically all of the output now comes from

deposits of potash-bearing residues and brines in the old lake beds of the desert regions, particularly Searles Lake, San Bernardino County. A small amount has been made from salt-works bitters, and for a time there was some from Portland cement dust. Some also has been obtained from molasses distillery-slops char.

The annual amounts and values of these potash materials, since their beginning in California in 1914, have been as follows:

Year	Tons	Value	Year	Tons	Value
1914-----	10	\$460	1927-----	67,340	\$1,952,852
1915-----	1,076	19,391	1928)*-----	178,680	5,522,350
1916-----	17,808	663,605	1929)*-----	172,263	5,500,536
1917-----	129,022	4,202,889	1930)*-----	153,147	3,932,721

SALT

Bibliography: State Mineralogist Reports II, XII-XV (inc.), XVII-XXIII (inc.), XXV-XXVII (inc.), XXXIV-XXXV. Bulletins 24, 67, 91. U. S. Geol. Survey, Bull. 669. U. S. Bur. of Mines, Bull. 146.

Most of the salt production in California is obtained by evaporation of water of the Pacific Ocean, plants being located on the shores of San Francisco, Monterey, and San Diego bays, and at Long Beach. Additional amounts are derived from lakes and lake beds in the desert regions (in part, rock salt), mainly in Imperial, Kern, and San Bernardino counties, and evaporation of alkaline lake water in Modoc County. A small amount of valuable medicinal salts has been obtained by evaporation of the water of Lake Mono, Mono County, and from a mineral spring in Butte County.

During 1939 there was an output in California of 417,956 tons of salt worth \$1,174,386, compared with 395,746 tons worth \$1,099,737 in 1938. There were sixteen operating plants in 1939; three in Alameda County; two each in Imperial and San Bernardino counties; and one each in Butte, Kern, Los Angeles, Mono, Modoc, Monterey, Orange, San Diego, and San Mateo counties.

The average value reported for salt produced in California during 1939 was \$2.75 per ton f.o.b. plant, compared with \$2.78 in 1938, \$2.82 in 1937, \$3.08 in 1936, \$3.36 in 1935, and \$3.68 in 1934.

Production of Salt in California, by Years.

Although salt has been made in California since the early '60's, there are no definite or authenticated records for the earlier years before the beginning of the statistical tabulations by the State Mining Bureau.

Amount and value of annual production of salt in California from 1887 is shown in the following tabulation:

Year	Tons	Value	Year	Tons	Value
1887.....	28,000	\$112,000	1914.....	223,806	\$583,553
1888.....	30,800	92,400	1915.....	169,028	368,737
1889.....	21,000	63,000	1916.....	186,148	455,695
1890.....	8,729	57,085	1917.....	227,825	584,373
1891.....	20,094	90,303	1918.....	212,076	806,328
1892.....	23,570	104,788	1919.....	233,994	896,963
1893.....	50,500	213,000	1920.....	230,638	972,648
1894.....	49,131	140,087	1921.....	197,989	832,702

SODA

Bibliography: State Mineralogist Reports XII, XIII, XV, XVII, XVIII, XX, XXII, XXIII, XXV-XXIX (inc.), XXXIV. Bulletins 24, 67, 91. U. S. Geol. Surv., Bull. 717.

The production of sodium salts in California in 1939 included soda ash, and trona, from plants at Owens Lake, Inyo County; and soda ash, salt cake, and trona (sequi-carbonate, a double salt of Na_2CO_3 and NaHCO_3) from Searles Lake, San Bernardino County. There were no shipments of salt cake (sulphate) from Carrizo Plains, San Luis Obispo County.

The output for 1939 amounted to 200,049 tons valued at \$2,055,608, as compared with 178,105 tons valued at \$2,023,610 in 1938.

The soda ash was used mainly in the manufacture of soap, glass, paper, oil refining, sugar refining, and chemicals; and the trona for metallurgical purposes.

Soda Production of California, by Years.

The total output, showing amount and value of these materials in California since the inception of the statistical records of the State Mining Bureau, is given in the table which follows:

Year	Tons	Value	Year	Tons	Value
1894.....	1,530	\$20,000	1918.....	20,447	\$855,423
1895.....	1,900	47,500	1919.....	21,294	721,958
1896.....	3,000	65,000	1920.....	32,407	1,164,898
1897.....	5,000	110,000	1921.....	14,828	438,996
1898.....	7,000	154,000	1922.....	20,084	573,661
1899.....	10,000	250,000	1923.....	34,885	764,284
1900.....	1,000	50,000	1924.....	32,536	711,796

CHAPTER SEVEN

BY COUNTIES

Introductory.

The State of California includes a total area of 158,297 square miles, of which 155,652 square miles are of land. The maximum width is 235 miles, the minimum 148 miles, and the length from the north-west corner to the southeast corner is 775 miles. The State is divided into fifty-eight counties. The 1930 census figures show a total population for California of 5,672,009. Minerals of commercial value exist in every county, and during 1936 some active production was reported to the State Division of Mines from all of the fifty-eight.

Rank of Counties in Mineral Yield, 1938.

Of the ten leading counties in point of total value of mineral output for 1939, the first six, viz., Los Angeles, Kern, Fresno, Ventura, Orange, Kings, and Santa Barbara ninth, owe their position to petroleum and natural gas. Los Angeles County, due to crude oil, led all other counties in 1939 and is credited with 32% of the State's total mineral value, holding this position since 1923 when it passed Kern, which previously led the State for many years. San Bernardino (seventh) owes its position to cement, borates, and potash. Nevada (eighth) owes its position to gold; and Sacramento (tenth) to gold.

There were thirty counties having a mineral production valued in excess of a million dollars in 1939, in seven of which petroleum and natural gas each were an important item; in seventeen, gold; in six, cement; in two, borates and miscellaneous stone; and in one each, potash and soda, diatomite.

In point of variety and diversity San Bernardino County led all others in 1939 with twenty-seven different mineral substances on its commercial list, followed by Los Angeles and Inyo counties each with twenty-two different substances; Kern County with twenty; Fresno County with sixteen; Orange, Riverside, San Diego, and Tuolumne counties each with fourteen; El Dorado, Imperial, each with thirteen; Monterey County with twelve; Butte, Placer, and San Luis Obispo counties each with eleven; and Calaveras, Contra Costa, Napa, and Sacramento counties each with ten.

ALAMEDA

Land area: 732 square miles.

Population: 475,153 (1930 census).

Location: East side of San Francisco Bay.

County seat: Oakland.

References: State Mineralogist Report XVII : XVIII : XX : XXVI (Oct., 1929) ; XXXV.

Alameda, while in no sense one of the 'mining counties' came seventeenth on the list of counties as to value, with a mineral production for 1939 worth \$2,778,587, and had seven different substances. This was an increase over the 1938 output which was valued at \$2,531,600.

Commercial production for 1939 was as follows:

Substance	Amount	Value
Clay (pottery)	10,434 tons	\$17,073
Stone, miscellaneous		1,325,914
Unapportioned *		1,435,600
Total value		\$2,778,587

* Includes brick and hollow building tile, bromine, lime, and salt.

ALPINE

Land area: 776 square miles.

Population: 236 (1930 census).

Location: On eastern border of State, south of Lake Tahoe.

County seat: Markleeville.

References: State Mineralogist Report XV : XVII : XVIII : XXVII (Oct., 1931) : XXV.

Alpine County ranked fifty-eighth in value of output for 1939, which was \$7,328, compared with \$11,123 in 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	-----	\$1,715
Silver.....	4,489 fine ozs.	3,047
Unapportioned *.....	-----	2,566
Total value.....	-----	\$7,328

* Includes copper, lead, and miscellaneous stone.

AMADOR

Land area: 601 square miles.

Population: 8494 (1930 census).

Location: East-central part of State—Mother Lode District.

County seat: Jackson.

References: State Mineralogist Report XV : XVII : XVIII : XIX : XX : XXII : (April, 1927) : XXX, XXXV.

Amador County ranked twelfth as to value of mineral output for 1939, with nine different substances worth \$4,314,573 compared with \$3,880,440 in 1938.

Amador at one time led the State in gold production, though exceeded in 1920-1923 and in 1926-1927 by Yuba and Nevada counties; but in 1925 and 1928 by Yuba only, in 1929-1930 by Nevada only, and in 1931-1936 and 1938 by Nevada and Sacramento.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay, pottery.....	37,780 tons	\$64,147
Copper.....	3,933 lbs.	409
Gold.....	-----	4,167,030
Silver.....	22,703 fine ozs.	15,411
Stone, miscellaneous.....	-----	3,300
Unapportioned *.....	-----	64,276
Total value.....	-----	\$4,314,573

* Includes brick, lead, platinum, volcanic ash.

BUTTE

Land area: 1722 square miles.

Population: 34,010 (1930 census).

Location: North-central portion of State.

County seat: Oroville.

References: State Mineralogist Report XV : XVII : XVIII : XXIV : XXVI (Oct., 1930) : XXXI (Jan., 1936).

Butte County ranked twenty-first in regard to value of mineral output in 1939 and eighth in respect to gold, with eleven different

substances, having a total value of \$2,217,721 compared with \$2,177,265 in 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper-----	5,838 lbs.	\$607
Gold-----	-----	2,079,385
Lead-----	11,799 lbs.	555
Silver-----	17,106 fine ozs.	11,611
Stone, miscellaneous-----	-----	123,517
Unapportioned *-----	-----	2,046
Total value-----	-----	\$2,217,721

* Includes natural gas, platinum, salt (medical), soapstone, mineral water.

CALAVERAS

Land area: 1027 square miles.

Population: 6009 (1930 census).

Location: East-central portion of State—Mother Lode District.

County seat: San Andreas.

References: State Mineralogist Report XIV : XVII : XVIII : XIX : XX : XXI : XXXII (July, 1936) : XXXV.

Calaveras County ranked eleventh in California in regard to value of mineral output in 1939, fourth in respect to gold, with a total of \$5,392,940, as compared with \$4,357,938 in 1938.

Commercial production for 1939 consisting of ten different substances, was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----	-----	\$3,709,895
Silver-----	23,664 fine ozs.	16,063
Stone, miscellaneous-----	-----	9,955
Unapportioned *-----	-----	1,657,027
Total value-----	-----	\$5,392,940

* Includes cement, clay (pottery), copper, lead, mineral water, platinum, slate.

COLUSA

Land area: 1140 square miles.

Population: 10,257 (1930 census).

Location: Sacramento Valley.

County seat: Colusa.

References: State Mineralogist Report XIV : XVII : XVIII : XXV : (April, 1929) : XXXV.

Colusa County ranked fifty-sixth in regard to the value of mineral output in 1939, with three different mineral substances, worth a total of \$20,149, as compared with \$2,884 in 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Value</i>
Gold-----	\$35
Stone, miscellaneous-----	19,714
Other minerals-----	400
Total value-----	\$20,149

CONTRA COSTA

Land area: 714 square miles.

Population: 78,554 (1930 census).

Location: East side of San Francisco Bay.

County seat: Martinez.

References: State Mineralogist Report XVII : XVIII : XXIII
(Jan., 1927) : XXXV.

Contra Costa County stands twenty-second on the list in respect to value of mineral output for 1939, with ten different substances worth \$2,206,131, as compared with \$2,116,285 in 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Value</i>
Brick and hollow building tile.....	\$695,508
Stone, miscellaneous	320,320
Unapportioned *	1,190,303
Total value	\$2,206,131

* Includes cement, clay (pottery), coal, gems, mineral water, quicksilver, silica (glass sand).

DEL NORTE

Land area: 1024 square miles.

Population: 4734 (1930 census).

Location: Extreme northwest corner of State.

County seat: Crescent City.

References: State Mineralogist Report XIV : XVII : XXI (July, 1925) : XXIX (Jan.-April, 1933) : XXXIV : XXXV.

Del Norte County was in fifty-seventh place as to mineral production for 1939 with five different substances worth \$13,101 as compared with \$15,296 in 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	--	\$4,410
Silver.....	22 fine ozs.	15
Stone, miscellaneous.....	--	7,250
Unapportioned *	--	1,426
Total value.....		\$13,101

* Includes chromite and platinum.

EL DORADO

Land area: 1753 square miles.

Population: 8303 (1930 census).

Location: East-central portion of the State, northernmost of the Mother Lode counties.

County seat: Placerville.

References: State Mineralogist Report XV : XVII : XVIII : XIX : XX : XXII (Oct., 1926) : XXXI : XXXIV (July, 1938) : XXXV.

El Dorado, which contains the location where gold in California was first heralded into the world, comes thirteenth on the list of counties ranked according to value for 1939, with thirteen different mineral substances worth \$3,277,679. In addition to the segregated figures

here given, a large tonnage of limestone was formerly shipped for use in cement manufacture, the value being included in the State's total for cement. The 1938 output was valued at \$2,207,099.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper.....	10,910 lbs.	\$1,135
Gold.....		2,520,105
Lead.....	4,766 lbs.	224
Limestone.....	146,625 tons	320,212
Silver.....	12,710 fine ozs.	8,627
Stone, miscellaneous.....		16,422
Unapportioned *.....		410,954
Total value.....		\$3,277,679

* Includes chromite, lime, platinum, slate, soapstone, mineral water.

FRESNO

Land area: 5950 square miles.

Population: 144,369 (1930 census).

Location: South-central portion of State.

County seat: Fresno.

References: State Mineralogist Report XIV : XVII : XVIII : XXV (July, 1929) : XXXV.

Fresno County, third in importance as a mineral producer among the counties of California, reports an output for 1939 of sixteen different mineral substances, with a total value of \$21,275,300, as compared with the 1938 value of \$30,159,518.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....		\$16,100
Natural gas.....	54,485,085 M. cu. ft.	2,799,981
Petroleum.....	15,411,056 bbls.	18,077,169
Silver.....	85 fine ozs.	58
Stone, miscellaneous.....		293,022
Unapportioned *.....		88,970
Total value.....		\$21,275,300

* Includes brick, clay (pottery), feldspar, gems, mineral water, gypsum, granite, limestone, quicksilver, tungsten.

GLENN

Land area: 1259 square miles.

Population: 10,935 (1930 census).

Location: West side of Sacramento Valley.

County seat: Willows.

References: State Mineralogist Report XIV : XVII : XVIII : XXXV.

Glenn County stands fifty-first as a mineral producing county of the State for 1939 and owes its position mainly to the presence of large deposits of sand and gravel, much of which is used as railroad ballast.

Commercial production for 1939 totaled \$54,591, which is a decrease from \$60,138, the 1938 total.

HUMBOLDT

Land area: 3634 square miles.

Population: 43,189 (1930 census).

Location: Northwestern portion of State, bordering on Pacific Ocean.

County seat: Eureka.

References: State Mineralogist Report XIV : XVII : XVIII : XXI (July, 1925) : XXXV.

Humboldt County ranked forty-sixth in the value of its mineral output among the counties of the State for 1939, with seven different mineral substances valued at \$133,150, compared with the 1938 output worth \$97,181.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	---	\$45,955
Silver.....	166 fine ozs.	113
Stone, miscellaneous.....	---	81,556
Unapportioned *.....	---	5,526
Total value.....	---	\$133,150

* Includes brick, clay (pottery), natural gas, platinum.

IMPERIAL

Land area: 4089 square miles.

Population: 60,894 (1930 census).

Location: Extreme southeast corner of the State.

County seat: El Centro.

References: State Mineralogist Report XIV : XVII : XVIII : XIX : XX : XXII (April, 1926) : XXXIV : XXXV.

Imperial County ranked thirty-second in total value of mineral output for 1939, with thirteen different mineral substances, worth \$822,271, compared with \$604,227 for 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper.....	67,328 lbs.	\$7,002
Gold.....	---	687,995
Silver.....	8,951 fine ozs.	6,076
Stone, miscellaneous.....	---	45,750
Unapportioned *.....	---	75,440
Total value.....	---	\$822,271

* Includes carbon dioxide, lead, gems (Iceland spar), gypsum, kyanite, limestone, manganese ore, salt.

INYO

Land area: 10,019 square miles.

Population: 6557 (1930 census).

Location: Lies on eastern border of State, north of San Bernardino County.

County seat: Independence.

References: State Mineralogist Report XV : XVII : XVIII : XX : XXII (Oct., 1926) : XXVII : XXX : XXXIII : XXXIV (Oct., 1938) : XXXV.

Inyo County's mineral output for 1939 reached a total value of \$1,614,597 having twenty-two different mineral substances and stand-

ing twenty-seventh among the counties of the State as to value of production. The 1938 yield was worth \$1,583,893.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper.....	74,543 lbs.	\$7,752
Gold.....		443,275
Lead.....	174,407 lbs.	8,197
Pumice.....	5,886 tons	56,170
Silver.....	30,104 fine ozs.	20,434
Stone, miscellaneous.....		4,230
Sulphur.....	4,811 tons	73,741
Zinc.....	7,285 lbs.	379
Unapportioned *.....		1,000,419
Total value.....		\$1,614,597

* Includes antimony, bentonite, borates, dolomite, garnets, iron ore, lime, limestone, marble, molybdenum, quicksilver, soda, talc, tungsten ore.

KERN

Land area: 8003 square miles.

Population: 82,219, (1930 census).

Location: South-central portion of State.

County seat: Bakersfield.

References: State Mineralogist Report XIV : XVII : XVIII : XIX : XX : XXV (Jan., 1929) : XXIX (July-Oct., 1933) : XXX : XXXIV : XXXV.

Kern County, because of its immensely productive oil fields, for many years stood preeminent among all counties of California in the value of its mineral output. It was surpassed by Los Angeles and Orange counties in 1923, but by Los Angeles only in 1924-1939, for which petroleum is responsible; it also rates fifth as a gold producing county. The 1939 production consisted of twenty different mineral substances valued at \$62,105,687 compared with the 1938 output worth \$71,528,574.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery and oil well drilling mud).....	23,213 tons	\$32,373
Gold.....		3,151,015
Lead.....	28,542 lbs.	1,341
Natural gas.....	73,950,832 M. cu. ft.	5,191,065
Petroleum.....	58,893,865 bbls.	48,664,001
Silver.....	1,130,888 fine ozs.	767,633
Stone, miscellaneous.....		158,220
Unapportioned *.....		4,140,039
Total value.....		\$62,105,687

* Includes antimony, bentonite, borates, brick, calcium silicate, cement, copper, gypsum, quicksilver, salt, volcanic ash, tungsten.

KINGS

Land area: 1559 square miles.

Population: 25,277 (1930 census).

Location: South-central portion of the State.

County seat: Hanford.

References: State Mineralogist Report XIV : XVII : XVIII : XXVI (Oct., 1930) : XXXV.

Kings County, previous to the discovery of Kettleman Hills oil fields in 1928, had little or no mineral output, but in 1929 it ranked

ninth in total value of annual mineral production, seventh in 1930 and 1938, third in 1931, eighth in 1936-1937, and sixth in 1939.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Natural gas.....	46,054,600 M. cu. ft.	\$2,526,102
Petroleum.....	9,871,899 bbls.	14,115,828
Quicksilver.....	25 flasks	2,583
Miscellaneous stone.....	-----	2,930
Total value.....	-----	\$16,647,443

LAKE

Land area: 1278 square miles.

Population: 7166 (1930 census).

Location: About fifty miles north of San Francisco Bay and the same distance inland from the Pacific Ocean.

County seat: Lakeport.

References: State Mineralogist Report XIV : XVII : XVIII : XX : XXV (July, 1929) : XXXIV : XXXV.

Lake County was in forty-first place as to the value of mineral output for 1939, with five different mineral substances, worth \$451,575 compared with \$281,098 in 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Quicksilver.....	4,155 flasks	\$416,150
Mineral water.....	23,850 gals.	7,100
Stone, miscellaneous.....	22	28,290
Other minerals.....	----	35
Total value.....	-----	\$451,575

LASSEN

Land area: 4531 square miles.

Population: 12,587 (1930 census).

Location: Northeast portion of State.

County seat: Susanville.

References: State Mineralogist Report XV : XVII : XVIII : XIX : XXV (Jan., 1929) : XXX : XXXII (Oct., 1936).

Lassen County was in fifty-fourth place as a mineral producer for 1939, with an output of \$46,277, compared with \$59,546 which was the value for the previous year.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	---	\$3,325
Silver.....	355 fine ozs.	241
Stone, miscellaneous.....	---	42,711
Total value.....	-----	\$46,277

LOS ANGELES

Land area: 4067 square miles.

Population: 2,201,526 (1930 census).

Location: One of the southwestern coast counties.

County seat: Los Angeles.

References: State Mineralogist Report XV : XVII : XVIII : XIX : XX : XXIII (July, 1927) : XXX : XXXIII (July, 1937) : XXXIV : XXXV.

The mineral production for Los Angeles County for the year 1939 amounted in value to \$113,577,646, as compared with the 1938 total worth \$125,027,054. This accounted for 32% of the entire State's total for 1939 and ranked Los Angeles first in the State as a mineral producer.

Commercial production for 1939, consisting of twenty-two substances was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Brick.....	76,290 M.	\$1,377,239
Hollow building tile.....	1,862 tons	20,393
Clay (pottery).....	17,836 tons	46,272
Copper.....	2,936 lbs.	305
Gold.....	-----	160,440
Lead.....	2,183 lbs.	103
Mineral water.....	7,577,237 gals.	431,483
Natural gas.....	83,677,966 M. cu. ft.	5,877,085
Petroleum.....	95,906,914 bbls.	102,083,320
Silver.....	967 fine ozs.	656
Stone, miscellaneous.....	-----	2,921,561
Unapportioned *.....	-----	658,789
Total value.....	-----	\$113,577,646

* Includes cement, diatomite, dolomite, granite (volcanic rock), iodine, limestone, salt, slate, sandstone, soapstone, titanium.

MADERA

Land area: 2112 square miles.

Population: 17,152 (1930 census).

Location: East-central portion of State.

County seat: Madera.

References: State Mineralogist Report XIV : XVII : XVIII : XXIV (Oct., 1928) : XXX : XXXI : XXXIV.

Madera County was in forty-seventh place as a mineral producer for 1939, with an output of five different mineral substances valued at \$119,831, compared with \$29,916 for 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	-----	\$30,135
Silver.....	267 fine ozs.	181
Unapportioned *.....	-----	89,515
Total value.....	-----	\$119,831

* Includes garnet, stone (miscellaneous), volcanic ash.

MARIN

Land area: 529 square miles.

Population: 41,635 (1930 census).

Location: Adjoins San Francisco on the north.

County seat: San Rafael.

References: State Mineralogist Report XIV : XVII : XVIII : XXII (July, 1926) : XXIX : XXXV.

Marin County had forty-fifth place as to the value of mineral output for 1939, with four different mineral substances. The total was \$133,756, compared with \$189,843 in 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous-----	\$120,256
Unapportioned *-----	13,500
Total value-----	\$133,756

* Includes clay (pottery and shale), mineral water.

MARIPOSA

Land area: 1453 square miles.

Population: 2530 (1930 census).

Location: Most southerly of the Mother Lode counties. East central portion of State.

County seat: Mariposa.

References: State Mineralogist Report XIV : XVII : XVIII : XXIV (April, 1928) : XXXI (Jan., 1935) : XXXV.

Mariposa County is one of the distinctly *mining* counties of the State, although it stands but twenty-fifth on the list of counties in regard to the value of its mineral output for 1939, with a total of \$1,755,776, as compared with \$1,588,861 for 1938. Mariposa County is also the source of a large tonnage of limestone annually, which is otherwise credited to cement manufacture in Merced County.

Commercial production with eight different mineral substances, for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper-----	3,810 lbs.	\$396
Gold-----	-----	1,296,155
Lead-----	50,357 lbs.	2,367
Silver-----	19,418 fine ozs.	13,181
Stone, miscellaneous-----	-----	239,197
Unapportioned *-----	-----	204,480
Total value-----	-----	\$1,755,776

* Includes barite and granite.

MENDOCINO

Land area: 3452 square miles.

Population: 23,491 (1930 census).

Location: Joins Humboldt County on the south and bounded by the Pacific Ocean on the west.

County seat: Ukiah.

References: State Mineralogist Report XIV : XVII : XVIII : XIX : XX : XXXV.

Mendocino County's mineral output for 1939 was valued at \$47,691, which gave it a rank of fifty-third among the counties of the State as a mineral producer with \$46,378 for 1938.

Commercial production for 1939 included carbon dioxide natural gas and miscellaneous stone.

MERCED

Land area: 1995 square miles.

Population: 36,900 (1930 census).

Location: About the geographical center of the State.

County seat: Merced.

References: State Mineralogist Report XIV : XVII : XVIII : XXI (April, 1925) : XXXI (Jan., 1935) : XXXV.

Merced County ranked eighteenth as to the value of mineral output for 1939, with six different substances worth \$2,611,896, compared with \$2,867,501 for 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	-----	\$1,781,325
Silver.....	4,713 fine ozs.	3,219
Unapportioned *.....	-----	\$27,352
Total value.....	-----	\$2,611,896

* Includes cement, miscellaneous stone, platinum.

MODOC

Land area: 3823 square miles.

Population: 8038 (1930 census).

Location: The extreme northeast corner of the State.

County seat: Alturas.

References: State Mineralogist Report XV : XVII : XVIII : XXV (Jan., 1929) : XXX : XXXII (Oct., 1936) : XXXV.

Modoc County, in fifty-fifth place for 1939, with eight different mineral substances, reported a commercial production as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	-----	\$245
Silver.....	4 fine ozs.	3
Stone, miscellaneous.....	-----	17,449
Unapportioned *.....	-----	5,961
Total value.....	-----	\$23,658

* Includes copper, gems, mineral water, pumice, salt.

MONO

Land area: 3030 square miles.

Population: 1359 (1930 census).

Location: Is bordered by the State of Nevada on the east and is about in the central portion of the State measured on a north and south line.

County seat: Bridgeport.

References: State Mineralogist Report XV : XVII : XVIII : XX : XXIII (Oct., 1927) : XXX : XXXIV : XXXV.

Mono County, in thirty-ninth place with nine different mineral substances, reported a commercial production for 1939 as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----	-----	\$221,795
Silver-----	87,279 fine ozs.	59,243
Stone, miscellaneous-----	-----	112,534
Unapportioned *-----	-----	119,785
Total value-----	-----	\$513,357

* Includes andalusite, pumice, quicksilver, salt (medical), tungsten.

MONTEREY

Land area: 3330 square miles.

Population: 53,668 (1930 census).

Location: West-central portion of State, bordering on Pacific Ocean.

County seat: Salinas.

References: State Mineralogist Report XV : XVII : XVIII : XIX : XXI (Jan., 1925) : XXXI : XXXIV : XXXV.

Monterey County had twelve different mineral substances during 1939 having a total value of \$229,058 as compared with \$187,144 for 1938.

In forty-third place, commercial production for 1939 was as follows:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous-----	\$178,092
Unapportioned *-----	50,966
Total value-----	\$229,058

* Includes diatomite, dolomite, gold, gypsum, natural gas, petroleum, quicksilver, salt, sandstone, silver.

NAPA

Land area: 783 square miles.

Population: 22,832 (1930 census).

Location: Directly north of San Francisco Bay—one of the 'bay counties.'

County seat: Napa.

References: State Mineralogist Report XIV : XVII : XVIII : XX : XXV (April, 1929) : XXXV.

In 1939 the value of Napa County's mineral output was \$714,895 placing it in thirty-fourth place on the list of counties, as compared with \$637,963 for 1938.

With ten different mineral substances, commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper.....	9,667 lbs.	\$1,005
Gold.....		115,710
Mineral water.....	94,750 gals.	12,650
Quicksilver.....	691 flasks	71,823
Silver.....	291,248 fine ozs.	197,696
Unapportioned *.....		316,011
Total value.....		\$714,895

* Includes gems (onyx), pumice, sandstone, stone (miscellaneous).

NEVADA

Land area: 974 square miles.

Population: 10,589 (1930 census).

Location: North of Lake Tahoe on the eastern border of the State.

County seat: Nevada City.

References: State Mineralogist Report XVI : XVII : XVIII : XIX : XX : XXVI (April, 1930) : XXXI : XXXII : XXXV.

Nevada County, one of the mountain counties of California, for some years alternated with Amador in the gold lead, but both were passed by Yuba in 1918-1921, also 1923. In 1922, 1924, 1929 to 1938, Nevada led all counties in gold output, though it held third place in 1925 and 1928, and second place in 1926 and 1927. Nevada County stands eighth on the list of counties in regard to value of its mineral output for 1939 with nine different mineral substances worth \$11,468,556, as compared with \$11,667,896 for 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper.....	27,113 lbs.	\$2,820
Gold.....		11,155,655
Lead.....	39,921 lbs.	1,876
Silver.....	410,826 fine ozs.	278,864
Stone, miscellaneous.....		21,446
Unapportioned*.....		7,895
Total value.....		\$11,468,556

* Includes barite, granite, platinum.

ORANGE

Land area: 795 square miles.

Population: 118,611 (1930 census).

Location: Southwest portion of the State, bordering Pacific Ocean.

County seat: Santa Ana.

References: State Mineralogist Report XV : XVII : XVIII : XIX : XX : XXI (Jan., 1925) : XXXI : XXXV.

Orange County, in fifth place as to value of mineral output for 1939, produced fourteen mineral substances, worth \$18,850,782, compared with \$21,601,082 in 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery).....	25,599 tons	\$108,738
Natural Gas.....	17,445,378 M. cu. ft.	1,185,021
Petroleum.....	18,314,989 gals.	17,434,038
Stone, miscellaneous.....	-----	95,038
Unapportioned*.....	-----	27,947
Total value.....	-----	\$18,850,782

* Includes brick, copper, gold, lead, quicksilver, salt, silica, silzer, zinc.

PLACER

Land area: 1395 square miles.

Population: 24,442 (1930 census).

Location: Eastern border of State directly west of Lake Tahoe.

County seat: Auburn.

References: State Mineralogist Report XV : XVII : XVIII : XIX : XX : XXIII (July, 1937) : XXXI : XXXII (Jan., 1936).

Placer County, in twenty-sixth place, with eleven different mineral substances, had a commercial production for 1939 as follows, compared with \$2,020.042 for the previous year:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery).....	65,322 tons	\$91,081
Copper.....	5,719 lbs.	595
Gold.....	-----	1,533,945
Lead.....	26,409 lbs.	1,241
Silver.....	54,235 fine ozs.	36,814
Stone, miscellaneous.....	-----	20,880
Unapportioned*.....	-----	26,182
Total value.....	-----	\$1,710,738

* Includes brick and hollow building tile, granite, mineral water, platinum.

PLUMAS

Land area: 2594 square miles.

Population: 7909 (1930 census).

Location: Northeastern border of State, south of Lassen County.

County seat: Quincy.

References: State Mineralogist Report XVI : XVII : XVIII : XIX : XX : XXIV (Oct., 1928) : XXIX : XXX : XXXIII (April, 1937).

Plumas County's mineral output for 1939 with eight different mineral substances was valued at \$2,265,956, as compared with \$878,277 for 1938.

In twentieth place, commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper.....	8,051,286 lbs.	\$837,344
Gold.....	-----	1,266,335
Silver.....	194,578 fine ozs.	132,077
Stone, miscellaneous.....	-----	29,778
Unapportioned*.....	-----	422
Total value.....	-----	\$2,265,956

* Includes chromite, lead, platinum.

RIVERSIDE

Land area: 7240 square miles.

Population: 82,078 (1930 census).

Location: Southern portion of State.

County seat: Riverside.

References: State Mineralogist Report XV : XVII : XVIII : XX : XXV (Oct., 1929) : XXX : XXXI : XXXIV : XXXV.

Riverside is the fourth county in the State in size and the fifteenth in regard to the total value of mineral output for 1939. Within its borders are included mountain, desert, and agricultural land. In point of variety Riverside County showed fourteen different mineral substances commercially produced in 1939 with a total value of \$3,187,902 as compared with the 1938 output which was valued at \$3,306,793.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery)-----	59,030 tons	\$115,120
Copper-----	68,683 lbs.	7,143
Gold-----		94,395
Lead-----	634,071 lbs.	29,801
Silver-----	17,095 fine ozs.	11,604
Stone, miscellaneous-----		271,545
Unapportioned*-----		2,658,294
Total value-----		\$3,187,902

* Includes brick and hollow building tile, cement, gypsum, granite, limestone, mineral water, silica (glass sand).

SACRAMENTO

Land area: 983 square miles.

Population: 141,915 (1930 census).

Location: North-central portion of State.

County seat: Sacramento.

References: State Mineralogist Report XV : XVII : XVIII : XX : XXI (Jan., 1925) : XXXI.

Sacramento stands tenth among the counties of the State as a mineral producer; the output, principally gold, for 1939 being valued at \$5,875,597, as compared with the 1938 production worth \$4,467,487. In regard to gold output alone, this county ranks second, being exceeded by Nevada, the Sacramento product coming from the dredges. With ten mineral substances, commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----		\$5,374,935
Silver-----	7,519 fine ozs.	5,104
Stone, miscellaneous-----		358,557
Unapportioned*-----		117,001
Total value-----		\$5,875,597

* Includes brick and hollow building tile, clay (pottery), granite, natural gas, paving blocks, platinum.

SAN BENITO

Land area: 1392 square miles.

Population: 11,310 (1930 census).

Location: West-central portion of State.

County seat: Hollister.

References: State Mineralogist Report XV : XVII : XVIII :
XX : XXII (April, 1926) : XXXIV : XXXV.

San Benito County ranked thirty-eighth among the counties in regard to the value of total mining production for 1939, having an output worth \$547,093 as compared with \$527,192 for the previous year.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Quicksilver.....	3,860 flasks	\$360,567
Unapportioned*.....	-----	186,526
Total value.....	-----	\$547,093

* Includes bentonite, dolomite, mineral water, stone (miscellaneous).

SAN BERNARDINO

Land area: 20,157 square miles.

Population: 133,827 (1930 census).

Location: Southeastern portion of State.

County seat: San Bernardino.

References: State Mineralogist Report XV : XVII : XVIII :
XIX : XXVI (July, 1930) : XXVII (July, 1931) : XXX :
XXXIV : XXXV.

San Bernardino, by far the largest county in the State in area, ranked seventh in regard to the value of mineral output for 1939, with a total of \$14,664,598, as compared with \$16,752,866, the total for 1938.

San Bernardino, for several years (except for 1918) had led all other counties in the State in point of variety of minerals, producing commercially in 1939 a total of twenty-seven different substances.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery).....	8,924 tons	\$44,008
Copper.....	43,133 lbs.	4,486
Gold.....	-----	372,820
Lead.....	62,389 lbs.	2,932
Silver.....	189,377 fine ozs.	128,547
Stone, miscellaneous.....	-----	173,963
Unapportioned*.....	-----	13,937,842
Total value.....	-----	\$14,664,598

* Includes antimony, bentonite, borates, brick, calcium chloride, cement, ganister (used in brick), marble, iron ore, lime, limestone, lithia, mineral water, petroleum, potash, salt, soda, strontium, talc, tungsten, zinc.

SAN DIEGO

Land area: 4221 square miles.

Population: 209,477 (1930 census).

Location: Extreme southwest corner of State.

County seat: San Diego.

References: State Mineralogist Report XIV : XVII : XVIII : XIX : XX : XXI (July, 1925) : XXX : XXXV (Jan., 1939).

San Diego County ranked thirty-seventh in the total value of its mineral output for the year 1939 with fourteen different mineral substances on the commercial list. The value for 1939 was \$633,147 as compared with the 1938 output worth \$535,722.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery)-----	1,126 tons	\$5,386
Gold-----	-----	14,630
Mineral water-----	141,745 gals	5,394
Silver-----	245 fine ozs.	166
Stone, miscellaneous-----	-----	358,625
Unapportioned*-----	-----	248,946
Total value-----	-----	\$633,147

* Includes brick and hollow building tile, bromine, feldspar, gems (tourmaline, kyanite and quartz crystals), granite, magnesium salts, salt, silica (quartz).

SAN FRANCISCO

Land area: 46½ square miles.

Population: 637,212 (1930 census).

County seat: San Francisco.

References: State Mineralogist Report XVII : XVIII : XX : XXV (April, 1929) : XXXV.

Surprising as it may appear at first glance, San Francisco County is listed among the mineral-producing sections of the State, actual production consisting mainly of crushed rock, sand, gravel, mineral water and gold and silver from beach sands.

In fifty-second place, commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----	--	\$7,810
Silver-----	18 fine ozs.	12
Unapportioned*-----	--	44,817
Total value-----	-----	\$52,669

* Includes mineral water, platinum, stone (miscellaneous).

SAN JOAQUIN

Land area: 1448 square miles.

Population: 102,871 (1930 census).

Location: Central portion of State.

County seat: Stockton.

References: State Mineralogist Report XIV : XVII : XVIII : XXI (April, 1925).

San Joaquin County reported a mineral production for 1939 having a total value of \$1,104,898, as compared with \$781,907 for 1938. In twenty-ninth place, commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Brick and hollow building tile.....	-----	\$57,394
Gold.....	-----	66,185
Natural gas.....	10,432,837 M. cu. ft.	834,694
Silver.....	212 fine ozs.	144
Stone, miscellaneous.....	-----	146,369
Other minerals.....	-----	112
Total value.....	-----	\$1,104,898

SAN LUIS OBISPO

Land area: 3334 square miles.

Population: 29,617 (1930).

Location: Bordered by Kern County on the east and the Pacific Ocean on the west.

County seat: San Luis Obispo.

References: State Mineralogist Report XV : XVII : XVIII : XXI (Oct., 1925) : XXXI (Oct., 1935) : XXXV.

The total value of the mineral production of San Luis Obispo County in 1939, with eleven different mineral substances, was \$174,124 as compared with \$242,500 in 1938.

In forty-fourth place, commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	-----	\$490
Quicksilver.....	276 flasks	26,587
Stone, miscellaneous.....	---	22,407
Unapportioned*.....	---	124,640
Total value.....	-----	\$174,124

* Includes brick and hollow building tile, clay (oil well drilling mud), limestone, mineral water petroleum, volcanic ash, marble (limestone used for building stone).

SAN MATEO

Land area: 447 square miles.

Population: 77,338 (1930 census).

Location: Peninsula, adjoined by San Francisco on the north.

County seat: Redwood City.

References: State Mineralogist Report XVII : XVIII : XXV : (April, 1929) : XXIX : XXXV.

San Mateo County had a mineral output in 1939 of seven different substances, having a total value of \$2,418,895 as compared with the 1938 production worth \$2,026,217.

In nineteenth place, commercial production for 1939 was as follows:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous.....	\$65,392
Unapportioned*.....	2,353,503
Total value.....	\$2,418,895

* Includes cement, limestone (shells), magnesium salts, petroleum, salt.

SANTA BARBARA

Land area: 2740 square miles.

Population: 65,075 (1930 census).

Location: Southwestern portion of State, adjoining San Luis Obispo on the south.

County seat: Santa Barbara.

References: State Mineralogist Report XV : XVII : XVIII : XIX : XXI (Oct., 1925) : XXXII : XXXV.

Santa Barbara County owes its position of ninth place in the State in regard to its mineral output to the presence of productive oil fields within its boundaries. The total value of its mineral production during the year 1939 was \$8,911,006, as compared with the 1938 output of \$10,683,722.

With nine different substances, commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Natural gas-----	4,594,932 M. cu. ft.	\$307,732
Petroleum-----	8,944,217 bbls.	7,423,000
Quicksilver-----	74 flasks	6,876
Stone, miscellaneous-----	-----	70,326
Unapportioned*-----	-----	1,103,072
Total value-----	-----	\$8,911,006

* Includes bituminous rock, brick and hollow building tile, clay (pottery), diatomite, marble (limestone used for building stone).

SANTA CLARA

Land area: 1328 square miles.

Population: 144,921 (1930 census).

Location: West-central portion of State.

County seat: San Jose.

References: State Mineralogist Report XVII : XVIII : XX : XXVI (Jan., 1930) : XXIX : XXXV.

Santa Clara County reported a mineral output for 1939 of \$716,346, as compared with \$624,463, the figure for 1938.

In thirty-third place with seven mineral substances, commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Limestone (shells)-----	59,151 tons	\$117,763
Quicksilver-----	252 flasks	26,098
Stone, miscellaneous-----	-----	203,978
Unapportioned*-----	-----	368,507
Total value-----	-----	\$716,346

* Includes brick, clay (pottery), magnesite, petroleum.

SANTA CRUZ

Land area: 435 square miles.

Population: 37,405 (1930 census).

Location: Bordering Pacific Ocean, just south of San Mateo County.

County seat: Santa Cruz.

References: State Mineralogist Report XVII : XVIII : XXII (Jan., 1926) : XXIX.

The mineral output of Santa Cruz County, a portion of which is itemized below, amounted to a total of \$3,140,742 for 1939, giving the

county a standing of sixteenth among all others in the State in this regard. The 1938 figure was \$1,907,188.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	-----	\$70
Limestone.....	34,873 tons	47,529
Stone, miscellaneous.....	-----	305,417
Unapportioned*.....	-----	2,787,726
Total value.....	-----	\$3,140,742

* Includes bituminous rock, cement, iron ore, lime.

SHASTA

Land area: 3858 square miles.

Population: 13,925 (1930 census).

Location: North-central portion of State.

County seat: Redding.

References: State Mineralogist Report XIV : XVII : XVIII : XIX : XXII (April, 1926) : XXIX (Jan., April, 1933) : XXX : XXXIV : XXXV (April, 1939).

Shasta County stood twenty-third in California among the mineral-producing counties in 1939, with an output valued at \$2,058,547, as compared with 1938 production worth \$1,791,727.

With nine mineral substances, commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	-----	\$1,566,810
Lead.....	3,790 lbs.	178
Silver.....	34,573 fine ozs.	23,468
Stone, miscellaneous.....	-----	255,839
Unapportioned*.....	-----	212,252
Total value.....	-----	\$2,058,547

* Includes copper, granite, platinum, pyrite.

SIERRA

Land area: 923 square miles.

Population: 2419 (1930 census).

Location: Eastern border of State just north of Nevada County.

County seat: Downieville.

References: State Mineralogist Report XVI : XVII : XVIII : XX : XXV (April, 1929) : XXXI.

Sierra County reported a mineral production of \$871,212 in 1939, which was mainly gold, as compared with the 1938 output worth \$905,237.

In thirty-first place, commercial production for 1939, was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	-----	\$864,430
Lead.....	4,752 lbs.	223
Silver.....	4,680 fine ozs.	3,177
Stone, miscellaneous.....	-----	3,366
Other minerals.....	-----	16
Total value.....	-----	\$871,212

SISKIYOU

Land area: 6256 square miles.

Population: 25,505 (1930 census).

Location: Extreme north-central portion of State, next to Oregon boundary.

County seat: Yreka.

References: State Mineralogist Report XIV : XVII : XVIII : XIX : XX : XXI (Oct., 1925) : XXVIII (Jan., 1931) : XXIX : XXX : XXXI (July, 1935) : XXXIV : XXXV.

Siskiyou, fifth county in California in regard to size, located in highly mineralized and mountainous country, ranks twenty-fourth in regard to mineral output with nine mineral substances for 1939. The 1938 production was valued at \$1,510,815.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	-----	\$1,708,840
Pumice.....	701 tons	2,888
Silver.....	7,615 fine ozs.	5,169
Stone, miscellaneous.....	----	99,906
Unapportioned*.....	----	30,884
Total value.....	-----	\$1,847,687

* Includes chromite, mineral water, platinum, tube mill pebbles.

SOLANO

Land area: 822 square miles.

Population: 40,807 (1930 census).

Location: Touching San Francisco Bay on the northeast.

County seat: Fairfield.

References: State Mineralogist Report XIV : XVII : XXIII (April, 1927) : XXXV.

Solano, while mostly valley land, produced mineral substances during the year 1939 to the total value of \$640,024, ranking in thirty-sixth place among the counties of the State, compared with the 1938 output worth \$431,677.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Natural gas.....	6,608,782 M. cu. ft.	\$604,868
Unapportioned*.....	-----	35,156
Total value.....	-----	\$640,024

* Includes quicksilver, stone (miscellaneous), travertine.

SONOMA

Land area: 1577 square miles.

Population: 62,248 (1930 census).

Location: South of Mendocino County, bordering on the Pacific Ocean.

County seat: Santa Rosa.

References: State Mineralogist Report XIV : XVII : XVIII : XXII (July, 1926) : XXXV.

Sonoma County ranked forty-second among the counties of California during 1939 with a mineral output valued at \$329,063, as compared with \$232,495, the 1938 figure.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Quicksilver-----	255 flasks	\$27,212
Mineral water-----	53,860 gals.	6,949
Stone, miscellaneous-----		284,616
Unapportioned*-----		10,292
Total value-----		\$329,069

* Includes clay (pottery), granite (volcanic tuft).

STANISLAUS

Land area: 1450 square miles.

Population: 56,624 (1930 census).

Location: Center of State, bounded on south by Merced County.

County seat: Modesto.

References: State Mineralogist Report XIV : XVII : XVIII :
XXI (April, 1925) : XXXV.

Gold has usually been the chief mineral product of Stanislaus County, but it was exceeded in 1918-1919 by manganese, and in 1921-1923 and 1925-1930 by miscellaneous stone. This county for 1939 ranked thirtieth in the State in regard to minerals, with an output valued at \$1,069,730, as compared with \$845,523 in 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----		\$762,685
Silver-----	1,748 fine ozs.	1,187
Stone, miscellaneous-----		134,276
Unapportioned *-----		171,582
Total value-----		\$1,069,730

* Includes clay (pottery), magnesite, platinum.

SUTTER

Land area: 608 square miles.

Population: 14,618 (1930 census).

Location: Bounded by Butte County on the north and Sacramento on the south.

County seat: Yuba City.

References: State Mineralogist Report XV : XVII : XVIII.

Sutter is one of only two counties in the State which for a number of years reported no commercial output of some kind of mineral substance. In 1917 some crushed rock was taken out, from the Marysville Buttes, also in 1925-1928, and 1937-1938.

There has been some utilization of natural gas and clay. Coal is found here, but no deposits of it have been placed on a productive basis. During 1939 there was a commercial output of pottery clay and natural gas, having a total value of \$68,733, which ranked it forty-ninth as a mineral-producing county.

TEHAMA

Land area: 2893 miles.

Population: 13,839 (1930 census).

Location: North-central portion of the State, bounded on the north by Shasta.

County seat: Red Bluff.

References: State Mineralogist Report XV : XVII : XVIII : XIV : XXIV (July, 1928).

Tehama County stood forty-eighth among the mineral-producing counties of the State for 1939, with an output valued at \$82,094, as compared with the 1938 yield worth \$81,431.

Commercial production in 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----	-----	\$31,675
Silver-----	68 fine ozs.	46
Stone, miscellaneous-----	-----	44,956
Other minerals-----	-----	5,417
Total value-----	-----	\$82,094

TRINITY

Land area: 3166 square miles.

Population: 2811 (1930 census).

Location: Northwestern portion of State.

County seat: Weaverville.

References: State Mineralogist Report XIV : XVII : XVIII : XIX : XX : XXII (Jan., 1926) : XXIX (Jan., April, 1933) : XXX : XXXIV : XXXV.

Trinity County's output of minerals was valued at \$1,514,951 for 1939, as compared with the 1938 figure of \$1,493,132, mainly due to gold which gives the county a rank of twenty-eighth for the year.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----	-----	\$1,488,550
Silver-----	4.679 fine ozs.	3,176
Stone, miscellaneous-----	-----	16,177
Unapportioned *-----	-----	7,048
Total value-----	-----	\$1,514,951

* Includes copper, platinum, quicksilver.

TULARE

Land area: 4856 square miles.

Population: 77,375 (1930 census).

Location: Bounded by Inyo on the east, Kern on the south, Fresno on the north.

County seat: Visalia.

References: State Mineralogist Report XV : XVII : XVIII : XX.

Tulare County stands fortieth on the list of mineral producing counties for 1939, with eight different mineral substances, having a total value of \$452,547, as compared with \$273,199, the 1938 figure.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	-----	\$3,255
Natural gas.....	1,612,321 M. cu. ft.	117,870
Silver.....	44 fine ozs.	30
Stone, miscellaneous.....	-----	46,983
Unapportioned *.....	-----	284,409
Total value.....	-----	\$452,547

* Includes brick and hollow building tile, petroleum, tungsten.

TUOLUMNE

Land area: 2190 square miles.

Population: 9239 (1930 census).

Location: East-central portion of State—Mother Lode District.

County seat: Sonora.

References: State Mineralogist Report XIV : XVII : XVIII : XIX : XX : XXIV (Jan., 1928) : XXXIV : XXXV.

Tuolumne County ranks thirty-fifth among the counties of the State relative to its total value of mineral output for 1939, with fourteen different substances. This county ranks first as a producer of marble in the State. The mineral production for 1939 was valued at \$669,844, as compared with \$1,130,263 for 1938.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper.....	9,860 lbs.	\$1,025
Gold.....	-----	422,240
Silver.....	3,034 fine ozs.	2,059
Stone, miscellaneous.....	-----	25,277
Unapportioned *.....	-----	219,243
Total value.....	-----	\$669,844

* Includes chromite, lead, dolomite, granite, lime, limestone, marble, platinum, slate.

VENTURA

Land area: 1878 square miles.

Population: 51,577 (1930 census).

Location: Southwestern portion of State, bordering on Pacific Ocean.

County seat: Ventura.

References: State Mineralogist Report XV : XVII : XVIII : XX : XXI : XXVIII (July-Oct., 1932).

Ventura is fourth in the State in respect to the value of its mineral output for 1939. The 1939 mineral production was worth \$20,773,214, as compared with the 1938 output valued at \$21,966,416.

With eight different mineral substances, commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Natural gas.....	41,098,418 M. cu. ft.	\$2,038,936
Petroleum.....	16,866,086 gals.	18,530,769
Stone, miscellaneous.....	-----	179,844
Unapportioned *.....	-----	23,665
Total value.....	-----	\$20,773,214

* Includes clay (oil well drilling mud), gold, granite (volcanic tuft), silver.

YOLO

Land area: 1017 square miles.

Population: 23,618 (1930 census).

Location: Sacramento Valley, bounded by Sutter on the east and Colusa on the north.

County seat: Woodland.

References: State Mineralogist Report XIV : XVII : XVIII : XXXV.

Yolo County, in fiftieth place, had a commercial production for 1939 as follows, compared with \$48,232 the preceding year:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous.....	\$61,056
Unapportioned *.....	2,087
Total value.....	\$63,143

* Includes natural gas and quicksilver.

YUBA

Land area: 639 square miles.

Population: 11,327 (1930 census).

Location: Lies west of Sierra and Nevada counties; south of Plumas.

County seat: Marysville.

References: State Mineralogist Report XV : XVII : XVIII : XX : XXVI (July, 1930) : XXXI.

Yuba County ranked fourteenth among the counties of the State as a mineral producer and sixth in respect to gold, which is obtained mainly by dredges. The 1938 output was valued at \$2,633,138.

Commercial production for 1939 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold.....	-----	\$3,037,965
Silver.....	9,170 fine ozs.	6,224
Stone, miscellaneous.....	-----	147,780
Other minerals.....	----	87
Total value.....	-----	\$3,192,056

CHAPTER VIII

DIRECTORY OF PRODUCERS OF METALLIC AND NON-METALLIC MINERALS IN CALIFORNIA 1939

NOTE.—The producers of natural gas and petroleum will be found in the Quarterly Summary of Operations, California Oil Fields, for October, November, and December, 1939 (Vol. 25, No. 2).

STONE, MISCELLANEOUS

Under the heading of 'miscellaneous stone' there are four divisions—crushed rock, grinding mill pebbles, paving blocks, and sand and gravel. Crushed rock includes crushed rock that is used in macadam, ballast and for concrete; also rock used for rubble and riprap.

NOTE.—The California State Highway Commission, the various counties, U. S. Forest Service and U. S. Bureau of Public Roads produce both crushed rock and sand and gravel in various places in the State used in construction and maintenance of highways, but not specified in this listing.

APPENDIX

PUBLIC RESOURCES CODE

An act to establish a Public Resources Code, thereby consolidating and revising the law relating to natural resources, the conservation, utilization, and supervision thereof, and matters incidental thereto, and to repeal certain acts and parts of acts specified herein.

Chapter 93 (Stat. 1939.)

The people of the State of California do enact as follows:

GENERAL PROVISIONS.

1. This act shall be known as the Public Resources Code.
2. The provisions of this code, in so far as they are substantially the same as existing provisions relating to the same subject matter shall be construed as restatements and continuations thereof and not as new enactments.
3. All persons who, at the time this code goes into effect, hold office under any of the acts repealed by this code, which offices are continued by this code, continue to hold the same according to the former tenure thereof.
4. No action or proceeding commenced before this code takes effect, and no right accrued, is affected by the provisions of this code, but all procedure thereafter taken therein shall conform to the provisions of this code so far as possible.
5. Unless the context otherwise requires, the general provisions hereinafter set forth shall govern the construction of this code.
6. Division, part, chapter, article, and section headings contained herein shall not be deemed to govern, limit, modify or in any manner affect the scope, meaning, or intent of the provisions of any division, part, chapter, article, or section hereof.
7. Whenever, by the provisions of this code, an administrative power is granted to a public officer or a duty imposed upon such officer, the power may be exercised or the duty performed by a deputy of the officer or by a person authorized pursuant to law.
8. Writing includes any form of recorded message capable of comprehension by ordinary visual means. Whenever any notice, report, statement or record is required by this code, it shall be made in writing in the English language.
9. Whenever any reference is made to any portion of this code or of any other law of this State, such reference shall apply to all amendments and additions thereto now or hereafter made.
10. "Section" means a section of this code unless some other statute is specifically mentioned.
11. The present tense includes the past and future tenses; and the future the present.
12. The masculine gender includes the feminine and neuter.
13. The singular number includes the plural, and the plural the singular.
14. "County" includes "city and county."
15. "Shall" is mandatory and "may" is permissive.
16. "Oath" includes affirmation.
17. "Signature" or "subscription" includes mark when the signer or subscriber can not write, such signer's or subscriber's name being written near the mark by a witness who writes his own name near the signer's or subscriber's name; but a signature or subscription by mark can be acknowledged or can serve as a signature or subscription to a sworn statement only when two witnesses so sign their own names thereto.
18. If any provision of this code, or the application thereof to any person or circumstances, is held invalid the remainder of the code, and the application of its provisions to the other persons or circumstances, shall not be affected thereby.

DIVISION 1. THE DEPARTMENT OF NATURAL RESOURCES.

501. There is in the State government a Department of Natural Resources. The department shall be conducted under the control of an executive officer known as the Director of Natural Resources. The director shall be appointed by and hold office at the pleasure of the Governor and shall receive a salary of six thousand dollars a year.

502. Except as in this division otherwise provided, the provisions of article II, Chapter III, Title I. Part III of the Political Code shall govern and apply to the conduct of the Department of Natural Resources in every respect the same as if such provisions were herein set forth at length, and wherever in that article the term "head of the department" or similar designation occurs, it shall for the purposes of this division mean the Director of Natural Resources.

503. For the purposes of administration the department shall be organized by the director, subject to the approval of the Governor, in such manner as he deems necessary properly to segregate and conduct the work of the department. The director may appoint, in accordance with the civil service and other provisions of law, such deputies, officers, and other expert and clerical assistants as may be necessary.

504. The work of the department shall be divided into at least four divisions, known as Division of Forestry, the Division of Parks, The Division of Fish and Game, and The Division of Mines.

505. The Division of Forestry shall be administered through a chief who shall be known as the State Forester. He shall be a technically trained forester, appointed by the director upon nomination by the State Board of Forestry. General policies for the guidance of the Division of Forestry shall be determined by a State Board of Forestry which shall consist of seven members appointed by and holding office at the pleasure of the Governor. Of the seven members one shall be familiar with the pine timber industry, one with the redwood industry, one with live stock industry, one with general agriculture, and one with the problems of water conservation.

506. The Division of Parks shall be administered through a chief who shall be appointed by the director upon nomination by the State Park Commission. General policies for the administration of the State park system shall be determined by the State Park Commission which shall consist of five members appointed by and holding office at the pleasure of the Governor.

507. The Division of Mines shall be administered through a chief who shall be known as the State Mineralogist. He shall be a technically trained mining engineer, appointed by the director upon nomination by the State Mining Board. General policies for the guidance of the Division of Mines shall be determined by a State Mining Board, which shall consist of five members appointed by and holding office at the pleasure of the Governor.

508. The Division of the Department of Natural Resources for the supervision of oil and gas shall be in charge of a chief, known as the State Oil and Gas Supervisor.

509. The salaries of the chiefs of the Divisions of Forestry and Parks shall be fixed by the director with the approval of the Governor. The director and the chief of each division, before entering upon his duties, shall execute and deliver to the State an official bond in the sum of twenty-five thousand dollars conditioned upon the faithful performance of his duties.

510. The members of the Board of Forestry and the State Park Commission shall serve without compensation, but shall be entitled to their actual necessary expenses incurred in the performance of their duties.

512. The Department of Natural Resources may expend the money in any appropriation or in any special fund in the State treasury made available by law for the administration of the statutes the administration of which is committed to the department, or for the use, support, or maintenance of any board, bureau, commission, department, office, or officer whose duties, powers, and functions have been transferred to and conferred upon the department. Such expenditures by the department shall be made in accordance with law in carrying out the purposes for which the appropriations were made or the special funds created.

513. The department shall have possession and control of all records, books, papers, offices, equipment, supplies, moneys, funds, appropriations, land and other property, real or personal held for the benefit or use of all bodies, offices, and

officers whose duties, powers, and functions have been transferred to and conferred upon the department.

514. Nothing in this code is intended to supersede, modify or change the effect of the enactment of section 373g of the Political Code, and wherever in this code reference is made to any officer or agency of the Department of Natural Resources, it is made in the sense and with the same legal effect as was attributable thereto in the statute whence derived and which would continue to be so attributable but for the adoption of this code.

DIVISION II. MINES AND MINING.

CHAPTER 1. DEFINITIONS.

2001. Unless the context otherwise requires, the definitions hereinafter set forth shall govern the construction of Division II of this code.

2002. "Department" in reference to the government of this State, means the Department of Natural Resources.

2003. "Division" in reference to the government of this State, means the Division of Mines in the Department of Natural Resources.

2004. "Person" includes any individual, firm, association, corporation, or any other group or combination acting as a unit.

CHAPTER 2. THE DIVISION OF MINES.

2200. For the purposes of this chapter "mine" includes all mineral bearing properties of whatever kind or character, whether underground, quarry, pit, well, spring or other source from which any mineral substance is or may be obtained. "Mineral" for the purposes of this chapter includes all mineral products both metallic and nonmetallic, solid, liquid or gaseous, and mineral waters of whatever kind or character.

2201. The State Mineralogist shall employ competent geologists, field assistants, qualified specialists, and office employees when necessary in the execution of the plans and operations of the division under this chapter and shall fix their compensation.

2202. The State Mineralogist shall maintain offices, and a museum, library, and laboratory in San Francisco for the purposes provided in this chapter.

2203. The State Mineralogist shall make a biennial report to the Governor on or before the fifteenth day of September next preceding the regular session of the Legislature.

2204. The State Mineralogist may receive on behalf of this State, for the use and benefit of the division, gifts, bequests, devices, and legacies of real or other property and may use the same in accordance with the wishes of the donors. If no instructions are given by the donors, the State Mineralogist shall manage, use, and dispose of the gifts, bequests, and legacies for the best interests of the division and in such manner as he may deem proper.

2205. The State Mineralogist shall:

(a) Make, facilitate, and encourage special studies of the mineral resources and mineral industries of the State.

(b) Collect statistics concerning the occurrence and production of the economically important minerals and the methods pursued in making their valuable constituents available for commercial use.

(c) Make a collection of typical geological and mineralogical specimens, especially those of economic and commercial importance such collection constituting the museum of the division.

(d) Provide a library of books, reports, and drawings bearing upon the mineral industries, the sciences of mineralogy and geology, and the arts of mining and metallurgy, such library constituting the library of the division.

(e) Make a collection of models, drawings, and descriptions of the mechanical appliances used in mining and metallurgical processes.

(f) Preserve and so maintain such collections and library as to make them available for reference and examination, and open to public inspection at reasonable hours.

(g) Maintain, in effect, a bureau of information concerning the mineral industry of this State to consist of such collections and library, and arrange, classify,

catalogue, and index the data therein contained, in a manner to make the information available to those desiring it.

(h) Issue from time to time such bulletins as he may deem advisable concerning the statistics and technology of the mineral industries of this State.

2206. The State Mineralogist may prepare a special collection of ores and minerals of California to be sent to or used at any world's fair or exposition in order to display the mineral wealth of the State.

2207. The owner, lessor, lessee, agent, manager, or other person in charge of any mine of whatever kind or character within the State shall forward to the State Mineralogist, upon his request, at his office, not later than the thirty-first day of March in each year, a detailed report upon forms which will be furnished showing the character of the mine, the number of men employed, the method of working the mine and the general condition thereof, and the total mineral production for the past year. He shall also furnish any additional information relative to such mine that the State Mineralogist may from time to time require for the proper discharge of his official duties. Any such person who fails to comply with the provisions of this section is guilty of a misdemeanor.*

2208. The State Mineralogist or a qualified assistant may at any time enter or examine any and all mines, quarries, wells, mills, reduction works, refining works, and other mineral properties or working plants in this State in order to gather data to comply with the provisions of this chapter.

2209. The State Mineralogist may fix a price upon and dispose of to the public all publications of the division, including reports, bulletins, maps, registers, or other publications. The price shall approximate the cost of publication and distribution. He may also furnish the publications of the division to public libraries without cost and may exchange publications with geological surveys, scientific societies, and other like bodies.

2210. All money received by the division from sales of publications issued by the division shall be deposited at least once each month in the State treasury to the credit of the Division of Mines revolving printing fund, which fund is continued in existence. This fund is appropriated for the use of the division, in addition to such other funds as may be appropriated, for the printing and publishing of reports, bulletins, and maps issued by the division. The State Controller may require financial reports from the division or any officer thereof.

(Added by Stats. 1939, Ch. 96, as part of codification.)

* Sec. 19 of the Penal Code of California provides: "Except in cases where a different punishment is prescribed by this code, every offense declared to be a misdemeanor is punishable by imprisonment in a county jail not exceeding six months, or by a fine not exceeding five hundred dollars, or by both."

PUBLICATIONS OF THE DIVISION OF MINES

During the past fifty-six years, in carrying out the provisions of the organic act creating the former California State Mining Bureau, there have been published many reports, bulletins and maps which go to make up a library of detailed information on the mineral industry of the State, a large part of which could not be duplicated from any other source.

One feature that has added to the popularity of the publications is that many of them have been distributed without cost to the public, and even the more elaborate ones have been sold at a price which barely covers the cost of printing.

Owing to the fact that funds for the advancing of the work of this department have usually been limited, the reports and bulletins mentioned are printed in limited editions many of which are now entirely exhausted.

Copies of such publications are available for reference, however, in the offices of the Division of Mines, in the Ferry Building, San Francisco; State Building, Los Angeles; State Office Building, Sacramento; Redding; and Division of Oil and Gas at Santa Barbara, Santa Paula, Taft, Bakersfield, Coalinga. They may also be found in many public, private and technical libraries in California and other states and foreign countries.

A catalog of all publications from 1880 to 1917, giving a synopsis of their contents, is issued as Bulletin No. 77.

Publications in stock may be obtained postpaid by addressing the San Francisco, Los Angeles or Sacramento offices and enclosing the requisite amount.

Remittances of stamps in an amount not to exceed 26 cents, currency or coin will be accepted at sender's risk. Payment is preferred in the form of money orders.

Money orders should be made payable to the Division of Mines.

NOTE.—The Division of Mines frequently receives requests for some of the early Reports and Bulletins now out of print, and it will be appreciated if parties having such publications and wishing to dispose of them will advise this office.

Write for latest revised price list.

January-April.	Gold Deposits of the Redding and Weaverville Quadrangles. Geologic Formations of the Redding-Weaverville District, Northern California. Geology of Portions of Del Norte and Siskiyou Counties. Applications of Geology to Civil Engineering. The Lakes of California. Discovery of Piedmontite in the Sierra Nevada. Tracing 'Buried River' Channel Deposits by Geomagnetic Methods. Geologic Map of Redding-Weaverville District, showing gold mines and prospects. Geologic map showing various mines and prospects of part of Del Norte and Siskiyou Counties.....	Price \$1.00, sales tax \$0.03 1.03
July-October.	Gold Resources of Kern County. Limestone Deposits of the San Francisco Region. Limestone Weathering and Plant Associations of the San Francisco Region. Booming, Death Valley National Monument, California. Placer Mining Districts, Senate Bill 480. Navigable Waters, Assembly Bill 1543.....	Price \$1.00, sales tax \$0.03 1.03
Chapters of Report XXX, 1934 (quarterly):	titled 'California Journal of Mines and Geology,' containing the following:	
January.	Resurrection of Early Surfaces in the Sierra Nevada. Geology and Mineral Resources of Northeastern Madera County. Geology and Mineral Deposits of Laurel and Convict Basins, Southwestern Mono County. Notes on Sampling as Applied to Gold Quartz Deposits....	Price \$0.60, sales tax \$0.02 .62
April-July.	Elementary Placer Mining in California and Notes on the Milling of Gold Ores.....	Price \$1.00, sales tax \$0.03 1.03
October.	Current Mining Developments in Northern California. Current Mining Activity in Southern California. Geology and Mineral Resources of the Julian District, San Diego County. Geology and Mineral Resources of Elizabeth Lake Quadrangle. Dry Placers of Northern Mojave Desert. Biennial Report of State Mineralogist. Assessment Work Within Withdrawn Areas.....	Price \$0.60, sales tax \$0.02 .62
Chapters of Report XXI, 1935 (quarterly):	titled 'California Journal of Mines and Geology,' containing the following:	
January.	Review of Gold Mining in East-Central, 1934. Current Mining Activities in the San Francisco District with Special Reference to Gold. Geological Investigation of the Clays of Riverside and Orange Counties, Southern California. Information regarding Mining Loans by the Reconstruction Finance Corporation.....	Price \$0.60, sales tax \$0.02 .62

REPORTS—Continued

		Price (including postage and sales tax)
Asterisks (**) indicate the publication is out of print.		
April.	A Geologic Section Across the Southern Peninsular Range of California. New Technique Applicable to the Study of Placers. Grubstake Permits -----	Price \$0.60, sales tax \$0.02 \$0.62
July.	Mines and Mineral Resources of Siskiyou County (with map). Dams for Hydraulic Mining Debris. Leasing System as Applied to Metal Mining. Mine Financing in California. New Laws Make Radical Change in Mining Rights-----	Price \$0.60, sales tax \$0.02 .62
October.	Mines and Mineral Resources of San Luis Obispo County. Mineral Resources of Portions of Monterey and Kings Counties. Mining Activity at Soledad Mountain and Middle Buttes—Mojave District, Kern County. Geology of a Portion of the Perris Block, Southern California. Mineral Resources of a Portion of the Perris Block, Riverside County -----	Price \$0.60, sales tax \$0.02 .62
Chapters of Report XXXII, 1936 (quarterly): titled 'California Journal of Mines and Geology,' containing the following:		
January.	Gold Mines of Placer County, including Drag-line Dredges. Geologic Report on Borax Lake, California-----	Price \$0.60, sales tax \$0.02 .62
April.	Geology, Mining and Processing of Diatomite at Lompoc, Santa Barbara County. Essentials in Developing and Financing a Prospect into a Mine. Gold-bearing Veins of Meadow Lake District, Nevada County. Semi-Precious Gem Stone Collection in Division Museum--	Price \$0.60, sales tax \$0.02 .62
July.	Mines and Mineral Resources of Calaveras County. Mining in California by Power Shovel. Assessment Work on Mining Claims Within Withdrawn Areas. Joshua Tree National Monument. Cost of Producing Quicksilver at a California Mine in 1931-1932. The Age of Mineral Utilization-----	Price \$0.60, sales tax \$0.02 .62
October.	Mineral Resources of Lassen and Modoc Counties. Mechanics of Lone Mountain Landslides, San Francisco. Biennial Report of the State Mineralogist, Properties and Industrial Applications of Opaline Silica -----	Price \$0.60, sales tax \$0.02 .62
Chapters of Report XXXIII, 1937 (quarterly): titled 'California Journal of Mines and Geology,' containing the following:		
January.	Source Data of the Geologic Map of California, January, 1937. The Geology of Quicksilver Ore Deposits. Prospecting for Lode Gold -----	Price \$0.60, sales tax \$0.02 .62
April.	Mineral Resources of Plumas County (with Geologic Map). List of preferred mineral names. New Placer Mining Debris Law -----	Price \$0.60, sales tax \$0.02 .62
July.	Mineral Resources of Los Angeles County (with map showing principal Mines and Oil Fields.) Geology and mineral deposits of the Western San Gabriel Mountains, Los Angeles County-----	Price \$0.60, sales tax \$0.02 .62
October.	Mineral Resources of the Resting Springs Region, Inyo County. Paleozoic Section in the Nopah and Resting Springs Mountains, Inyo County, California. Native Arsenic from Grass Valley, California--	Price \$0.60, sales tax \$0.02 .62
Chapters of Report XXXIV, 1938 (quarterly): titled 'California Journal of Mines and Geology,' containing the following:		
January.	Mineral Development and Mining Activity in Southern California during the year 1937. Doing Something About Earthquakes. Gold and Petroleum in California. Gem Minerals of California, Lapidary Art -----	Price \$0.60, sales tax \$0.02 .62
April.	Gold dredging in Shasta, Siskiyou and Trinity Counties; Geology of the Central Santa Monica Mountains; Marketing Mica -----	Price \$0.60, sales tax \$0.02 .62
July.	El Dorado County, Mineral High-Lights of California; Strategic Minerals of California; Cyanide Treatment of Gossan at Mountain Copper Co.; Submarine Canyons off the California Coast-----	Price \$0.60, sales tax \$0.02 .62

Bulletin No. 116. California Mineral Production and Directory of Mineral Producers for 1937-----	Price \$0.80, sales tax \$0.02	.82
Bulletin No. 117. California Mineral Production and Directory of Mineral Producers for 1938 (In press)-----	Price \$0.80, sales tax \$0.02	.82
Bulletin No. 118. Geologic Formations and Economic Development of the Oil and Gas Industry of California, by O. P. Jenkins and others		
*Part One—Development of the Industry		
Part Two—Geology of California and the Occurrence of Oil and Gas		
Part Three—Descriptions of Individual Oil and Gas Fields		
Part Four—Glossaries, Bibliography, and Index		
	Subscription to four parts \$3.00, sales tax \$0.09	3.09
Bulletin No. 119. Mineral Production of California for 1939, and Directory of Producers-----	Price \$0.80, sales tax \$0.02	.82

PRELIMINARY REPORTS

**Preliminary Report No. 1. Notes on Damage by Water in California Oil Fields, December, 1913. By R. P. McLaughlin, 4 pp.-----		----
**Preliminary Report No. 2. Notes on Damage by Water in California Oil Fields, March, 1914. By R. P. McLaughlin, 4 pp.-----		----
Preliminary Report No. 3. Manganese and Chromium, 1917. By E. S. Boalich. 32 pp.-----		Free
**Preliminary Report No. 4. Tungsten, Molybdenum and Vanadium. By E. S. Boalich and W. O. Castello, 1918. 34 pp. Paper-----		----
**Preliminary Report No. 5. Antimony, Graphite, Nickel, Potash, Strontium and Tin. By E. S. Boalich and W. O. Castello, 1918. 44 pp. Paper-----		----
Preliminary Report No. 6. A Review of Mining in California During 1919. By Fletcher Hamilton, 1920. 43 pp. Paper-----		Free
**Preliminary Report No. 7. The Clay Industry in California. By E. S. Boalich, W. O. Castello, E. Huguenin, C. A. Logan, and W. B. Tucker, 1920. 102 pp. 24 illustrations. Paper-----		----
**Preliminary Report No. 8. A Review of Mining in California During 1921, with Notes on the Outlook for 1922. By Fletcher Hamilton, 1922. 68 pp. Paper-----		----

MINERAL ABSTRACTS

Pumice and Volcanic Ash, 50 pp.-----	Price \$0.35, sales tax \$0.01	.36
Sulphur, 23 pp.-----	Price \$0.25, sales tax \$0.01	.26
Tungsten, 33 pp.-----	Price \$0.25, sales tax \$0.01	.26

* The first part may now be obtained through subscription to all four parts.

MISCELLANEOUS PUBLICATIONS

	Price (including postage and sales tax)
Asterisks (**) indicate the publication is out of print.	
**First Annual Catalogue of the State Museum of California, being the collection made by the State Mining Bureau during the year ending April 16, 1881. 350 pp.-----	----
**Catalogue of books, maps, lithographs, photographs, etc., in the library of the State Mining Bureau at San Francisco, May 15, 1884. 19 pp.---	----
**Catalogue of the State Museum of California, Volume II, being the collection made by the State Mining Bureau from April 16, 1881, to May 5, 1884. 220 pp.-----	----
**Catalogue of the State Museum of California, Volume III, being the collection made by the State Mining Bureau from May 15, 1884, to March 31, 1887. 195 pp.-----	----
**Catalogue of the State Museum of California, Volume IV, being the collection made by the State Mining Bureau from March 30, 1887, to August 20, 1890. 261 pp.-----	----
Lakes of California-----	Price \$0.25, sales tax \$0.01 \$0.26
In lots of 50 or more, C. O. D.-----	.10
Drift Mining in California (Reprint)-----	Price \$0.25, sales tax \$0.01 .26
**Catalogue of the Library of the California State Mining Bureau, September 1, 1892. 149 pp.-----	----
**Catalogue of West North American and Many Foreign Shells with Their Geographical Ranges, by J. G. Cooper. Printed for the State Mining Bureau, April, 1894-----	----
**Report of the Board of Trustees for the four years ending September, 1900. 15 pp. Paper-----	----
Bulletin. Reconnaissance of the Colorado Desert Mining District. By Stephen Bowers, 1901. 19 pp. 2 illustrations. Paper-----	----
Price \$0.25, sales tax \$0.01	.26
Commercial Mineral Notes. A monthly mimeographed sheet, beginning April, 1923 -----	(by mail 15c annually) Free

Map No. 55—Canal, Canfield Ranch, Coles Levee, Strand, and Ten Section, Kern County-----	Price \$1.25, sales tax \$0.04	1.29
Map No. 56—Paloma, Kern County-----	Price \$1.25, sales tax \$0.04	1.29

DETERMINATION OF MINERAL SAMPLES

Samples (limited to two at one time) of any mineral found in the State may be sent to the Division of Mines for identification, and the same will be classified free of charge. No samples will be determined if received from points outside the State. It must be understood that no assays, or quantitative determinations will be made. Samples should be in lump form if possible, and marked plainly with name of sender on outside of package, etc. No samples will be received unless delivery charges are prepaid. A letter should accompany sample, giving locality where mineral was found and the nature of the information desired.

STATE OF CALIFORNIA
DEPARTMENT OF NATURAL RESOURCES

DIVISION OF MINES

CORDIALLY INVITES YOU TO VISIT
ITS VARIOUS DEPARTMENTS MAINTAINED
FOR THE PURPOSE OF FURTHERING
THE DEVELOPMENT OF THE

MINERAL RESOURCES OF CALIFORNIA

At the service of the public are the scientific reference library and reading room, the general information bureau, the laboratory for the free determination of mineral samples found in the State, and the largest museum of mineral specimens on the Pacific Coast.

The time and attention of the State Mineralogist, at well as that of his technical staff, are also at your disposal.

Office hours: 9 a.m. to 5 p.m. daily.

(Except July and August, 8 a.m. to 4 p.m. daily)

Saturday, 9 a.m. to 12 m.

WALTER W. BRADLEY,
State Mineralogist.

Third floor, Ferry Building, San Francisco, Cal.
Branch Offices: 217 W. First St., Los Angeles;
State Office Building, Sacramento; and Redding
